RICK (Old Eng. *hreac*, 'a small heap'), in husbandry, is a piled structure of hay or corn-sheaves, having an oblong plan and a top with sloping sides, which are usually covered with thatching. During the process of heaping, a tarpaulin, called a R.-cloth, is suspended from standards over the R. to protect it from rain.

RICKETTS, James B., an American general, born in New York, in 1816, and graduated from West Point in 1839. He participated in the Mexican war, and saw considerable service on the frontier. After the first battle of Bull Run (1861), he was made brigadier-general of volunteers. He was engaged at Chantilly, South Mountain, Antietam, the battles of the Wilderness, Monocacy, Opequan, Fisher's Hill, and Cedar Creek. For his gallantry he was promoted major-general.

RIES, Ferdinand, an able composer and pianist, was born in Germany, 29th November 1784. He studied at Vienna under Beethoven from 1801 to 1804, after which he achieved a great reputation as a pianist in the many countries he visited professionally. During a long residence in England (1813–24) his services as a teacher and performer were in immense demand. He composed the operas *Die Räuberbraut* (1829) and *Liska* (first produced as *The Sorceress* at the Adelphi, London, 1831), six orchestral symphonies, several overtures, a cantata, *Der Sieg des Glaubens*, nine pianoforte concerts, and many excellent pianoforte works, violin quartets, &c. He died at Frankfurt-am-Main, 13th January 1838. See Fétis, *Biogr. univ. des Musiciens* (new ed. 1878).

RIE'SI, a town of Sicily, province of Caltanisetta, 16 miles N.W. of Terranova, has large chemical works, and a trade in agricultural produce. Pop. (1874) 11,548.

RIETSCH'EL, Ernst, a famous German sculptor, born at Pulsnitz, 15th December 1804, studied at the Art Academy of Dresden, and later under Rauch in Berlin, was appointed in 1832 Art Professor in the former city, and died 21st February 1861. He had a marvelous power of combining ideality with fidelity to Nature. His masterpiece is the 'Luther Monument' at Worms; other notable works are a Pietà (Potsdam), a statue of Lessing (Brunswick), statues of Goethe and Schiller (Weimar), the relievo decorations of the Berlin opera-house, and the Dresden museum. See Oppermann's *Ernst R.* (Leips. 1863).

RIGADOON' (Fr. *rigodon*), an old merry dance in triple time performed by a man and woman, somewhat in the style of a jig.

RIOBAM'BA, a town in the S. American Republic of Ecuador, 84 miles N.E. of Guayaquil, on a plain 9600 feet above the sea-level. Pop. about 16,000. The original town of R. stood at the foot of Chimborazo, 9 miles from the site of the present town, but was destroyed by an earthquake in 1797.

RIPIE'NO (Ital. *full*), an occasional, or filling-up part in the orchestra, added when necessary to strengthen the principal or obligato instruments.

RIP'LEY, George, LL.D., an American author, born at Greenfield, Mass., October 3, 1802, educated at Harvard and Cambridge Divinity School, was a Unitarian pastor at Boston from 1828 to 1831, afterwards resided for several years in Europe, and became thoroughly acquainted with French and German literature. His chief works are *Discourses on the Philosophy of Religion* (1839); *Letters to Andrews Norton on the Latest Form of Infidelity* (1840); and *Specimens of Foreign Standard Literature* (14 vols. Boston, 1838–42). He assisted in conducting the *Dial* (1840–41); contributed to magazines, especially the *Christian Examiner*; promoted the Brook Farm Socialist experiment (1844–46); aided in editing the *Harbinger*, a Fourierite organ (1844–48); became literary editor of the New York *Tribune* (1849); brought out along with Bayard Taylor *A Handbook of Literature and the Fine Arts* (1852); and was joint editor with C. A. Dana of Appleton's *New American Cyclopædia* (New York, 16 vols. 1858–63). This was his great life-work. A new edition, made under his care, appeared in 1873–76. Died in New York City, July 4, 1880.

RISH'ANGER, William de, an English chronicler, born in 1250, became a Benedictine monk of Saint Alban's, and was appointed historiographer to Henry III. He was alive in 1322. His *Chronicle*, edited by J. O. Halliwell, was printed for the Camden Society in 1840. R. also wrote the *Gesta Edwardi Primi*, some fragmentary annals, and part of the history attributed to Walsingham. All his writings are valuable for the history of Scotland at the period of its conquest by Edward I., Scotland itself not possessing at that time any chroniclers.

RITSON, Joseph, an English antiquary, was born at Stockton in Durham, 2d October 1752, settled in London as a conveyancer, and died 3d September 1803. He was a competent scholar, but an insolent critic, and his opinions in literature were fatally perverted by pride and malignity. Yet some of his works have a permanent value. The chief are *A Collection of English Songs* (3 vols.), *The English Anthology* (3 vols.), *Robin Hood, a Collection of Ballads* (2 vols.), and *A Collection of Scotch Songs* (2 vols.).

ROANOKE COLLEGE, an educational institution of the Lutheran Church, at Salem, Va. Its principal feature is the importance attached to metaphysical studies. A large percentage of its students enter the Christian ministry.

ROB'ERTSON, Thomas William, a brilliant modern dramatist, was born at Spalding, in Lincolnshire, England, 9th Jan. 1829. He was born, as it were, on the stage; in his own phrase, 'was nursed on rose-pink and cradled in properties.' His father and mother both earned some theatrical reputation, and his sister, Madge R. (now Mrs. Kendal), subsequently became one of the brightest ornaments of the famed Haymarket company. R. himself failed as an actor in the provinces, and settled in London as a journalist in 1860. After much literary drudgery, he became dramatic critic to the *Illustrated Times*, and a contributor to the best of the lighter periodicals. Meantime he had written and translated many plays, but it was not till after many delays and disappointments that he achieved his first triumph as a dramatist on the production of *Society* at the Prince of Wales' Theater in 1865. This success he followed up with *Ours* in 1866, *Caste* in 1867, *Play* in 1868, *School* in 1869, and *M.P.* in 1870. R. died in London, 3d Feb. 1871.

ROB'INSON, Henry Crabb, F.S.A., born at Bury-St.-Edmund's, Suffolk, England, May 13, 1775, and after being articled to a lawyer at Colchester and in London, studied at Jena and other German universities (1800–5). Admitted to the 'Weimar circle,' he made the acquaintance of Goethe, Schiller, Wieland, Herder, and Madame de Staël; was *Times* correspondent in Spain during the first two years of the Peninsular War (1808–9); and on returning to London became a regular contributor, being thus brought into contact with many of the leading writers of his day. He was called to the bar (1813), and having acquired a fortune on the Norfolk circuit, retired in 1828 to private life and the society of Wordsworth, Lamb, Coleridge, Landor, and their compeers. A dissenter and a Liberal, he was one of the earliest members of the Athenæum Club, and a founder of University College, London, as also of the Flaxman Gallery. He died in London, February 5, 1867, leaving behind him a delightful Diary, which has been edited by Dr. Sadler (3 vols. 1869).

ROB'INSON, Sir Hercules George Robert, born in England, in 1824; after studying at Sandhurst, received a commission in the 87th Foot, but retired, and held various Civil Service appointments, and was a member of the Irish Poor-Law Board (1846–53). He was next successively appointed President of Montserrat (1854), Lieutenant-Governor of St. Christopher's (1855), and Governor of Hong-Kong (1859), of Ceylon (1865), and of New South Wales (1872). Having already been knighted in 1859, he was advanced to the rank of G.C.M.G. in 1875 for his services in connection with the annexation of the Fiji Islands.

ROCHAMBEAU, Jean Baptiste Donatien de Vimeur, Comte de, a French marshal, was the son of the governor of Vendôme, and was born there, 1st July 1725. Entering the army in 1742, he took part in the campaigns of Bohemia, Bavaria, and the Rhine. For his services at the siege of Namur he was made a colonel (1747). He also brilliantly distinguished himself at the siege of Maestricht. For his bravery in the expedition to Minorca he received the cross of St. Louis (1756), and was raised to the rank of brigadier. He took part in the Seven Years' War, became maréchal-de-camp and inspector of cavalry in 1761. In 1780 he came to America to assist the American colonists with an auxiliary force of 6000 men, and had a great share in the arrange-

ments that forced Lord Cornwallis to capitulate with his whole force at Yorktown, in Virginia, 19th October, 1781. On his return to France he was made governor of Picardy. In 1790 he accepted the command of the army of the North, and in 1791 was made a marshal of France. In 1791 he resigned his command, withdrew to his country estate, narrowly escaped execution by the Terrorists, received the Cross of the Legion of Honor from Napoleon, and died at Thoré, 10th May 1807. See *Memoires de R.* by Luce de Lancival (Par. 1809).

ROCHE'FORT, Henri, otherwise Le Comte Victor-Henri de Rochefort-Luçay, a French journalist and politician of the Red Republican school, was born at Paris on the 30th of January 1830, and was the son of a Legitimist Marquis, who was also a noted comic dramatist. After studying medicine for some time, R. took to literature, and, after working for some years as a *chroniqueur* on minor journals, and a contributor to comic papers, such as the *Charivari*, he became one of the principal members of the staff of *L'Evénement* and *Le Figaro*. Between 1856 and 1866, he wrote some eighteen or twenty comedies and vaudevilles, generally in collaboration with other dramatists. In 1868 the bitterness of his satirical articles in the *Figaro* upon the Imperial *régime* caused several prosecutions to be instituted against that paper. On this account he withdrew from its staff, and began the publication of a weekly pamphlet under the name of *La Lanterne*. More than 80,000 copies were sold on the day of its first publication (1st June 1868), and its circulation as a whole averaged about 120,000 weekly. It was suppressed by the Government after the eleventh number, and prosecutions were instituted against R., who fled to Brussels, where he continued the publication of *La Lanterne*, and among other things, fought his fourth *duel de journaliste*. In 1869 he returned Paris, having been elected to the Chamber of Deputies by the First Circumscription of Paris, after being defeated by M. Jules Favre in the Seventh. He now started a journal called *La Marseillaise*, in which he continued his attacks upon the Empire. It was while attempting to arrange a duel between R. and Prince Pierre Bonaparte that M. Victor Noir, a writer in *La Marseillaise*, was shot dead by the Prince in his own salon. Early in 1870 the journal was seized, and a fresh prosecution instituted against R. by the authority of the Chamber. On the 22d of January he was fined 3000 francs and sentenced to six months' imprisonment. The overthrow of the Empire on the 4th of September released him from the Sainte-Pélagie, and he became a member of the Provisional Government, but resigned on the 1st of November. In December he re-established *La Lanterne*, and in February 1871 changed its name to *Le Mot d'Ordre*. Elected in February to the National Assembly, he refused to sit, and by his writings promoted the cause of the Commune. After its fall he was arrested, and sentenced to fifteen years' transportation. He was taken to New Caledonia in 1873, but in March 1874 he made his escape to Newcastle, New South Wales, whence he returned to Europe by way of America. He settled first at Brussels and then at Geneva, in both of which places he continued the publication of *La Lanterne*. In 1876 he became a regular contributor to the newspapers *Les Droits de l'Homme* and *Le Radical*, published in Paris.

ROCHESTER, University of, an educational institution of the Baptists, at Rochester, N. Y., organized in 1850. In 1876 it was possessed of property to the extent of more than half a million of dollars. This amount is now largely increased.

ROCHESTER, a town of Adams Co., Neb., 96 miles W. of Lincoln. It has three railroads; is a good shipping point; is surrounded by an agricultural district; and is engaged in manufacturing. Pop. 4500.

ROCHESTER, in Olmstead Co., Minn., on the Winona & St. Peter Railroad, 50 miles from Winona. It is surrounded by an agricultural district, and is the center of an active trade. Pop. 5113.

ROCHESTER, in Strafford Co., N. H. It is 10 miles N. of Dover, and is extensively engaged in manufacturing. Pop. 5785.

ROCKLAND, a town of Plymouth Co., Mass., on the Old Colony Railroad, 18 miles from Boston. It is one of the most prominent shoe-manufacturing towns in the state. Pop. 4553.

ROCKVILLE, in Tolland Co., Conn., 16 miles from Hartford. It is principally engaged in the manufacture of woollen and silk goods. Pop. 6500.

RODGERS, John, an American naval officer, born in Maryland, in 1771, and entered the navy in 1798. In 1799 he was made captain, for his gallantry at the capture of the French vessel *L'Insurgente*, and in 1805 succeeded Com. Barrow in command of the squadron, then operating against Tripoli. During the war of 1812, he rendered valuable services to the American cause. Died at Philadelphia, Pa., Aug. 1, 1838.

ROE, Edward Payson, an American author, born in New York, in 1838, graduated from William's College, and entered the ministry of the Presbyterian church. He was for a time pastor of a church at Highland Falls, but has devoted most of his energies to literary work, making his home at Cornwall-on-the Hudson. He has written *Barriers Burnt Away; Opening of a Chestnut Burr; From Jest to Earnest*, etc. His works have proved exceedingly popular, and are notable for the pure sentiment which pervades them.

ROE, Sir Thomas, was born at Low-Leyton, in Essex, England, about 1580. After studying at Magdalen College, Oxford, he entered the court of James I., and was knighted in 1604. In 1609 he sailed for 300 miles up the Amazon, and was next sent as envoy to the Great Mogul, Shah Jehan, at whose court in Delhi he resided from 1614 to 1618. He entered the House of Commons as member for Cirencester in 1620, and again in 1640 as member for the University of Oxford. In 1621 he was sent as ambassador to Constantinople, and on his return he presented many Oriental manuscripts, which he had collected, to the Bodleian Library. The Alexandrian MS. of the Greek Bible which he obtained is now in the British Museum. In 1629 R. was successful in negotiating a peace between Poland and Sweden, and it is believed the intervention of Gustavus Adolphus in the Thirty Years' War was due to his advice. In 1641 he was English ambassador at the Diet of Ratisbon, and on his return he was made Chancellor of the Garter and a privy counselor. He died November 6, 1644. His works are *A True and Faithful Relation of what hath lately happened in Constantinople, concerning the Death of Sultan Osman and the setting up of Mustapha, his uncle* (Lond. 1622); and a *Journal of Voyages to the East Indies, Turkey, Egypt, Palestine, and Persia*, published first in French (1663), and in English in the same volume with Della Valle's *Travels* (1664).

ROE'BLING, John A., a distinguished engineer, born at Mulhausen, Prussia, June 12, 1806, and graduated from the Royal Polytechnic School, Berlin, with the degree of C E. He came to America in 1831, and since then has planned and executed some of the most remarkable suspension bridges in the U. S. The greatest monument to his engineering skill, is the Brooklyn bridge, spanning the East River, and connecting the cities of Brooklyn and New York. (See Bridge in Am. Supp.). While directing this structure, he injured his foot, an amputation was performed, and lockjaw followed, from which he died, in Brooklyn, July 22, 1869. The work was continued and completed under the supervision of his son Washington Roebling.

ROGER OF WENDOVER, an English chronicler of the 13th c., was a monk of St. Albans, became precentor of the Abbey, and afterwards prior of Belvoir, from which office he was deposed about 1219. He afterwards returned to St. Albans, where he died, it is thought about 1237. His *Flores Historiarum* is a history of the world from its creation in two books, the first coming down to the birth of Christ, and the second to the nineteenth year of Henry III.'s reign. Although not without value for the whole period of English history, partly because he has gathered his materials from sources that have since perished, by far the most important part is that which treats of his own times. Here he is an original author, and writes in a bold, manly, and impartial style. The work has been edited for the English Historical Society by the Rev. H. O. Coxe (1841–44), of whose text there is an English translation by Giles in Bohn's *Antiquarian Library*.

ROGERS, John, the first of the 'Marian martyrs,' born at Deritend, a suburb of Birmingham, England, in 1505, was for several years chaplain to the Merchant Adventurers at Antwerp, and pastor of a Dutch congregation at Wittenberg, Saxony, where he turned Protestant. He became acquainted with Tyndale and Coverdale, and using the former's MSS. he prepared a revised edition of the English Bible, based on Coverdale, which he published under the name of Thomas Matthew. Returning to England, he accepted office in the Church, and in 1553 was cited before the Privy Council to answer for a sermon which he had preached at St. Paul's Cross on the Sunday after Queen Mary's entry into London, denouncing Romanism, and urging the people to hold to the Reformation principles. After a long imprisonment, he was tried for heresy before Gardiner, and condemned to be burnt at the stake at Smithfield, a sentence executed on February 4, 1555. His life has been written by Colonel Joseph L. Chester (1861).

ROGG'EVELD MOUNTAINS, a range in the western portion of Cape Colony, with an average height of 5000 feet. From a distance it resembles an immense wall, and throughout its length of nearly 200 miles there are only one or two available passes.

ROHLFS, Gerhard, an African traveler, was born at Vegesack, near Bremen, 14th April 1832. He fought as a volunteer in the Schleswig-Holstein struggle of 1849, subsequently studied medicine at Heidelberg, Göttingen, and Würzburg, and after traveling through Austria, Italy, and Switzerland, went to Algeria (1861), where he served in the foreign legion of the French army, and

acquired such a command of Arabic that he subsequently ventured to travel through the interior in a Mohammedan guise. He explored various parts of Morocco and the Soudan, crossed the African continent from the Mediterranean to Lagos, in Guinea, accompanied the English expedition against Abyssinia (1867), and made two notable journeys through the Libyan desert, the second in 1873, in which he was accompanied by Jordan the astronomer, Zittel the mineralogist, Ascherson the botanist, and Remelé the photographer.

ROHTUCK, the chief town of the district of the same name, in the Punjaub, British India, 42 miles N.W. of Delhi. There is a manufacture of turbans interwoven with gold and silver thread, and of fine cotton cloth. Pop. (1868) 14,153.—The *district* of R. has an area of 1811 sq. miles. Pop. (1868) 536,959. It is partly irrigated by the W. Jumna Canal. The crops are millets, wheat, gram, and barley. The breed of cattle is famous. Jhujjur is a considerable town, in a tract which was forfeited after the Mutiny of 1857, when the whole district was for a time lost to the British.

ROLLESTON, George, M.D., F.R.S., born at Maltby, Yorkshire, England, July 30, 1829, was educated at the Grammar School of Gainsborough and Sheffield Collegiate School; and, proceeding to Pembroke College, Oxford, was elected fellow (1851). Having studied medicine at St. Bartholomew's, London, and served as assistant-physician in the British Civil Hospital at Smyrna during the Crimean War (1855–56), he became physician to the Ratcliffe Infirmary, Oxford (1857), Lineacre Professor of Anatomy and Physiology (1866), and a fellow of Merton (1872). R. is author of an able treatise on *Forms of Animal Life* (1870), besides a *Report on Smyrna* (1856), the Harveian oration for 1873, &c. He has also contributed a treatise on craniology to W. Greenwell's *British Barrows* (1877).

ROMANCE', or ROMAN'ZA, a little song with a love story, or a melody imitative thereof. The word is derived from the songs of the troubadours having been sung in the R. languages.

ROME, a town of Floyd Co., Ga., on the Coosa River. It has fine railroad facilities, and is surrounded by an agricultural district. It is important as a trade center and a cotton depôt. Pop. 5000.

ROM'NEY, George, a famous portrait painter, was born at Dalton-in-Furness, Lancashire, England, 15th December 1734. He was brought up to his father's business of cabinetmaking, but at the age of nineteen was placed with Steele, a painter at Kendal, with whom he remained for five years. In 1756 he married, and after practising at York as a portrait painter, removed to London in 1762. Rapidly attracting public attention, and making many influential friendships, he became in the course of a few years the successful rival as a portrait painter of Reynolds and Gainsborough. In 1773 he visited Italy, and returning two years later, continued to work in London and at Hamstead till 1799, when he retired to Kendal in broken health to join the wife whom he had only visited twice in thirty-seven years. He died at Kendal, 15th November 1802. In his later years he gained a high reputation as a painter of historical subjects. Several of his works are engraved in Boydell's *Shakspeare*.

He never exhibited at the Royal Academy or sought academic honors. Lacking the delicacy of Reynolds and the charming vivacity of Gainsborough, and ranking below either as a colorist, R. yet surpasses both in intense dramatic feeling and a passionate sense of female beauty. See the elaborate Life by the poet Hayley (1809); a briefer one by the Rev. John R., son of the painter (1830); and *English Art under George III.*, by Sidney Colvin, in the *Fortnightly Review* for March 1874.

ROON, Albrecht Theodor Emil, Graf von, a celebrated Prussian general and military reformer, was born at the family seat of Pleusberg, near Kolberg in Pommern, 3d April, 1803, entered the cadet school of Kulm in 1816, became lieutenant of infantry in 1821, studied at the Berlin Kriegsschule 1824–27, was appointed teacher of cadets in 1828, member of the general staff topographical survey in 1833, and teacher in the Berlin Kriegsschule in 1835. As chief of the staff of the Eighth Army Corps, he took part in quelling the revolt of Baden in 1849, and after rising step by step to the chief command of the 14th Division was made Minister of War in 1859, an office which he held from 1861 in conjunction with that of Minister of Marine. During the struggle between the Government and the majority of the Diet (1861–66) he carried out his plan of army reorganization in the face of strenuous opposition. After the war of 1866, which demonstrated his ability in organization, he received the Cross of the Black Eagle, and after the French campaign of 1870–71 was rewarded with the rank of Graf. He resigned the office of Minister of Marine in 1871, and on the unexpected resignation by Bismarck of the presidency of the cabinet after the triumph of passing the Districts Organization Bill (1872), the office devolved on him as senior Minister of State. It is generally supposed that he merely held the premiership as a *locum tenens* till Bismarck was reinstated with increased authority and prestige, at the head of a larger Liberal majority, 11th November 1873. He is the author of various works on military subjects, of which the principal are *Grundzüge der Erd-, Völker-und Staatenkunde* (3d ed. 3 vols. 1847–55), *Militär. Länderbeschreibung von Europa* (1858), and *Anfangsgründe* (12th ed. 1868).

ROSARIO, a town in the Argentine Republic, 170 miles W. of Buenos Ayres, on the right bank of the river Paraná. Being the entrepôt for a large region, the trade of R. is very extensive. The chief exports are wool, hides, bones, dried beef, maize, and wheat together with copper and silver from the mines of Catamarca and San Luis. R. is the center of railway lines, one of which will eventually connect it with Valparaiso on the Pacific. Pop. (1877) 25,000.

RO'SARY, a number of beads strung together, used in devotional exercises by Hindus, Buddhists, Mohammedans, and Roman Catholics. The beads are of various materials, stone, coral, amber, wood, seeds, and ivory being employed. The R. probably had its origin in India, where it has been used for upwards of 2000 years. The R. of the Hindus and the Buddhists consists of 108 beads, which when used by Vaishnavas and Buddhists, are always made of the smooth wood or seeds of the Toolasee plant (*Ocymum sanctum*). The beads of the Saivas consist of the rugged berries of the Rudracha tree (*Elæocarpus tuberculatus*). The Mohammedan R., or *tusbeeh*, is made up of 100 beads in honor of the same number of names of the Deity. The Lady Psalter of the Roman Catholics contains three groups of fifty-five beads each, or fifteen decades, in honor of the five glorious, five joyous, and five sorrowful events of Our Lord's life, death, and resurrection.

ROSE'CRANS, William S., an American general, born at Kingston, O., Sept. 6, 1819, and graduated from West Point in 1842. In 1854 he resigned from the army, and, locating in Cincinnati, O., engaged in business pursuits. At the outbreak of the civil war, he entered the Union service, and served for some time on the staff of Gen. McClellan. In 1861 he was made brigadier-general U. S. A., and in 1862 was made major-general of volunteers. He commanded a brigade at Rich Mountain, and the Army of the Mississippi at the battles of Inka (Sept. 19, 1862) and Corinth (Oct. 3–4, 1862). He was subsequently placed in command of the Army of the Cumberland, fought the battle of Murfreesboro' (Dec. 31, 1862—Jan. 3, 1863), and was defeated at Chickamauga (Sept. 19–20, 1863), after which he was removed to Missouri, where he repelled the invasion of Sterling Price (see Price, Sterling, Am. Supp.). After the war he removed to California where he engaged in farming upon an extensive scale. He is now (1884) a member of Congress from California.

ROSS, Alexander, was born at Aberdeen, Scotland, in 1590, educated for the Church, became chaplain to Charles I., and master of the Free School of Southampton. He died in 1654. R., who had managed to gather a good deal of money in his lifetime, left, among numerous other benefactions, £200 to the town council of Aberdeen to found bursaries, and £50 to the Bodleian library. He wrote about thirty works in prose and verse, all of which are entirely forgotten, and such unquestionably would have been the fate of Alexander himself, in spite of his charities, had it not been for the couplet in Hudibras:

> 'There was an ancient sage philosopher,
> And he had read *Alexander Ross* over.'

ROSS, Alexander, a Scottish poet, born in the parish of Kincardine-O'Neil, Aberdeenshire, 13th April 1699, studied at Marischal College, and was successively parish teacher at Aboyne, Laurencekirk, and Lochlee, where he died 20th May 1784. His *Helenore, or the Fortunate Shepherdess, a Pastorale Tale in the Scottish Dialect, to which are added a few Songs by the Author*, was published at Aberdeen in 1768. The volume at once gave R. a place by the side of Ramsay, as a master of the native Doric, and time has not robbed his verses of their charm. *Helenore* has still her ardent admirers, while the simplicity, blythe-heartedness, and racy vigor of the songs, give unabated pleasure. The very titles of some recall delightful memories; *Woo'd and Married and a'; The Rock and the Wee Pickle Tow;* and *To the Begging we will go.* To the 5th edition of the *The Fortunate Shepherdess* their is prefixed a memoir of the poet by his grandson, the Rev. Alexander Thomson, minister of Lintrathen, Forfarshire. The best edition is that by Dr. Longmuir (1866), containing a sketch of R.'s unedited works.

ROSS, Ludwig, a German philologer and archæologist, was born of a Scottish family, at the paternal estate of Horst, in Holstein, 22d July, 1806, and studied at Kiel and Leipsic. In 1832 he set out to travel in Greece, and two years later was made conservator of antiquities at Athens. He held a professorship of archæology in the University of Athens from 1837 till the revolution of September 1843, and in 1845 was appointed to a similar chair at Halle. By intense devotion to study he greatly impaired

his health, and perished by his own act, 6th August, 1859. His chief works are *Inscriptiones ineditæ* (3 parts, 1834–45), *Demen von Attika nach Inschriften* (1846), *Handbuch der Archäologie der Kunst* (1841), *Reisen auf den Griech. Inseln des Ægäischen Meeres* (4 vols. 1840–52), *Italer und Gräken* (1858), *Hellenika* (2 vols 1846).

ROSSIE'NY, a town of the government of Kovno, in European Russia, stands on the Dubissa, 88 miles N.W. of Kovno. It was formerly capital of the Polish province of Samogitia. Pop. (1870) 10,700.

ROS'WITHA (properly *Hrôthsuith*, from the Old High Ger. *Hruodsuind;* Latinized *Hrotsvitha* and *Hroswitha*), a German poetess, born 935 A.D. of a noble Saxon family, became a nun at Gandersheim about 980, and died there about the beginning of the 11th c. She wrote six comedies in Latin after Terence, a poem in Latin hexameters on the deeds of Otto the Great, eight 'legends,' &c. Her works were first published by Konrad Celtis (Nürn. 1501); the last critical edition is that by K. A. Barack (Nurnb. 1852). Their genuineness has been challenged by Aschbach (1867), and vindicated by Köpke (1869) in his *Ottonische Studien.* There is a French translation of the 'Comedies' by Magnin, with an admirable introduction (Par. 1845). The best edition of the poem on Otto is that by Pertz in the *Monumenta Germania Historica.* See also the Essays by Hoffmann and G. Freytag (Brest, 1839), and by Dorer (Aarau, 1857).

ROTT'LERA, is a genus of about 20 species of shrubs or small trees belonging to *Euphorbiaceæ*, found in tropical Asia and Australia. By Müller the species are placed under *Mallotus.* From the surface of the fruit of *R. tinctoria* a red mealy powder is obtained, known in India as Kalama, Kapila podi, or Wurrus, which is used as a purgative, an anthelmintic, and sometimes in cutaneous diseases. It is also largely used as a dye-stuff for silk —red, rose-pink, and orange being obtained from it, and, by additional processes, blue, black, and green. The bark serves for tanning, and the leaves and fruit are applied externally with honey against the bite of poisonous animals. The name R. is in commemoration of Dr. Rottler, an eminent missionary for nearly fifty years in India, and a good botanist.

ROUS, or ROUSE, FRANCIS, was born at Halton, Cornwall, in 1579, and educated in Oxford at Broadgate Hall, near Pembroke College. He represented Truro in several Parliaments during the reigns of James and Charles I. In 1640 he sat in the Long Parliament; and in 1643 was made a member of the Westminster Assembly, and Provost of Eton College. He was unfit for this post, and the Royalists nicknamed him 'the old illiterate Jew of Eton.' In 1645 the Commons ordered the publication of his metrical version of the Psalms, a work which forms the basis of the modern Presbyterian Psalter. R. was made a privy councilor, and entered the House of Lords in 1657. He died at Acton, near London, 7th January, 1659.

ROW, JOHN, a Scottish reformer, was born near Stirling about 1525; studied at St. Andrews Univerity, where he devoted himself to civil and canon law. In 1550 his reputation as a pleader was such that the Scottish clergy sent him to Rome as their agent and representative there. While in Italy R. took the degree of Doctor of Laws at the University of Padua. Returning to Scotland in 1558, he began to examine the doctrines of the Reformers, and in 1559 abandoned Catholicism. In April 1560 he was one of six ministers appointed to compile a *Confession of Faith* and the *First Book of Discipline;* became minister of Perth in July, and took part in the first General Assembly of the Reformed Church of Scotland which met at Edinburgh, December 20, 1560. He was conspicuous in all the ecclesiastical transactions of the time, and held the office of moderator four times. He also took part in compiling the *Second Book of Discipline.* R. died at Perth, October 16, 1580. By his marriage with Margaret Bethune, daughter of the Laird of Balfour, in Fife, he had eight sons, one of whom, also named JOHN (born 1568, died 1646), was the author of a *Historie of the Kirk of Scotland*, extending from the year 1558 to August 1637, and continued by *his* son to July 1639. This valuable work was printed for the 'Wodrow Society,' and also for the Maitland Club.

ROWLOCK (pron. *rullock*), is the name applied to a contrivance on the wale of a boat, to hold the oar in rowing. It consists of two vertical pegs of wood or iron, or of a pivoted iron hook or stirrup, or simply of a notch cut in the wale.

RSHEV, a town of the government of Tver, in European Russia, stands on the Volga 80 miles S.W. of the town of Tver. It has nine churches, and carries on a considerable trade in fish, linen, and hemp-seed. Pop. (1870) 18,732.

RU'BINSTEIN, ANTON, a modern composer and pianist, was born at Wechwotynetz, near Jassy, Russia, November 30, 1829. He played at a concert at Moscow at the age of nine, and was sent a year afterwards to Paris, where he studied for a year and a half. R. settled in St. Petersburg in 1848, where he wrote *Dmitri Donski*, his first opera, produced in 1852. He founded the conservatory of music at St. Petersburg, of which he was for nine years director. For many years he has been known as one of the most powerful and brilliant of pianists. He visited America in 1875. R. has composed over 100 separate works, including operas, cantatas, symphonies, string quartets, and numerous pianoforte compositions and songs. Among them are the operas *Die Kinder der Haide* (Vienna, 1861), *The Demon* (St. Petersburg, 1875), *Die Maccabaer* (Berlin, 1875), *Feramors* (*Lallah Rookh*) and *Nero*, the oratorio *Paradise Lost*, and the *Ocean* and *Dramatic* symphonies. In his words, as in his performances, he has two separate styles, one full of savage energy and strength, the other possessing an infinite charm of tenderness and sensibility. His younger brother NICHOLAS enjoys a high reputation in Russia as a pianist and composer.

RUHM'KORFF, HEINRICH DANIEL, a philosophical mechanician, was born at Hanover in 1803. In 1819 he went to Paris and was porter in Chevalier's laboratory. In 1839 he started business as a scientific manufacturer, and 1844 constructed an improved and convenient thermoelectric battery. After a lengthened series of experiments in magneto-electricity, he brought out his induction coil or inductorium in 1851, hence known as the R. coil. At the Paris Exhibition of 1858 he was awarded a prize of 5500 francs for his collection of scientific apparatus, and in 1863 he obtained a grant of 50,000 francs from Napoleon III. for his improvements in the galvanic battery. He died December 21, 1877.

RUTE'BEUF, a famous trouvère of the 13th c. Almost nothing is known of his history. From his writings we learn that he had no other profession than that of *rimeur;* while a phrase in his *Dit de l'Erberie* leads to the conclusion that he was a native of Champagne. R., however, was no common minstrel or jongleur. If misery forced him to beg he addressed himself to the King and to the most illustrious personages of France. That he suffered from poverty is not wonderful. By his own admission he was idle, debauched, evil-tongued, and addicted to gambling. The fifty-six pieces which R. has left are mostly short; they comprise satirical or devotional *dits*, historic songs, hymns, plaints, in which he celebrates the memory of his dead benefactors or mourns over public calamities, *tensons*, a small number of *fabliaux*, two legends, some allegorical trifles, and a drama. R. is a very unequal writer; he is rude and full of affectations, but there is withal so much verve, originality, and energy in his poems—so much, in a word, of genuine inspiration—that modern criticism has assigned him a foremost place in the ranks of the trouvères. Satire is his true element. In this respect he foreshadows the characteristic feature of later French literature, and may be regarded as a medieval Voltaire or La Fontaine. Princes, popes, prelates, barons, burgesses, advocates, even serfs, are in turn the butt of his ridicule; but it is against the religious orders that he darts his keenest and most pungent epigrams. Perhaps the finest of his fabliaux is *Charlot le Juif.* One of his pieces, entitled *Mort ou la Repentance R.*, has given rise to the conjecture that this merciless mocker of priests closed his career in the cloister, seeking there the repose denied him in the world. See A. Jubinal, *Œuvres Complètes de R.* (2 vols. Par. 1838–39).

RUTGERS COLLEGE, chartered in 1770 as Queen's College, located at New Brunswick, N. J., and controlled by the Reformed (Dutch) Church. It has classical, scientific, and theological departments, is well endowed and has a fine library, an astronomical observatory, and an excellent corps of instructors.

RUTH'ERFORD, SAMUEL, a Scotch divine, born about 1600 in the parish of Crailing, Roxburghshire, studied at Edinburgh, was chosen professor of classical literature in 1623, but soon turned his attention to theology, and in 1627 was settled as parish minister of Anwoth in Kirkcudbrightshire. In 1636 he published at Amsterdam an elaborate work in Latin on the Arminian controversy, entitled *Exercitationes Apologeticæ pro Divina Gratia.* For this he was deposed in 1636, and ordered to confine himself to the city of Aberdeen, then a stronghold of Episcopacy. Here he wrote most of those Letters (first published in 1664) which have given him so great a celebrity. R. took part in the famous Glasgow Assembly of 1638, and was soon after appointed professor of divinity at St. Andrews. He went in 1643 as one of the Scotch Commissioners to the Westminster Assembly, issued his famous *Lex Rex* in 1644 against the doctrine of absolute monarchy, became Principal of St. Andrews in 1649, and was twice offered a chair of divinity in Holland in 1651. He died March 19, 1661. R. wrote numerous other works both in Latin and English. He was a man of great piety and intellectual fervor.

RUTLEDGE, EDWARD, an American patriot, born at Charleston, S. C., Nov. 23, 1749, and began the practice of law in his native city in 1773. He was an active promoter of the Revolution, a signer of the Declaration of Independence, and one of the committee that drew up the first Articles of Confederation. After the war he was U.S. Senator (1794), and governor of South Carolina (1798). Died at Charleston, S. C., Jan. 23, 1800.

RUTLEDGE, John, an American patriot, born at Charleston, S. C., in 1739, studied law in England, and settled in his native city. He was a member of the Continental Congress (1774–75), and throughout the war of the American revolution was one of the staunchest and most trusted supporters of the colonial cause. He was made a justice of the U. S. supreme court (1789), chief-justice of South Carolina (1791), and chief-justice of the United States (1795). The last appointment, however, failed to be confirmed by the senate. Died at Charleston, S. C., July 23, 1800.

RUTNAGHERRY (*Ratnágirí*), the chief town of the district of the same name in the Bombay Presidency, British India, on the shore of the Arabian Sea, 150 miles S. of Bombay. Pop. (1872) 10,614.—The *district* of R., which lies between the E. Ghauts and the Arabian Sea, N. of the Portuguese territory of Goa, has an area of 3789 sq. miles; pop. (1872) 1,019,136. The crops are rice and other grains, betel, and cocoa-nuts. R. suffered, though not severely, from the famine of 1877.

RUVIGA'DO, a town in the United States of Colombia, province of Antigua, at a height of 8900 feet above the sea. It has a considerable trade. Pop. 10,000.

RY'MER, Thomas, born in Yorkshire, England, 1639, was educated at the grammar-school of Northallerton, entered Sydney-Sussex College, Cambridge, and was called to the bar at Gray's Inn, 1666. He was appointed historiographer to the king when Shadwell died in 1692, and was employed on a scheme of Montagne and Lord Somers for the collection of state papers relating to transactions between England and the States. In 1703, the first volume of this work appeared under the title of *Fœdera, Conventiones et cujuscunque generis Acta Publica inter Reges Angliæ et alios Principes.* Seventeen volumes of the *Fœdera* were edited by R., and three more by Sanderson. It was reprinted at the Hague in 10 vols. (1739). R. died in poverty, December 14, 1714.

S.

SABELL'A, a genus of marine worms or *Annelida*, belonging to the order *Tubicola*, in which the animals form tubes of various materials to inclose their bodies. The tube formed by S. is of membranous or leathery consistence. It is buried in the sand, only the gills appearing above the surface. The 'blood' or pseudo-hæmal fluid in S. is of an olive-green color.

SACCHI'NI, Antonio Maria Gasparo, one of the most popular of the older Italian operatic composers, was born July 23, 1734. His works include 38 operas, 5 oratorios, and much church and instrumental music. At the time of his death, October 7, 1786, he was the idol of the Parisian public. Though his compositions are now almost obsolete, his free and happy style and rich instrumentation had a powerful effect upon his art, and live in the works of many of his successors. See Fétis, *Biogr. Univ. des Musiciens* (new ed. 1878).

SACK'VILLE, Viscount, an English soldier and statesman of the reigns of George II. and III., was the third son of the first Duke of Dorset. He was born on January 26, 1716, and entered the army under the title of Lord George S. At Dettingen (1743) and Fontenoy (1745) he served with credit, and obtained the rank of colonel at Culloden (1746). He subsequently became a privy-councilor, and was secretary for Ireland in 1751. At the Battle of Minden (1759) he was in command of the allied cavalry, and, refusing either from cowardice or jealousy to obey the order to charge given him by Prince Ferdinand of Brunswick, he saved the French army from annihilation. On this charge he was tried by court-martial, and adjudged incapable of serving thereafter in any military capacity. George II. struck his name off the list of privy-councilors, and for eight years he lived in retirement and disgrace. In 1770 he inherited the property of Lady Elizabeth Germain, and assumed her name. The cloud under which his questionable conduct had placed him gradually dissolved, and having been noted for his opposition to the claims of the American colonists, he became in 1775 Secretary for the Colonies in Lord North's ministry, and carried on the American War, with what success is well known. He retired from office in 1782, and was created V. S. and Baron Bolebrook. He died on August 26, 1785, and his eldest son afterwards became Duke of Dorset.

SAD'LEIR, Sir Ralph, was born at Hackney, Middlesex, England, in 1507. In his eleventh year he attracted the notice of Henry VIII., by whom he was afterwards employed in the dissolution of the religious houses, and rewarded from their spoils. From 1537 to 1542 he made several journeys to Scotland upon diplomatic business, first to strengthen the English interest at the northern court, twice thereafter to persuade James V. to cast off the supremacy of the Pope, and again to bring about the proposed match between Edward, Prince of Wales, and the infant Mary, afterwards Mary Queen of Scots. Upon the accession of Mary Tudor to the English throne, he retired to his estate near Hackney. Elizabeth called him to the Privy Council, and appointed him keeper of Queen Mary in the Castle of Tutbury. After the execution of the unfortunate queen, he was sent to pacify King James. He died at Standon, Hertfordshire, 30th March, 1587. His *State Papers and Letters* (1809) were prefaced by his memoir by Sir Walter Scott. See *A Memoir of the Life and Times of the Right Hon. Sir R. S., compiled from State Papers by his Descendant, Major F. Sadleir Stoney* (1877).

SADOLE'TO, Jacopo, a celebrated Italian humanist, was born at Modena, July 14, 1477. He was ordained a priest in 1502, and appointed apostolic secretary by Leo X. in 1513, and by Clement VII. in 1523. Nominated Bishop of Carpentras in 1517, and Cardinal by Paul III. in 1536, he died at Rome, October 18, 1547. S. was much esteemed in his own age for his sincere piety and his love of learning, while his moderation and desire for the reform of the Church from within, led to his employment in various negotiations between Karl V., François I., and the Popes. Of his works, which are distinguished for the clearness and Ciceronian dignity of their style, the chief are—*De Liberis recte Instituendis* (Paris and Venice, 1533, often reprinted; French trans. by Charpenne, Paris, 1855); *In Pauli Epistolam ad Romanos* (Venice, 1536); *Hortensius, sive de Laudibus Philosophiæ* (Lyon, 1538); *Epistola ad Senatum Populumque Genevensem* (Strasb. 1539; French trans., with a reply from Calvin, Geneva, 1540); *Poemata* (Leipz. 1548); *Philosophiæ Consolationes et Meditationes in Adversis* (Frankf., 1577). By his *Epistolarum Libri xvii.* (Lyon, 1550; 5 vols. Rome, 1759–67) alone he is now remembered. See Joly, *Etude sur S.* (Caen, 1857).

SAD'OWA, a village near Königgrätz in Bohemia, after which the French name the great battle fought there, 3d July, 1866.

SAGINAW, a city of Michigan, on the river of the same name, and capital of Saginaw Co. It is 18 miles from the mouth of the Saginaw, which at that point is navigable for vessels of largest size. It is situated in the midst of a fertile farming country, has large manufacturing interests, fine public schools, and a pop. of about 16,000.

SA'GUENAY, a river of Canada, tributary of the St. Lawrence, which it joins 120 miles below Quebec. The Chomouchuan, or main branch of the S., rises in the Laurentian mountains, and flows first E. then S.E. for 215 miles, when it enters Lake St. John. Here it receives the Mistassini, 180 miles long, the Paribonsa, 165 miles long, and the Metebetchuan, 110 miles long. On issuing from the lake it forms numerous rapids, and gradually widens till it attains a breadth of 2 miles, after which it again narrows and proceeds to the St. Lawrence through a deep gorge whose cliffs are often more than 1500 feet high. The S. drains an area of 23,700 sq. miles, which, being mostly mountainous and densely wooded, discharges a very large volume of water. Its great depth, sometimes above 100 fathoms, renders it navigable for 110 miles, and much timber is shipped from its banks.

SAINT-AMOUR, Guillaume de, a famous doctor of the Sorbonne of the 13th c., was born at St. Amour in Franche-Comté. He was an active member of the Church, went to Rome to plead for the independent rights of the University of Paris, and wrote vigorously against the mendicant orders. He incurred the wrath of the Pope and of St. Thomas, but was popular with the French people. He died 13th September 1272. His works, the chief of which is *De Periculis Novissimorum Temporum*, were printed at Constance in 1622.

ST. CHARLES, a town of Missouri, on the Missouri River, 20 miles above its mouth, and 19 miles by rail from St. Louis. It

has thirteen churches, four newspapers, and ten schools. The Missouri is here crossed by an iron railway bridge 2 miles in length, with its approaches; erected at a cost of $2,000,000. S. C. has extensive flour and starch mills, and breweries. Pop. 5570.

SAINT-CYR, Laurent Gouvion, Marquis de, Marshal of France, was born at Toul, 13th April 1764. In 1792 he joined the French army as a volunteer, and rose rapidly during the campaigns on the Rhine and in Germany between that year and 1797. In 1794 he became a general of division, and in 1798 he received the command of the French troops in Rome. He subsequently distinguished himself in the German and Italian campaigns, and in the Peninsular War. He was not among the eighteen marshals created by Napoleon on his ascending the throne in 1804, but received his baton during the Russian campaign of 1812, when he gained a brilliant victory over Prince Wittgenstein at Polozk. In the disastrous Saxon campaign of 1813 he twice defended Dresden with much gallantry. On the news of his final capitulation being announced to Napoleon, a general standing by remarked, 'We have lost another 30,000 men.' 'Worse than that,' replied the Emperor, 'we have lost Saint-Cyr!' On the Restoration he was created a peer of France, and remaining faithful to the royalist party in 1815, was appointed Minister of War at the close of the Hundred Days. This office he resigned in a few months, but was reappointed in 1817, and introduced several important reforms. In 1821 he retired from public life, and devoted himself to agriculture and to the composition of historical works. He died at Hyères, 10th March, 1830.

SAINT LOU'IS, the capital of the French possessions in Senegambia, is situated on a sandy island, 2500 yards long, 5 miles from the mouth of the river Senegal. It is fortified, and has a considerable trade, but is dirty and poorly built. Pop. (1875) 15,748, of whom only a very small number are whites.

SAINT'ON-DOL'BY, Madame Charlotte Helen, an English contralto singer, was born in London in 1821, and was educated at the Royal Academy of Music, where she became King's Scholar in 1836. On leaving that institution she proved herself one of the most accomplished and cultivated of native artists, and immediately took high rank as a concert and oratorio singer. Mendelssohn formed an appreciative opinion of her powers, engaged her at the Gewandhaus concerts at Leipsic in 1846–47, and wrote the contralto part in *Elijah* for her. Till her retirement in 1870 she enjoyed a great and deserved popularity.

SAINT-PAUL, a town in the island of Réunion. Its pop. at the census of 1876 was 26,979.

SA'LA, George Augustus Henry, an English journalist of Italian parentage, was born in London in 1828. He early began to write for Dickens' *Household Words*, contributed the Hogarth papers to the *Cornhill Magazine*, was correspondent of the *Daily Telegraph* (1863–64) during part of the Civil War in the United States, and in the Franco-German War of 1870–71, founded and first edited *Temple Bar*, and recorded the 'Echoes of the Week' in the *Illustrated London News*. Of his many humorous stories and sketches, all characterized by ceaseless vivacity, the best are, perhaps, *Twice Round the Clock* (1859), *Accepted Addresses* (1863), and *Adventures of Captain Dangerous* (1863).

SALAMANCA, in Cattaraugus Co., N. Y. It is an important railroad center, and has extensive lumber mills and other manufacturing interests. It carries on a large trade with the surrounding country. Pop. 3498.

SALE, Sir Robert Henry, a distinguished English general, was born in 1792, and entered the army at the age of thirteen. He led the storming party against the stockades at Kemendeen, near Rangoon, in the first Burmese war of 1825, and also was conspicuous at the storming of Ghuzni, in the Afghan war of 1839. When the British force was destroyed at Cabul, he fortified himself at Jellalabad, where 'the illustrious garrison' held out from 12th November 1841 to 7th April 1842, when relieved by General Pollock. S. was killed at the battle of Mudki 18th December 1845. See Greig, *S.'s Brigade in Afghanistan*.

SALE'MI (Arab. 'place of delight'), a town of Sicily, province of Trapani, 48½ miles S.W. of Palermo, with a considerable trade in wine and oil. It is commanded by a ruined castle of Arabo-Byzantine architecture. Pop. (1874) 14,096.

SA'LIAN PRIESTS (Lat. *salii*, 'the leapers' or 'dancers'), a college of twelve priests, instituted by Numa, at the close of whose reign an *ancile* or shield fell from heaven and warded off a pestilence. Lest this shield should be stolen, Numa had other eleven made exactly the same, and appointed the S. P. to keep them. They were priests of Mars Gradivus, and celebrated his festival annually on 1st March, with great dancing and singing, after which they partook of a sumptuous feast in the temple of Mars on the Palatine. Tullus Hostilius is credited with the foundation of another college of Salii, but this less famous body was probably distinguished from the other chiefly by being chosen from a different tribe. The S. were always patricians.

SALISBURY, a town of Essex Co., Mass., on the Merrimac River and the Eastern Railroad. It is extensively engaged in the manufacture of woollen goods and carriages. Pop. 4079.

SALISBURY, Robert Arthur Talbot Gascoigne Cecil, Marquis of, K.G., eldest surviving son of the second marquis, comes of the family founded by William Cecil, Lord Burleigh, whose son Robert became Earl of Salisbury in 1605, the marquisate being added in 1789. S. was born at Hatfield, England, 13th February 1830, was educated at Eton and Oxford, and entered the House of Commons as member for Stamford in the Conservative interest in 1853. He sat until 1868, at first under the title of Lord Robert Cecil, and after the death of his elder brother as Viscount Cranbourne. In July 1866 he became Secretary of State for India under Lord Derby, but resigned on March 2, 1867, owing to a difference of opinion with regard to the Reform Bill. In 1868 he succeeded to the marquisate on the death of his father, and in 1869 he was elected Chancellor of the University of Oxford. He became Secretary of State for India when Mr. Disraeli took office in 1874, and represented England in the Conference of Constantinople in December and January 1876–77. On the retirement of Lord Derby from the cabinet on March 28, 1878, he became Secretary of State for Foreign Affairs, and signalized his accession to office by a circular on the Eastern Question, which convinced Europe that England intended to re-assert its influence as a great European power. Along with Lords Beaconsfield and Odo Russell he represented England in the Berlin Congress of June and July 1878. On his return he was invested by her Majesty with the Order of the Garter.

SALL'EE, or SLA, an Atlantic port of Morocco, at the mouth of the river Bu-Regreb, on the N. bank, the town of Rabat being built on the S. bank opposite. A bar renders the entrance to the port frequently unsafe. S. was formerly notorious as the headquarters of Moorish piracy, whence issued the dreaded 'Sallee rovers,' and so recently as 1851 both S. and Rabat were severely bombarded by the French for piratical conduct. S. has manufactures of carpets for home use; and exports wool, beans, and maize. Pop. about 12,000.

SALM-SALM, Felix, Prince, born in Austria, in 1828, came to America at the outbreak of the civil war, and entered the Union army. He rose to the rank of brigadier-general, and at the conclusion of that struggle went to Mexico, and entered the service of the Emperor Maximilian. After the overthrow and execution of Maximilian he returned to Europe, entered the Prussian service, and was killed at the battle of Gravelotte, in 1870.

SALVI'NI, TOMMASO, a distinguished Italian actor, born at Milan in 1829. His precocity procured his admission, at the age of fourteen, into a good dramatic company, where he received lessons from Modena. He was subsequently engaged in the royal company at Naples, and he played for six years in Domeniconi's company by the side of Adelaide Ristori. He afterwards retired for a time from the stage, during which he carefully studied the classic drama. He was a leading performer in the *fêtes* at Florence on Dante's sixth centenary in 1865. He subsequently undertook a lengthened tour through Italy, Spain, Portugal, and S. America, and in 1872–73 he visited the United States and again in 1880. His appearance at Drury Lane in 1875 in three of his most famous characters, 'Hamlet,' 'Othello,' and 'The Gladiator' in Soumet's tragedy, produced a furore of admiration. He appeared again in London in 1876. S. is a scholarly and cultivated man, of great ability as a comedian, of genius as a tragedian. He has a fine presence, a handsome and expressive face, and a noble bearing. His voice is magnificent in quality, and his elocution perfect. His excessive physical force, unequalled on the modern stage, sometimes mars his tragic style, by investing it with a certain savagery, while it unfits him for the illustration of pathos, tenderness, and the inner workings of the soul.

SALWEEN', a considerable river of Asia, supposed to rise in the Chinese province of Yunnan. It debouches into the sea in British Burmah, after a total course, almost due S., of 750 miles; area of drainage basin, 62,700 sq. miles. The city of Moulmein has grown up at its mouth, shortly above which it is joined by the Gyne and Attaran rivers. Immense quantities of timber, chiefly teak, are conveyed down the stream; but the banks in British territory are said to be becoming denuded of large trees.

SAN CHRIST'OBAL (formerly *Ciudad Real*), capital of the state of Chiapas, Mexico, on the river Tabasquillo, 450 miles S. of the city of Mexico. It was founded in 1528, and was the seat of a bishopric, first called by the benevolent Las Casas, whence it is sometimes called *Ciudad de las Casas*. It has manufactures of pottery, and of woollen and cotton stuffs, and is the center of a cattle-raising district. Estimated pop. (1877) 12,000.

SANC'TUS (in sacred music), a principal movement in the Mass of the Church of Rome; the 'Holy, Holy, Holy,' sung in the Communion Service of the Church of England.

SAND, the fine débris of crushed or water-worn rocks. As a rule it consists chiefly of quartz, often along with various coloring matters. Shell-sand frequently consists to a very large extent of broken fragments of the shells of molluscs, or of the entire shells of smaller species, along with foraminifera, sponge-spicules, &c. Coral-sand, in tropical countries, is formed of the detritus of coral-reefs. Magnetic sand contains magnetic oxide of iron.

SANDEMAN, ROBERT, the founder of a religious sect, known as Sandemanians, born at Perth, Scotland, 1718, and was educated at Edinburgh. In 1762 he established this sect in London. Among its peculiar features were a weekly love feast, eaten on Sunday, and the kiss of brotherhood. He came to America in 1764, and settled at Danbury, Conn. Died at Danbury, April 2, 1771. The sect still has a few adherents.

SAND'HURST, a city of Victoria, on the Melbourne and Echuca Railway, 101 miles N.N.W. of the former place. It is the center of the important Bendigo goldfield, and has also manufacturers of iron and pottery. The houses and public buildings are of stone and brick, and many of them are very handsome. The streets are well paved and lighted with gas, and the water supply is ample. S. returns two members to the colonial Parliament. Pop. (1881) 28,167.

SAN DIEGO, a city and seaport of Southern California. It is surrounded by a fine fruit-growing country, and has quite an extensive commerce. It was settled in 1769, and now has a population of 3100.

SANDY HOOK, a low, sandy peninsula, at the entrance to New York Bay. Near its extremity are the Navesink Lights, by which incoming vessels recognize the vicinity of New York.

SANDYS, EDWIN, a distinguished English prelate, was born at Hawkshead, Lancashire, in 1519. He was educated at St. John's College, Cambridge, where he adopted the tenets of the Reformers. In 1547 he was elected master of St. Catharine's Hall, and in 1553 vice-chancellor of the university. At the instance of the Duke of Northumberland he preached a sermon in favor of Lady Jane Grey, and was consequently imprisoned, but was soon released and fled to the continent, where he wandered from place to place in great misery until the accession of Elizabeth. He then returned to England, and was consecrated to the sees of Worcester (1559) and London (1570), becoming in 1576 Archbishop of York. He died at Southwell on the 10th of July 1588. He had charge of the Books of Samuel, Kings, and Chronicles in the translation (1565) known as the 'Bishops' Bible.' His second son, SIR EDWIN S. (1561–1629), endowed a philosophy lectureship at Oxford, and his youngest son, GEORGE S. (1577–1643), was well known as an Eastern traveler, and as the translator of Ovid's *Metamorphoses* (published 1632). See the Rev. R. Hooper's *Poetical Works of G. S., now first Collected, with Introduction and Notes* (2 vols. 1872).

SAN FERNAN'DO, a town of Spain, province of Cadiz, on the Isla de Leon. It is joined to the mainland by a bridge of boats, the Puente Sanzo, and has a marine school and observatory. The Calle Real, above 1 mile in length, is its finest street. Salt, which is abundantly found on the strand, is largely exported. Pop. 15,300.

SAN'GHA ('society'), the name of the monastic order or congregation of mendicants founded by Gautama Buddha, which exists to the present day as the nucleus of the Buddhist religion wherever that religion is professed.

SAN JACINTO, BATTLE OF, the final battle in the war waged for the independence of Texas, fought near the junction of the San Jacinto River and Buffalo Bayou, April 21, 1836. The Mexican army was commanded by Gen. Santa Anna, and that of Texas by Gen. Houston. After a desperate, but brief struggle, the former were routed, and Santa Anna was taken prisoner. The forces engaged were small, and the losses were slight, but the battle was decisive, and gave independence to the Republic of Texas.

SANKEY, IRA DAVID, an American evangelist, who has labored extensively with Moody, born at Edinburgh, Pa. His pathetic singing of gospel hymns has proved very effective with the masses.

SAN LU'IS, a province and town of the Argentine Republic. The town, commonly known as S. L. de la Punta, is situated 445 miles W.N.W. of Buenos Ayres, and has a pop. of about 8000; the pop. of the province (1869) was 53,294.

SANNYÁSÍ, properly a Hindu of the fourth order, who has renounced the world and lives by mendicancy. But the term is now applied to all sorts of religious beggars, especially to devotees of Siva, who correspond to the Mohammedan fakirs. They wander about the country, or are collected in convents. At the end of the last century they became a terror in Bengal, forming armed bands and ravaging the country.

SAN'TA ANN'A, a town in the republic of San Salvador, on the Pacific coast of Central America, 32 miles N.W. of San Salvador city. Pop. 12,000.

SANTA BARBARA, a town of Santa Barbara Co., Cal., 362 miles S.E. of San Francisco, situated near the coast, on the Santa Barbara Channel, and possessed of an excellent harbor. It is engaged in agriculture, stock-raising, and fruit-growing; and is celebrated as a health and pleasure resort. Pop. 3550.

SANTA CRUZ, a town of Santa Cruz Co., Cal., on the North side of Monterey Bay, 86 miles from San Francisco. It is engaged in agriculture, stock-raising, fruit-growing, dairying and in manufacturing leather, lumber, powder and lime. It is a favorite summer resort and is visited annually by 20,000 people. Pop. 4200.

SAN'TA FÉ, a province and town of the Argentine Republic. 1. The *province* is bounded on the N. by the Gran Chaco, on the E. by the river Parana, on the S. by the province of Buenos Ayres, and on the W. by the provinces of Cordova and Santiago. Its area is 43,700 sq. miles, and its pop. about 100,000. In 1876 it possessed 39 colonies, or special settlements of foreign immigrants, who numbered 23,500, and cultivated large crops of wheat, besides rearing sheep and cattle in great numbers. The largest town in the province is Rosario. 2. The *town* of S. F. is situated on the navigable river Salado, 12 miles above its confluence with the Parana, and has a considerable transit trade. Pop. 15,000.

SÁNTIPUR', a town in the district of Nuddea, Bengal, British India, on the left bank of the Bhagirutti, 56 miles N. of Calcutta. It contained a large cloth factory in the commercial days of the E. India Company, and is still inhabited by many weavers. It is also celebrated for its Sanscrit pundits and an annual religious fair. Pop. (1872) 28,635.

SAN'TORIN (anc. *Thera*), the southernmost island of the Cyclades, 32 miles S. of Naxos, has an area of 65 sq. miles and a pop. of about 15,000. Of late years an active volcano has broken out in the island. There was a violent eruption in April 1870, and in the same year the capital of the island, also called S., was destroyed by an earthquake. In 1866 a new volcanic island of considerable extent, known as *Aphroessa*, was thrown up in its neighborhood. Remains of very ancient buildings have recently been excavated.

SAO SALVADOR', AMBASSE', or BAN'ZA CON'GO, the principal town of Congo, on a plateau 1500 feet above the sea-level, and 120 miles inland from the mouth of the Congo river. In the 15th and 16th centuries, under Portuguese influence it attained great prosperity, and had Christian kings, a cathedral, and Jesuits' College. With the removal of these and the decline of Portuguese power, the town has relapsed almost into its original condition. Its present pop. is estimated at 20,000.

SARATOGA, BATTLE OF, an engagement of the American revolution, near Saratoga, N. Y. The Americans were under the command of Gen. Gates, and the English under Burgoyne, and the conflict resulted in the surrender of the latter, with his entire army of about 6000 men. This victory was of great importance to the Continental cause, disposing, as it did, of an invasion, planned on a large scale, and portentous of evil to the struggling colonies.

SAR'GENT is the name of more than one American family of talent and accomplishment. The first person of note bearing the name was WINTHROP S., born at Gloucester, Mass., 1st May 1753. He served with distinction in the War of Independence, was appointed by Congress surveyor-general of the North-West Territory (1786), was adjutant-general of St. Clair's expedition (1791) against the Miami Indians, took part in Wayne's expedition (1794–95), and was governor of Mississippi Territory in 1790 and in 1801. He was a member of the American Academy of Arts and Sciences, and of the Philosophical Society, and assisted Dr. B. S. Smith in preparing his *Papers relative to certain American Antiquities* (1796). He died 3d June 1820. His grandson, WINTHROP S., born at Philadelphia, September 23, 1825, was a lawyer by profession, but is best known as a scholar, antiquarian, and littérateur. He edited from original MSS., with an introductory memoir, *The History of Braddock's Expedition against Fort Duquesne* (1855), and several reprints of curious Revolutionary tracts. He left incomplete at his death (at Paris, May 18, 1870) a *Catalogue Raisonné* of books relating to America.—LUCIUS MANLIUS S., born at Boston, Mass., 25th June 1786, studied at Harvard, and devoted himself to the advocacy of social reforms, particularly temperance, for which he lectured and wrote copiously. He died at West Roxbury, 2d June 1867. See J. H. Sheppard's *Reminiscences of L. M. S.*—EPES S., born at Gloucester, Mass., 27th September 1812, was educated at Harvard, took to journalism, and was successively on the editorial staff of the *Daily Advertiser*, the Boston *Atlas*, the New York *Mirror*, and the *New Monthly Magazine*. About 1847 he settled at Roxbury, near Boston, and for several years edited the Boston *Transcript*. S. was a very miscellaneous and prolific writer. Died in 1880.—JOHN OSBORNE S., brother

of the preceding, born at Gloucester, Mass., in 1810, studied at Harvard, passed for the bar, and practised several years at Boston, sat in the Massachusetts Legislature 1835–36, but has mainly devoted himself to political journalism. He has written several pamphlets on legal and political questions, but his most important contribution to literature is his essay, *Improvements in Steam Navigation and the Arts of Naval Warfare* (1844), containing a biographical sketch of John Ericsson.

SARTO'RIUS, Georg, Freiherr von Waltershausen, a German historian, was born at Kassel, 25th August 1765, and died 24th August 1828. His most important work is *Geschichte des Hanseatischen Bundes* (3 vols. Gött. 1802–8), to which his *Urkundliche Geschichte des Ursprungs der Deutschen Hansa bis zum 13. Jahrh.*, edited by Lappenberg (2 vols. Hamb. 1830), forms a valuable addition.—Wolfgang von Waltershausen S., son of the preceding, and a distinguished geologist, was born at Göttingen, December 17, 1809. Subsequently to 1833, when he completed his university course, he made several journeys in the interests of science, and was, in 1847, appointed professor of geology and mineralogy in the university of his native town. In 1859 he traveled in Russia, and in 1864 went for the third time to Sicily, where also he resided 1869–70. He died at Göttingen, October 16, 1876.

SASSERAM' (Sahsram), a town in the district of Shahabad, Bengal, British India, situated beneath the Kymnr hills, 72 miles S E. of Benares, and 60 S. of Arrah. Pop. (1872) 21,023. It was the birthplace of the Afghan Emperor Shere Shah, who expelled the Mogul Humayun, the father of Akbar, from Delhi in 1539. It contains the tomb of Shere Shah's father, and also of Shere Shah himself; the latter is a handsome structure, erected on an island in an artificial lake. There is still a large Mohammedan population at S. The exports are valued at £6000, the imports at £20,000.

SATSUMA WARE, a fine kind of pottery or semi-porcelain made in Japan, having a felspathic glaze of a light straw color, the surface of which is covered with a net-work of fine cracks. Red and green colors and dulled gold are employed for decorating S.W., a favorite ornament being the chrysanthemum, and pheasants and other fowls are also frequently introduced. Fine old S.W. is highly esteemed by collectors.

SÁTTÁRA, the chief town of the district of the same name, in the Bombay Presidency, British India, situated in the highlands of the Deccan, 115 miles S.E. of Bombay, and 55 S. of Poonah. Pop. (1872) 24,484. It lies in a hollow commanded by a very strong fort, which was captured by the British in 1818.—The *district* of S., which is bounded W. by the Western Ghauts, has an area of 5378 sq. miles. Pop. (1872) 1,116,050. This tract was ethnologically the cradle of the Mahratta race; and the great Sivaji established himself at the fort of S. about 1660. Here his descendants maintained themselves, though with diminished powers, as the nominal leaders of the Mahratta confederacy until 1848. In that year the last Rajah died without issue; and his deathbed adoption was set aside by Lord Dalhousie, the Governor-General of India, in accordance with the then accepted doctrine of lapse. The chief crops are millets, rice, cotton, wheat, sugar-cane, and tobacco. The only manufacture is cotton-weaving. S. suffered severely during the famine of 1877, especially in loss of cattle.

SAUROP'SIDA, one of the primary groups of *Vertebrate* animals represented by reptiles and birds. The two classes are closely connected by structural affinities. *Lungs* constitute the sole breathing organs of the group, no gills being developed. The exoskeleton consists of scales or feathers. The bodies of the vertebra are alwas well ossified. The skull is joined to the vertebral column by a single *condyle* or articulating process, whilst two such condyles occur in mammalia. The *lower jaw* of S. is compound, each half consisting of several pieces. The lower jaw is further articulated to the skull by means of a special bone, the *quadrate bone*, which in mammalia is represented by the *malleus* of the ear. The 'ankle-joint' of S. is 'situated not between the tibia and astragalus, as in all mammalia, but between the proximal and distal divisions of the tarsus' (Huxley). The *digestive system* of S. ends in a *cloaca* chamber common to the efferent ducts of the urinary, digestive, and generative systems. A four-chambered heart exists in some S. (crocodilia and birds), other S. possessing a three-chambered heart only. No complete *diaphragm* separates the thoracic from the abdominal cavity. The *Wolffian bodies* of the embryo S. are replaced by true *kidneys*, as in mammalia, and the *cerebral hemispheres* are never united by a *corpus callosum* or connecting band of nervous tissue. An *amnion* and *allantois* are developed in the embryo, but no *mammary glands* are developed in the S. In their *reproduction* the S. are invariably oviparous, or egg-producing. Some few are ovo-*viviparous*, *i. e.*, retain the eggs within their bodies until the young are hatched.

SAUTERNE' is the name of a class of French white wines produced in the Gironde district. The grapes from which S. is made are allowed to become dead ripe before they are collected. The principal growths of S. are Barsacs, Santernes, and Bommes, and the Château Yquem S. is one of the finest wines grown in France. Recently a sparkling S. has been introduced, prepared according to the Champagne method.

SAV'AGE, James, LL.D., historian and politician, was born at Boston, Massachusetts, July 13, 1784. Graduating at Harvard in 1803, he commenced his law studies in 1807, and subsequently sat in both houses of the Massachusetts legislature, besides filling several municipal posts at Boston. He was for some years the president of the Massachusetts Historical Society, editing several volumes of their *Collections*, and publishing from the original manuscript Wynthrop's *History of New England* (1825–26). He also edited Paley's *Works* (5 vols. 1828), contributed various articles historical and political to the *North American Review* and the *New England Magazine*, and wrote a number of pamphlets. His most important work is a *Genealogical Dictionary of the First Settlers of New England, showing Three Generation of those who came before May*, 1692 (4 vols. 1862–64), a work which, though deficient in plan and execution, is of great value and displays much research. S. died at Boston, March 8, 1873.

SAV'ILE, Sir Henry, was born at Over Bradley, near Halifax, Yorkshire, England, November 30, 1549. He studied at Brasenose College, Oxford, and afterwards at Merton College, where he graduated in 1570, and was elected fellow. In 1578 he made a tour on the Continent, and on his return became Greek and mathematical tutor to Queen Elizabeth. In 1596 he was chosen provost of Eton, and in 1604 was knighted by James I. He was warden of Merton College from 1585 to his death, which took place February 19, 1622. His fortune he devoted to the advancement of learning, founding in 1619 two professorships (in geometry and astronomy) at Oxford, known as the Savilian professorships.

SAXE, John Godfrey, LL.D., an American poet, born at Highgate, Vt., June 2, 1816, and graduated from Middlebury College in 1839. He practiced law, was for a time engaged at editorial work, and then removed to Brooklyn. He published several volumes of humorous poems, which have had an exceedingly large sale.

SAY, Thomas, an American naturalist, was born at Philadelphia, July 27, 1787. He began life as a druggist but subsequently devoted himself to natural history, and was zoologist to several American exploring expeditions between the years 1818 and 1823. In 1825 he joined Maclure and Owen in their socialistic experiment at New Harmony, Indiana, where he died, October 10, 1834. His *Complete Writings on the Conchology of the United States* were published at New York in 1858, and his *Complete Writings on the Entomology of the United States*, with a Memoir by George Ord, in 1859.

SAYRE, Lewis Austin, M.D., a distinguished American surgeon, born at Madison, N. J., Feb. 29, 1820, and graduated from the University of Transylvania in 1837. He pursued his medical studies in New York, began to practice there, and rapidly gained distinction in his profession. He was professor of orthopedic surgery in Bellevue Hospital Medical College, and made a specialty of the treatment of deformity.

SCA'LAR, a mathematical term invented by Sir W. R. Hamilton, including all quantities essentially non-directional. All numbers and the ordinary symbols of algebra and analysis which are subject to the same laws as these are scalars.

SCALA'RIA, a well-known genus of *Gasteropodous* Mollusca, including the Wentletraps, of which the most famous species is the Precious Wentletrap or Royal Staircase (*S. pretiosa*), a good specimen of which, in the days of conchological pursuits, fetched as much as $250. This species is found in tropical seas. The common S. or Wentletrap (*S. communis*) is plentiful on the British coasts. The shells in S. are tubular, spiral and turreted in shape. The foot is short, and in the true Wentletraps the whorls or turns of the shell are distinct. In some of the *Scalariæ* there is a gland secreting a purple color like that obtained from the famous purple whelk of Tyre.

SCARUS, a genus of Teleostean fishes, including those species which browse on coral-polypes, and which are named 'Parrot fishes.' They are allied to the *Labridæ* or *Wrasses*, and their jaws are incrusted with numerous minute teeth.

SCHAFF, Philip, LL.D., was born at Coir, Switzerland, Jan. 1, 1819. He studied at Coir, Stuttgart, Tübingen, Halle, and Berlin, where he graduated B.D., and subsequently (1842–44) lectured in the university on exegesis and church history. In 1844 he was called to America as professor in the theological hall of the German Reformed Church at Mercersburg, Pa. In 1863 he removed to New York, and in 1870 became professor of sacred

literature in the Union Theological Seminary in that city. He is a member of various historical and literary societies in Europe and America, is an active promoter of the Evangelical Alliance, and president of the American Bible Revision Committee.

SCHARN'HORST, Gerhard Johann David von, a Prussian general, was born at Hämelsee, in Hanover, Nov. 12, 1756. He entered the Hanoverian army in 1776, was made teacher in an artillery-school (1782), and served against France as chief of a battery in 1793. In 1801 he entered the Prussian service, and became director of the military academy of Berlin. Raised to the staff in 1804, and subsequently to the rank of a general, he was present at the battles of Auerstädt and Eylau. After the Peace of Tilsit in 1807, he was placed at the head of the administration of Prussian military affairs. Together with Gneisenau he skillfully evaded the provision in the Treaty of Paris (1808), limiting the Prussian army to 42,000 men, and by training fresh bodies of men in relays, raised the number actually to 271,000. He accompanied Blücher as chief of the staff in the campaign of 1813. On May 2, 1813, he was wounded at Grossgörschen, and died June 28 of the same year at Prague when on his way to Vienna to persuade Austria to join the allies against Napoleon.

SCHERN, Alexander, J. B., born in Germany, in 1826, educated at Bonn and Tübingen, and came to America, in 1851, where he has since been engaged in teaching and literary work. He is a scholar of large information, and has attained high reputation as a writer for various encyclopædias.

SCHMER'LING, Anton, Ritter von, an Australian statesman, was born at Vienna, 23d August 1805. After a complete study of law he entered the service of the state in 1829, and was in 1846 appointed 'Appellationsrath' at Vienna. A prominent opponent of the policy of Metternich, S. was sent to Frankfurt in April 1848 as Austrian agent, became president of the 'Bundestag' (19th May), and from the 15th July to the 15th December was foreign minister under the 'Reichsverweser.' After this he was appointed Austrian plenipotentiary at Frankfurt, and continued to be the parliamentary leader of the 'Great German Party,' till, finding his efforts unavailing, he withdrew in April 1849 and returned to Vienna. From July of the latter year S. was Austrian Minister of Justice, but in January 1851 he resigned office, being unwilling to accept a reactionary policy, and became President of the Senate. On the 13th December 1860 he was re-appointed minister, to direct the changes consequent on the 'diploma' of the 20th October. The constitution of February 1861 was mainly his work. Failing, however, to establish the complete constitutional unity he aimed at, S. resigned on the 27th July 1865, and became first president of the supreme court at Vienna. In 1867 he was appointed life member of the Upper House.

SCHMITZ, Leonhard, an industrious German philologist, was born at Eupen, near Aachen, in 1807, studied at Bonn under Niebuhr and Welcker, and after some experience in teaching went to England. He was rector of the Edinburgh High School from 1845 to 1866, when he became principal of the London International College—a post which he held till 1874, when he was appointed classical examiner to London University. He has translated Niebuhr's Lectures (8 vols. 1844–53), and Zumpt's *Latin Grammar*, edited the *Classical Museum* (1844–50), contributed to Smith's Classical Dictionaries and to the *Encyclopædia Britannica*, and written several school histories.

SCHNEIDER, Eugene, a distinguished French manufacturer and politician, born at Nancy, in April 1805. His parents were poor, and S. betook himself to business at an early age. In 1830 he was entrusted with the management of the Bazeilles foundries, and some years later, along with his elder brother, became manager of the engineering works at Creuzot. Under S. these works ultimately attained a vast expansion, employing not fewer than 12,000 hands, and producing most of the government arms, and of the locomotives and steam-engines in use on the French railways. S. entered political life in 1845, was elected in 1852 a Bonapartist candidate to the Chamber of Deputies, of which he became one of the vice-presidents. From 1867 to 1870 he was regularly named president by the Emperor at the opening of each session, and discharged his difficult duties with energy and tact. S. died November 30, 1875. A monument erected to him at Creuzot was subscribed for by 25,000 persons, and unveiled in January 1876.

SCHNEIDER, Hortense Catharine, a French actress, born at Bordeaux about 1835, played at the age of fifteen in *Michel et Christine* at the Athénée of her native city. In 1856 she made a successful début at Paris in *Le Chien de Garde* at the Théatre des Variétés. Her popularity was increased by her performances at the Théâtre du Palais Royal after 1858, and finally she excited a furore by her acting in *La Belle Hélène* (1864) and *La Grande Duchesse de Gérolstein* (1867). In 1868 Mme. S. appeared on the London stage and was immensely popular. In 1869 she rejoined the Opera-Bouffe at Paris.

SCHÖFFER, Peter, born at Gernsheim, near Darmstadt, between 1420 and 1430, studied at the University of Paris, where he was a copyist in 1449. In 1450 he removed to Mainz, where he became the son-in-law of Johann Faust. According to a passage in Trithemn's *Chronicon Monasterii Hirsaugensis* (2d ed., 2 vols., St. Gall, 1690), written on the authority of S.'s grandson, S. 'perfected the art of printing, by devising an easier mode of casting types.' This is generally believed to have been the invention of the punch and matrix, in which Lambinet says, 'is the essence of the art of Printing.' S. died in 1502. In 1836 a monument was erected to him at Gernsheim. See A. Bernard, *Histoire de l'Imprimerie en Europe*.

SCHOFIELD, John M., an American soldier of distinction, was born in Chautauqua county, New York, September 29, 1831. He was educated at the West Point Military Academy, in which he was professor of natural philosophy from 1855 to 1860. At the outbreak of the Civil War he held a similar position in the Washington University, St. Louis. As major-general of volunteers and afterwards brigadier-general in the regular army, he served under Sherman in his Georgian campaign, and under Thomas in Tennessee. In 1865 he held an independent command in N. Carolina, where he gained the battle of Kinston. He was Secretary of War in 1868–69, when he was promoted to be major-general. After holding military commands in Missouri and on the Pacific coast, he became superintendent of the West Point Military Academy in 1876.

SCHOUW, Joachim Frederik, a famous Danish botanist, was born at Copenhagen, 7th February 1789. In 1808 he commenced the study of law. After a tour in Norway (1812) with the botanist Chr. Smith, he entered the state-service as a chancery clerk in 1813, became Professor of Botany at Copenhagen in 1820, and in 1841 director of the Botanic Garden. He died 28th April 1852.

SCHURZ, Carl, an American statesman, was born, 2d March 1829, at Liblar, near Köln, and educated at Bonn. He was involved along with Professor Kinkel in the revolutionary outbreaks in Germany in 1848–49; was imprisoned and escaped to Switzerland; but returned under an assumed name to Berlin and assisted Kinkel to escape from Spandau in 1850. He then went to Paris and London, and in 1852 married and emigrated to America. Here he soon became prominent as leader of the German element in the Republican party. In 1858 he made his first speech in English, and attracted much attention by a series of lectures in New England in 1859–60. President Lincoln appointed him United States minister to Spain in 1861, but he resigned the same year and returned to Ameriea to take a prominent part in the war, rising to the rank of major-general on the Union side. In 1866 he visited the Southern States as Special Commissioner, and published a masterly report on their condition. After editing successively the *Detroit Post* and the *Westliche Post* at St. Louis, he was elected United States Senator for Missouri from 1869 to 1875. He was among the supporters of Horace Greeley for the Presidency in 1872, and in 1875 actively supported the candidature of President Hayes. Twelve of his principal English speeches were published at Philadelphia in one volume (1865). In 1884 he opposed James G. Blaine, and supported Grover Cleveland, the Democratic candidate for the presidency.

SCHUYL'ER, Philip, an American general and statesman, was born of a wealthy family at Albany, 20th November, 1733. He held some minor military command under the colonial government of New York, and on the outbreak of the Revolutionary War was appointed major-general and placed in command of the northern department. The failure of an expedition against Canada, and the insinuations it called forth, led him in 1777 to demand a court of inquiry, which entirely acquitted him of blame. But the events which preceded the battle of Saratago in 1777 again raised complaints against him, and before the battle was fought he was superseded by General Gates, though he remained with the army. Another court of inquiry again freed him from all blame, but he resigned his military commands. From 1778 to 1781 he was a member of Congress, and in 1789 he was appointed United States senator for New York. He died at Albany, Nov. 18, 1804. See his *Life and Times*, by B. J. Lossing (2 vols. 1860–62; new ed. 1872).

SCHWAB, Gustav, a modern German poet, born at Stuttgart, June 19, 1792, studied at Tübingen (1809–14), traveled through N. Germany, associating at Berlin with Fouqué and Franz Horn, and in 1817 became professor of ancient literature in the Upper Gymnasium at Stuttgart, in 1837 pastor at Somaringen, and in 1842 at St. Leonhardskirche in Stuttgart. Here he died November 4, 1850. His poems, first appearing in periodicals and almanacs, were collected in two vols. at Stuttgart (1828–29), and a *Neue Auswahl* was published in 1838 (4th ed. 1851). His ballads and romances are by far his best poems; in them he approaches nearer

to Uhland than any other poet of the Swabian school. See S.'s biography by Klüpfel (3d ed. 1861).

SCHWEG'LER, Albert, a member of the Tübingen school of German theology, was born at Michelbach in Würtemberg, Germany, February 10, 1819. After studying at Tübingen (1836–40), he became in 1842 parish vicar at Bebenhausen, but resigned his charge in 1843, when he became a *privat-docent* in philosophy and classical philology at Tübingen. He received in 1848 the extra-professorship of Roman Literature and Antiquities, and still later that of Ancient History. He died January 5, 1857. *Die Geschichte des Philosophie*, his best-known work (Stuttg. 1848; new ed. 1857), has been translated into English by Professor J. H. Seelye of Amherst (New York, 1856).

SCHWEIN'FÜRT GREEN (Ger. *Wienergrün*), aceto-arsenite of copper, is a velvety green pigment, more brilliant, lighter, and less affected by damp than Scheele's Green, as a substitute for which it is employed. It was discovered at Schweinfürt in 1814, and is prepared by fusing arsenious acid and acetate of copper. It is used in Paris for tinting fabrics for artificial flower-making, is known in commerce as *Paris Green, English Green, Emerald Green, &c.*

SCHWER'IN, Kurt Christoph, Graf von, a distinguished general of Friedrich the Great, was born in Swedish Pommern, October 16, 1684. After studying at Leyden, Griefswald, and Rostock, he entered the Dutch service as ensign in 1700. In 1704 he fought under Marlborough and Prince Eugene, became captain in 1705, and next year entered the service of the Grand Duke von Mecklenburg. In 1711 he was despatched on a secret mission to Karl XII. at Bender, and in 1719 settled favorably for the Duke his quarrel with the nobility, after defeating their army at Waltmühlen. In 1720 he entered the service of Prussia, acted as governor of Peiz, and in 1740 was ennobled by Friedrich II., appointed field-marshal, and raised to the command of the right wing in the first Silesian War. He contributed greatly to the victory at Mollwitz in 1741, and on the conclusion of the peace was appointed governor of the forts Neisse and Brieg. On the outbreak of the second Silesian War he invaded Bohemia, and directed the siege of Prag, which fell September 16, 1744. In 1756, on the outbreak of the Seven Years' War, he took the command of the third Prussian army, and prevented the junction of Generals Piccolomini and Browne, but fell in the storming of the Austrian camp before Prag, May 6, 1757. S. was the most popular general in the Seven Years' War. A marble monument was erected by the king to his memory in the Wilhelmsplatz in Berlin, and his name is still commemorated in the popular songs of Germany. See *Leben des Grafen von S.* (Berl. 1790).

SCLEROLASIC CORAL (from Gr. *skleros*, 'hard,' and basis, a 'base'), the name given to corals, of which the Red coral (*Corallium rubrum*), the *Isis* or Mare's-tail coral, the Gorgonias, &c., are good examples, and in which the living polypes are situated on the *outside* of the coral substance. These polypes, as a rule, belong to the order *Alcyonaria* of the *Cœlenterate* group, and have eight fringed tentacles. The S. C. varies in composition. It may be hard and limy, as in Red coral, or horny as in Gorgonias, or partly limy and partly horny as in Isis. Although the S. C. is situated within the animal tissues which form it, it is in reality placed *external* to the bodies of the animals which coat it. The S. C. is formed by the *bases* or lower portions of the polypes, and is not secreted by their internal parts as in the opposite or *sclerodermic* coral. The latter is secreted within the bodies of the polypes; it exists outside the living parts, and exhibits distinct cups or *calyces* in which the soft parts are protected. These cups are wanting in the S. C. The *Sclerodermic forms* are the reef-building corals.

SCOLE'CIDA, an important division of the animal kingdom, including those animals known as parasitic worms, but which are removed by their structure from the true worms or *Annelida*. The exact zoological position of the S. is still a matter of dispute. By many zoologists they are placed as one of the two divisions of the sub-kingdom *Echinozoa* or *Annuloida;* while others regard the S. as more properly forming a section of the lower Annulosa under the heading *Vermes* or worms. The characters of the S. are derived from the usual absence of lime in their integument, and from the possession of a *water-vascular system*. The nervous system consists of one or two ganglia, closely situated together. In this heterogeneous group are included the *Platyelmia* or flat worms; the *Nematelmia*, or round worms; and the *Rotifera* or wheel animalcules. The *Platyelmia* includes the *Tænida* (tapeworms); *Trematoda* (Flukes) and *Imbellaria*. The *Nematelmia* are represented by the *Nematoda; Gardiacea* (see *Gordius*); and *Acanthocephala* or 'thorn-headed' worms.

SCOR'PION-FISH, or SEA SCORPION, the name given to Teleostean fishes belonging to the *Triglidæ* or Gurnards. The red S.-F. (*Scorpæna scrota*) is found on the British coasts, and in the Mediterranean Seas, where the spotted S.-F. (*S. porcus*) also occurs. The average length is from 12 to 18 inches.

SCOTT, Sir George Gilbert, R.A., F.S.A., was born in 1811 at Gawcott, Buckinghamshire, of which village his father was perpetual curate. Placed in his seventeenth year with an architect, Mr. Edmeston, he commenced practice on his own account in partnership with a fellow-student, Mr. W. B. Moffatt, and in 1841 designed the work that first brought him prominently into notice, the Martyr's Memorial, Oxford. A year later he gained the competition for rebuilding the great Nikolaikirche at Hamburg; in 1848 was chosen to design a cathedral for St. John's, Newfoundland, and in 1854 undertook the restoration of Doncaster parish church, while as architect to the Dean and Chapter of Westminster since 1849, he erected the gate-house and restored the chapterhouse of the Abbey. He was elected A.R.A (1855), R.A. (1861), and President of the Institute of British Architects (1873); amongst his works during this period being the Foreign Office (in the execution of which design he was unfortunately hampered by Government), the chapels of Exeter College, Oxford, and St. John's College, Cambridge, Glasgow University buildings, the Albert Memorial, Hyde Park (which gained him the honor of knighthood, 1872), and the Albert Chapel, Windsor, besides the restoration of cathedrals and churches through England's length and breadth. According to a list in the *Builder* (6th April 1878), S. built or restored, since 1847, 26 cathedrals, 9 abbey and 2 priory churches, 1 minster, 474 churches, 26 schools, 5 almshouses, 23 parsonages, 57 monumental works, 10 college chapels and 16 colleges, 27 public buildings, 42 mansions, &c. He died at Courtfield House, S. Kensington, 27th March 1878, being at the time engaged on the restoration of the cathedral of St. Alban's, and the erection of St. Mary's Cathedral, Edinburgh.

SCOTT, Thomas, D.D., the Biblical commentator, was born at Baytoft, near Spilsby, Lancashire, England, February 16, 1747. By hard private study he qualified himself for the ministry of the Church of England, and was ordained in 1772. In 1780 he became curate of Olney, where he made the acquaintance of Cowper. In 1785 he was appointed chaplain of the Lock Hospital, and in 1801 vicar of Aston Sandford, Buckinghamshire, where he died April 16, 1821. He was a strong Calvinist, and wrote, among other works, a *Vindication of the Divine Inspiration of the Scriptures*, a reply to Tom Paine. His reputation, however, rests upon his popular *Family Bible with Notes* (1796), which has been frequently reprinted both in England and the United States.

SCRIV'ENER, Frederick Henry Ambrose, LL.D., born at Bermondsey, England, 29th September 1813, passed from St. Olave's Grammar School, Southwark, to Trinity College, Cambridge, where he gained a scholarship (1834), graduating B.A. (1835), and M.A. (1838). After holding an under-mastership at Sherborne, and the curacy of Sandford Orcbas, he became in 1846 head-master of Falmouth School and incumbent of Penwerris, and in 1861 was presented to the rectory of Gerrans, Cornwall. A member of the Company of Revision of the New Testament since 1870, he received in 1872 a pension from Government, and from the University of St. Andrews the honorary degree of LL.D.

SCUDDER, Horace Elisha, an American author, born at Boston, Mass., in 1838, and educated at Williams College. He has resided at New York and Boston, and has written much for the press, besides numerous works for young people. He is the author of the well-known Bodley Series.

SEA'BURY, Samuel, D.D., the first American bishop of the P. E. Church, born at Groton, Conn., Nov. 30, 1729, and graduated from Yale College in 1748. He was ordained in London in 1753, presided over several churches in America, and during the war of the Revolution was a royalist. In 1784 he went to England, and was consecrated Bishop of Connecticut, at Aberdeen, in that year. Died at New London, Conn., Feb. 25, 1796.

SEA-DRAGON, a name given to various Teleostean fishes, such as the *Pegasus draco* belonging to the *Lophobranchii;* and to the Dragonets (*Callionymus*), allied to the Gobies. They occur in the seas of the E. Archipelago. The Pegasus is a fish whose wide breast and large pectoral fins have suggested the name S.-D. *P. natans* is another species, with smaller fins.

SEAL-ENGRAVING. The engraving of seals, when they are cut in hard agate stones, is performed with the same implements and by like processes used in cutting cameos and intaglios in similar stones. The larger official and other seals which are cut in steel, &c., are prepared after the manner of dies.

SEA-SURGEON, a *Teleostean* fish—the *Acanthurus chirurgus* of naturalists—found in the Atlantic Ocean and Caribbean Sea, and deriving its name from the lancet-shaped spine on each side of the body, and at its tail-extremity. The length is from 12 to 18 inches. The color is a brown of varying shades.

SEATTLE, in King Co., Washington Territory, at the head of Elliott's Bay and the mouth of the Duwamish River. It is the terminus of the Columbia & Puget Sound Railroad. Lumbering, agriculture, and coal miningare the principal pursuits. Pop. 8000.

SEA-WOLF (*Anarrhichas lupus*), a species of Teleostean fishes allied to the Blennies. It may attain a length of from 4 to 7 or 8 feet. The color is a brownish grey above, with brown stripes, and white below. In its habits this fish is fierce and predatory. It has a formidable array of teeth, and is said to attack the fishermen on being taken in their nets. The S. W. occurs on the British coasts, in the Mediterranean Sea, and in southern waters.

SEBA'CEOUS GLANDS. the name given to the minute sacs lodged in the lower layer of the *dermis*, or true skin. Each consists of a sac-like extremity from which a little duct leads, opening either on the surface of the skin or into the *follicles* of the hairs. The S. G. are most numerous in the face and scalp, but they exist in large numbers in the skin surrounding the nose, mouth, anus, ears, &c. None occur in the palms of the hands and soles of the feet. The sac-like extremity consists of from five to twenty little divisions. The largest S. G. are those of the eyelids, otherwise named *Meibomian glands*. The function of these glands is that of secreting *sebaceous matter*, a secretion of use in keeping the skin moist, and which also contributes to the nourishment of the hairs.

SECCHI, Angelo, an Italian astronomer and meteorologist, was born at Reggio, June 29, 1818, and entered the order of the Jesuits in 1833. After holding for some years the chair of physics in Georgetown College, Washington, D. C., he returned to Italy, and in 1850 became professor of physics in the Collegio Romano at Rome. When the papal states were finally taken out of the hands of the Church, S. was offered the chair of astronomy in the new Roman University, which he accepted, but was ultimately compelled to resign in obedience to the command of the chief of the Jesuits; and even the efforts of the king to effect a compromise, so as to give S. ample opportunity for the carrying out of his astronomical researches, were unsuccessful. He devoted himself chiefly to the study of the sun's surface, and materially added to our knowledge of its constitution by his spectroscopic observations. S. was one of the observers of the total eclipses of 1860 and 1870; and in 1867 received the great French prize of 100,000 francs for his labors. He died February 26, 1878. His chief work, *Le Soleil* (Par. 1870; Ger. 1872), details the latest solar discoveries. His numerous memoirs upon subjects in the various branches of physics and meteorology attest his scientific grasp of mind and his rare industry. In 1878 there appeared a German translation of his work on the Fixed Stars, and his *Meteorologia Romana*. published by the Italian Government.

SECESSION, Doctrine of, an American political theory, that any state had the right, at any time, to withdraw from the Union, as it existed under the Constitution. This theory was strongly advocated by John C. Calhoun, and many of the statesmen of the South. The question was brought to a test by the civil war, and its result has decided that no state can secede from the Union at its own pleasure.

SECUNDRA or SEKUNDER, a village in the district of Agra, N.W. Provinces, British India, 7 miles from Agra, named after the Pathan Emperor, Secundra Lodi. It is celebrated for the magnificent tomb of Akbar the Great, still in good preservation. The building is surrounded by a garden, and consists of a series of sandstone terraces, supporting a marble mausoleum. The architecture appears to be a combination of the Saracenic and Hindu styles. Close by is the tomb of Munni Begum, the Portuguese wife of Akbar. The building was for many years the headquarters of the Church Missionary Society, and afforded shelter to 300 orphans in the famine of 1838.

SEDALIA, a town of Missouri, in a high prairie country, within 3 miles of a tributary of the Missouri, and 40 miles S. of the main stream. It is the point of intersection of three railway lines, and is by rail 189 miles W. of St. Louis, and 100 E. of Kansas City. It has large railway works, flour-mills, iron-foundries, woollen-mills, &c., 2 daily newspapers, and a street-railway (since 1876). There are rich coal-mines in the vicinity. S. was only founded in 1860, and in 1870 had a pop. of 4560, and in 1877 of 10,000. Present pop. 12 000.

SEDG'WICK, Adam, LL.D., F.R.S., one of the fathers of geology, was born at Dent, Yorkshire, England, in January 1786. He entered Trinity College, Cambridge, and graduated in 1808 as fifth wrangler. In 1810 he was elected Fellow in his college, of which at his death he was senior member. In 1818 he succeeded Hailstone as Woodwardian professor of geology at Cambridge, was elected a Fellow of the Royal Society the succeeding year, aided in founding the Cambridge Philosophical Society about the same time, and subsequently became a Fellow of the Geological Society of London, of which he was President in the years 1829–31. In 1827 he made a geological tour in Scotland; and two years later accompanied Murchison through Germany, Austria, and Switzerland. With Murchison he subsequently was involved in a bitter controversy regarding the use of the terms Cambrian and Silurian. To the end of his long life he occupied a leading position amongst geologists, devoting his great energies to the elucidation of Palæozoic formations, and by his lectures, which he delivered during fifty years, forming a band of enthusiastic disciples. He was an active member of the British Association, and a keen opponent of the Evolution theories advanced by Darwin, Spencer, and others. A Liberal in politics, he took a hearty interest in all questions of University reform, and published a valuable essay, entitled *Discourse on the Studies of the University of Cambridge* (1834; 5th ed. 1850). S. died at Cambridge, January 25, 1873.

SEDGWICK, John, an American general, born at Cornwall, Conn., Sept. 13, 1813, and graduated from West Point in 1837. He served in the Mexican War, and was present at the siege of Vera Cruz, and the battles of Cerro Gordo, Churubusco, Molino del Rey, Chapultepec, and at the capture of the City of Mexico. For his gallantry, he was promoted to the rank of major. In 1861 he was made brigadier-general U. S. volunteers, and participated in the battles of Yorktown, Fair Oaks, Savage Station, and Glendale. In 1862 he was major-general U. S. volunteers. At Antietam, he was wounded three times, was present at Fredericsburg, participated in the battles of the Wilderness, and was shot and killed at Spottsylvania.

SED'LEY, Sir Charles, born at Aylesford, Kent, England, in 1639, educated at Oxford, became a court wit after the Restoration. He was a great favorite with Charles II., his recommendations being that he had no morals, did not ask favors, and had a knack for turning loose thoughts into dulcet verse. As he grew older, serious business obtained attention from him, and in Parliament he uniformly opposed the unconstitutional policy of James II. That monarch dishonored S.'s daughter by making her a countess; and S. was in consequence of this disgrace one of the chief promoters of the Revolution. He died August 20, 1701. His amatory poems—translations from the classics, parliamentary speeches, and plays—the best are *The Mulberry Garden* (1668), *Antony and Cleopatra* (1677)—may be found in his collected works (2 vols. 1722).

SEE'LEY, John Robert, an English historical and theological writer, and the son of a well-known publisher, was born in London in 1834. He was educated at the City of London School, and graduated B.A. at Christ's College, Cambridge, in 1857, when he was bracketed Senior Classic, and obtained the Senior Chancellor's medal. In the following year he was elected a fellow of his college, where he lectured for some two and a half years, and after holding the appointment of classical assistant to his old school, was chosen professor of Latin in University College, London, in 1863.

On the recommendation of Mr. Gladstone he was appointed in 1869 to succeed Charles Kingsley in the chair of modern history at Cambridge. His principal work, *Ecce Homo, or the Life and Work of Jesus Christ*, was published anonymously in 1866, and had reached a 13th edition in 1876. So far as it is argumentative, it attempts to eliminate the divine element, and to emphasize and elevate the humanity of Christ; but though vulnerable as a dogmatic thesis, it has obtained a permanent place in literature as a masterly piece of portraiture, radiant in color and touched with the tenderness of love. *Ecce Homo* startled the orthodox world by the earnest tone of its discidence, and called forth numerous replies, chief of which was that of Mr. Gladstone.

SEELY, Julius Hawley, S.T.D., LL.D., an American educator and writer, born at Bethel, Conn., Sept. 14, 1824, and graduated from Amherst College in 1849. He entered the ministry of the Reformed (Dutch) Church, and was for a time pastor of a church in Schenectady, N. Y. In 1858 he became professor of mental and moral philosophy in Amherst College, and in 1876 was made president of that institution, which position he still holds (1884).

SELMA, in Dallas Co., Ala., on the Alabama River, 300 miles from its mouth. It is surrounded by a cotton-growing district; is the center of a trade in cotton, lumber, iron, and coal; and is the terminus of six railroads. Pop. 7529.

SEL'WYN, George Augustus, D.D., born at Hampstead, England, in the summer of 1809, proceeded from Eton to St. John's College, Cambridge, where he distinguished himself as well by rowing seven in the first University Boat Race (1829), as by graduating second classic (1831). Elected fellow of his college, he resided at Eton as tutor to Lord Powis's son and curate of Windsor until 1841, when he accepted the newly-founded bishopric of New Zealand 'at a moment's notice,' says Mr. Gladstone, 'upon the call of duty tearing up the singularly deep roots which his life had struck into the soil of England.' Six-and-twenty years, broken by a single visit to England (1854), were spent in

frequent journeyings afoot and perilous cruises by sea, in warmly espousing the cause of the Maori remnant and building up a flourishing church on apostolic models. When in 1867 he again revisited England to attend the Lambeth Conference, he left behind him six suffragan bishops and seventeen native clergy, and with a good heart as Bishop of Lichfield could turn from Southern cannibals to minister to English navvies, bargees, and prisoners. He returned, however, to New Zealand in 1868, to set things in order for his successor, and was present at the General Convention of the American Church at Baltimore (1871) and New York (1874). In England he established diocesan synods, instituted a system of theological examinations, and lived in his own cathedral city, where he died 11th April 1878.

SEMI-ARIANS were the party in the Church in the 4th c. who desired to hold a middle course between Sabellianism, which converted the distinction between the persons in the Godhead into one of modes, and Arianism, which subordinated the Son to the Father so far as to make the former a creature of the latter. This was indeed what the Athanasian party desired to do, but the S.-A. considered that the expression *homoousios* ('of the same substance'), which had been adopted in the Nicene Creed (325) to express the relation of the Son to the Father, came dangerously near Sabellianism, and hence they adopted the phrase *homoiovsios* ('of similar substance'). The party was so strong that the Nicene Creed was only finally adopted as the doctrine of the Church at the Council of Constantinople (381).

SENACA FALLS, a town of Seneca Co., N. Y., on the Seneca River and the N. Y. Central Railroad, 43 miles from Syracuse. It has fine water power, which is employed in manufacturing agricultural implements, fire-engines, and other articles. Pop. 5880.

SERAJGUNGE, a town in the district of Pubna, Bengal, British India, on the right bank of the Brahmaputra river (or Jamuna as it is here called), 153 miles N.E. of Calcutta. Pop. (1872) 18,375. The houses are six miles from the low water channel of the river, separated by a sandy plain, and the river landing-places shift every flood-season. S. was founded about the beginning of the century, and is now the chief river-mart in Bengal, having risen with the growth of the jute trade. It collects jute, rice, oilseeds, tobacco, &c., from all the neighboring districts for despatch to Calcutta, and distributes piece-goods, salt, sugar, iron, hardware, &c. The trade is entirely water-borne. The steamers of the E. Bengal Railway Company carry away about 50,000 tons of jute annually, and native boats nearly twice as much.

SE'RES (anc. *Siris*, or *Sirrhæ;* Mid. Ages, *Serrhæ*), a town of European Turkey, in the vilayet of Saloniki, on a tributary of the Strymon or Karassu, 45 miles N.E. of Saloniki, lies in a wide and fertile plain containing upwards of 300 villages, is the seat of a kaimakam and a Greek archbishop, and is the most important trading town in the interior of Macedonia. S. has a castle, numerous mosques, Greek churches, baths, benevolent institutions, manufactures woollen and cotton goods, gourdshaped water-flasks, and exports cotton, rice, tobacco, and grain. Pop. 30,000.

SERGIJEV'SKIJ POSSAD', a market-town in the Russian government of Moscow, 42 miles N.N.E. of the city of Moscow, is noted as the seat of the very rich Trinity monastery named *Troiza Lavra*, whose possessions, before the abolition of serfdom, included 100,000 'souls,' for whom it received an enormous commutation. Pop. of S., with the surrounding district (*St. Petersb. Cal.*, 1878), 27,471.

SERINGHAM, an island formed by the branching of the Cauvery river, almost opposite the town of Trichinopoly in S. India, about 80 miles in a direct line from the Coromandel or E. coast. It is 20 miles long by 2 wide at the broadest, and was an important military position during the wars against the Frenchman Dupleix (1749–63). At its lower end is an *anicut* or weir, 1080 feet long and 40 broad, constructed for irrigation purposes by a Hindu prince 1600 years ago. In the same neighborhood are the irrigation works of Sir A. Cotton. The town of S., at the upper end of the island, is beautifully situated within four walls. Pop. (1871) 11,271. It is celebrated for a square pagoda, covering an area of 4 sq. miles, and composed of seven separate enclosures, which is the most frequented and wealthy shrine of Vishnu in S. India.

SER'PENTS, FASCINATION BY, a kind of mesmeric influence exercised by the rattlesnake, tree-snake, and other reptiles over their prey. Birds, squirrels, even antelopes, unable to resist the fascinator's glance, make no attempt at flight, or will absolutely draw nearer to the serpent's fangs, unless aroused by some sudden cry, or by the intervention of an obstacle. See Ellis, *Three Visits to Madagascar* (1858).

SERRA'NO Y DOMINI'QUEZ, FRANCISCO, DUQUE DE LA TORRE, a marshal and statesman of Spain, was born at San Fernando, near Cadiz, November 10, 1810. Entering the army in 1825, he rose rapidly, becoming a general of division before he was thirty. He began his political career in 1841, as a deputy in the Cortes for Malaga. In 1843 he joined Narvaez in effecting the overthrow of Espartero. In 1845 he became a senator, and soon obtained a marked influence over Queen Isabella. In 1847, on the accession of Narvaez to power, he was sent to Granada as Captain-General. He now turned liberal, was banished in 1854, for participation in the insurrection at Sarragossa, but returned the same year as a supporter of Espartero and O'Donnell. In the subsequent rupture between these two he sided with the latter. In 1857 he went as ambassador to Paris; and as Captain-General of Cuba in 1860–62 reannexed St. Domingo to Spain, an act which secured him a dukedom. In 1866 he was president of the senate, and strongly opposed Narvaez for the illegal prorogation of the Cortes. At the revolution of September 1868 he joined Prim and Topete, and shortly after became president of the council of ministers at Madrid, and commander-in-chief of the army.

On June 16, 1869, he was elected Regent by a large majority; and this post he held till Prince Amadeo of Italy was prevailed upon to accept the crown (January 2, 1871). S. then became Premier, but resigned in July of the same year; and in April of 1872 he entered the field against the Carlists, with whom he concluded the convention of Amorevieta. On the abdication of King Amadeo, and the proclamation of a republic in February 1873, S. fled to France, but soon returned, and after the *coup d'état* of General Pavia in January 1874, became chief of the executive. He again entered the field against the Carlists, compelling them to abandon their trenches before Bilbao on May 1. In December he once more took command of the Army of the North; but withdrew to Biarritz on the proclamation of Alfonso XII. as king by Martinez Campos (December 28, 1874). He returned to Madrid, however, in the course of a month.

SEX'UAL SELEC'TION, a biological theory first enunciated by Mr. Darwin as part of his hypothesis of Descent of Natural Selection. In this theory the propagation of the characters and variations of animals and plants is said to be largely due to the selection by the females, as mates of the best-favored and most brilliantly colored males, and to the battles of males for the females. Of this theory Darwin says:—'This form of selection depends, not on a struggle for existence in relation to other organic beings, or to external conditions, but on a struggle between the individuals of one sex, generally the males, for the possession of the other sex. The result is not death to the unsuccessful competitor, but few or no offspring. S. S. is therefore less vigorous than natural selection. S. S., by always allowing the victor to breed, might surely give indomitable courage, length to the spur, and strength to the wing to strike in the spurred leg, in nearly the same manner as does the brutal cockfighter by the careful selection of his best cocks.' The theory is combated by Mr. Wallace in his *Tropical Nature* (1878).

SEYMOUR, a town of Jackson Co., Ind., at the intersection of the Ohio & Mississippi and the Jeffersonville, Mo., & Indianapolis railroads. It is surrounded by an agricultural section. Pop. 5200.

SEYMOUR, HORATIO, an American statesman, born at Pompey, Onondaga Co., New York, May 31st, 1810. He was admitted to the bar in 1832, and in 1841 began his political career as a member of the State Assembly on the Democratic side. He was elected Governor of the State in 1853, and in 1854 vetoed a prohibitory liquor law, on which account he lost the Governorship in 1855, but was re-elected in 1862. In 1868 he was nominated for the Presidency, but was defeated, and has not since taken much part in politics.

SGRAFFI'TO (Ital. 'scratched'), a species of ornamentation in plaster wherein a design is scratched with a bodkin through a thin white coat, exposing a dark-colored substratum, which serves as a shadow. After being used as a means of decorating pottery, S. was employed for mural decoration and carried to great perfection in Italy in 15th and 16th centuries. Old examples of it exist at Padua, Mantua, Pisa, and many other Italian towns. S. has been revived of late years in Italy, Germany, and England for the decoration of buildings. At the South Kensington Museum in London the method pursued is as follows:—On a rendered surface of Portland cement a coat of dark-red plaster ¼ inch thick is laid, and while still moist it is covered with a thin layer of light-colored plaster 'floated' on evenly. The intended design is then traced with a style on the wet plaster, which is cut accordingly with a knife.

SHABB'ATHAI ZEWI, a Jew, born at Smyrna, 1641, was a convert to the fantasies of Isaac Luria, a great student of the Cabbala, who declared that he held intercourse with the prophet Elijah, and that he was the Messiah, the son of Joseph. The notion of two Messiahs occurs in the Talmud: a 'son of David,' and a 'son of Joseph,' the latter being the forerunner of the former, and destined to suffer death in the struggle with the enemies of the kingdom of God. S. Z. himself came forward first as a

prophet, and then gave himself out for the Messiah, and, notwithstanding that he was repudiated by the Rabbis, gained a large number of followers among his co-religionists. Although S. Z. was converted to Mohammedanism (1667) the sect survived, and still acknowledged him as the Messiah. This they were enabled to do by justifying his apostacy, which they did on the ground that 'the form of religion which he proclaimed stood as far above Judaism as it did above Christianity and Mohammedanism, was destined to absorb all the three, and consequently was indifferent to each one's particular usages.' One of the principal tenets of the sect was that the Talmud was full of errors and promoted immorality. From the great veneration they paid to the Cabbala, and especially the book Zohar, they received the name of Cabbalists or Zoharites. They acknowledged a Trinity in the Godhead, regarding Adam as an incarnation of the divine nature and the second Person, and their Messiah as the third. There are said to be some remnants of the sect still lingering in Poland and Turkey. See Franck, *La Kabbale* (Par. 1843), and Worman's *Historic Studies*, in Dickinson's *Homiletic Monthly*, July and August 1878.

SHAHABAD, a district in Bengal, British India, which lies S. of the Ganges and borders on the N.W. Provinces. Area, 4385 sq. miles; pop. (1872) 1,723,974. Away from the river forest-clad hills rise abruptly to the plateau of Central India. The inhabitants are largely Rajputs, who formerly enlisted in the Bengal native army and rose against the British in 1857. Arrah, the chief town of the district, was the scene of an heroic defence and final relief by Major Vincent Eyre. The stronghold of the Rajput ringleader at Jugdespore was razed to the ground. Other places are Sasseram and the hill fort of Rohtasgurh. In S. district are the head-works of the Sone Canal. In 1876–77 the registered exports, chiefly sugar, indigo, food-grains, and oil-seeds, were valued at £329,000; the imports, which included cotton goods, and salt, at £414,000. The district is traversed throughout its entire length by the E. Indian Railway.

SHAH ALUM ('king of the universe'), the last of the Mogul emperors of Delhi who exercised even a nominal independence, reigned from 1759 to 1806. For twelve years he was an exile, chiefly at Allahabad, where on 12th August 1765 he granted to the E. India Company the Dewanny of Bengal, Behar, and Orissa. In 1771 he put himself under the power of the Mahrattas, but in 1788 a Mohammedan rebel, Ghulam Kadir, seized Delhi and with his own dagger struck out the emperor's eyes. The Mahratta chief Scindiah avenged this crime; and Lord Lake in 1803, after defeating the Mahrattas outside Delhi, placed S. A. in a position of comparative affluence during the three last years of his long and miserable life.

SHAM'LI, a town in the district of Muzuffernuggur, N.W. Provinces, British India, on the E. Jumna Canal, 24 miles W. of Muzuffernuggur. There is some trade and manufacture, but the people suffer from malaria caused by bad drainage. Pop. (1872) 9177. During the mutiny of 1857 S. was captured by the mutineers, and 113 of its brave native defenders were killed.

SHAMOKIN, in Northumberland Co., Pa. It has three railroads, and is surrounded by anthracite coal regions. Pop. 9500.

SHANK'LIN SAND, a name commonly applied to the Lower Greensand of geologists. It occupies a position between the Wealden strata and the Gault, and is typically represented in the Isle of Wight and on the coast of Kent, England. Its greatest thickness is about 800 feet, made up of calcareous sandstones, sands, and clays. The latter are in many cases used as fuller's earth. The fossils are numerous and chiefly marine, though remains of reptiles, such as *Iguanodon mantelli*, are occasionally found.

SHARON, a town of Mercer Co., Pa. It has railroad connection with the principal points of Pennsylvania, and is engaged in manufacturing and coal mining. Pop. 5684.

SHARON SPRINGS, an American summer resort, in Schoharie Co., N. Y. There are four mineral springs and numerous hotels. It is annually visited by numerous guests in search of health and recreation.

SHARP, WILLIAM, a line engraver, was born in London, England, January 29, 1749. He served an apprenticeship to a bright engraver, and after much rough humble work, acquired some skill as a writing engraver. On the publication of the *Novelist's Library* he gained a high reputation by his treatment of Stothard's graceful drawings, but his full power was only shown later in his execution of large plates, such as Guido's 'Doctors of the Church Disputing,' West's 'King Lear in the Storm,' Carlo Dolci's 'Virgin and Child,' and Copley's 'Siege of Gibraltar' and 'The Parting of Charles I. from his Family.' He was elected an honorary member of the Imperial Academy of Vienna, and of the Royal Academy of Munich in 1814, and died at Chiswick, July 25, 1824. S. was one of the ablest of English engravers, his style being at once manly and nervous.

SHEA, JOHN D. GILMARY, LL.D., born in New York, N.Y. He became a lawyer, but has devoted his life to literary pursuits. He has published numerous historical works, among which the following are the best known: *The Discovery and Exploration of the Mississippi Valley; History of the Catholic Missions among the Indian Tribes; The Catholic Authors of America;* and *Early Voyages up and down the Mississippi.*

SHEDD, WILLIAM G. THAYER, D.D., LL.D, an American theologian, born at Acton, Mass., June 21, 1820, and graduated from the University of Vermont in 1839. He graduated from Andover Seminary in 1843, and besides filling pastorates at Brandon, Vt., and in New York City, has occupied the following positions: professor of English Literature in the University of Vermont (1845–52), professor of Sacred Rhetoric in Auburn Theological Seminary (1852–53), professor of Ecclesiastical History in Andover (1853–62), professor of Biblical Literature in Union Theological Seminary, New York (1863–74); and in 1874 he became professor of Systematic Theology in the same institution, which position he still holds (1884). He has published *Lectures upon the Philosophy of History, Discourses and Essays, History of Christian Doctrine, Homiletics and Pastoral Theology*, and *Sermons to the Natural Man.*

SHEIL, RICHARD LALOR, born at Drumdowney, Waterford, Ireland, 17th August 1791, and educated at Stoneyhurst (1804–07), graduated at Trinity College, Dublin (1811), and was called to the Irish bar (1814). During the years 1816–22 he wrote six dramas, in 1822 contributed to the *New Monthly* his brilliant *Sketches of the Irish Bar* (2 vols. 1855), and becoming in the same year a member of the Catholic Association, devoted himself with O'Connell to the cause of Catholic Emancipation. In 1829 he received his silk gown, in 1830 entered Parliament, and having there proved himself one of the greatest orators of the day, became a commissioner of Greenwich Hospital (1838), Vice-President of the Board of Trade (1839), Judge-Advocate-General (1841), Master of the Mint (1846), and British Minister at Florence (1850), where he died 23d May 1851. See his *Memoirs* by W. T. M'Cullagh (2 vols. 1855).

SHELL, in artillery, a hollow projectile containing a bursting charge of gunpowder, which is exploded either by a 'time' or a 'percussion' fuze. It is the offspring of the *ollæ* or 'firepots' of the ancients, which held the celebrated Greek fire. The use of explosive projectiles has been known to the Chinese from a very remote period. Small shells (grenades) were thrown by hand, slings, or other means, before they were used with mortars. The earliest recorded employment of mortar and S. is at Jadra in 1376 by the Venetians. Horizontal fire of shells from howitzers, and afterwards from guns, was first attempted in the 18th c.

SHENANDOAH, in Schuylkill Co., Pa., on the Lehigh Valley and Philadelphia & Reading railroads, 13 miles from Pottsville. It is surrounded by coal fields, and over one-half of the total yield of the Schuylkill coal region is produced within three miles of the town. Pop. 13,000.

SHEN-SE, a province in the N. of China, W. of Shan-se. Area, 81,216 sq. miles; pop. (1852) 14,098,499. It is hilly but fertile, and very rich in coal and other minerals. It suffered greatly during the famine of 1875–78.

SHERE ALI, Amir of Afghanistan, was born about 1823. On the death of his father, Dost Mahommed, in 1863, he succeeded to the throne, though only the third surviving son, in accordance with the rule of paternal nomination. His early reign was one continual quarrel with those of his own blood. Though at first he maintained his authority, he was driven out of his capital, Cabul, in 1866, and gradually forced back to Candahar and Herat, which latter stronghold was always held for him by his eldest son, Yakub Khan. But the Indian Government of Lord Lawrence refused to recognize his rival brother; and by the spring of 1868 he had again established himself throughout Afghanistan.

In March 1869 took place the celebrated Umballa Durbar, at which Lord Mayo, with exceptional magnificence, entertained S. A., 500 miles within the British frontier. The Amir received £120,000 in cash, 10,000 stand of muskets, and a battery of light guns; and cordial expressions of mutual friendship were interchanged. He has since attempted, without much success, to introduce European reforms into Afghanistan, and his supremacy has been outwardly undisturbed. But his avowed preference for a younger son, Abdulah Jan, who died in August 1878, caused Yakub Khan to threaten rebellion. He was first appeased with the government of Herat; but in 1875, with genuine Afghan treachery, he was enticed to Cabul, and thrown into prison. The name of S. A. has recently attracted great interest in England. The armed occupation of Quettah and other measures aroused his suspicions nature. In 1877 his envoy at Peshawur rejected the proposals brought by Sir L. Pelly, which are supposed to have involved the reception of a British Resident at Cabul. In August 1878 a Russian mission under General Abramof, with a strong es-

cort, was honorably entertained at Cabul; and in the following month a similar British mission under Sir Neville Chamberlain was contumeliously turned back at the mouth of the Khyber Pass. The result was a war between Britain and Afghanistan, in which the latter was rapidly and completely beaten. S. A. was forced to flee from Cabul, and took refuge near the Russian frontier, where he died at Mazan-i-Sherif, 21st February 1879.

SHER'IDAN, PHILIP HENRY, a distinguished American general, was born at Somerset, Ohio, 6th March 1831. He was educated at West Point, and from 1853 to 1861 he served in Texas and on the Pacific coast. On the outbreak of the civil war, S. was a captain in the 13th Infantry. At first he held subordinate commands in the west, but in the autumn of 1862 he was transferred to the Army of Ohio, and commanded a division at the battle of Perryville, and again at the battle of Murfreesboro, where he distinguished himself so greatly as to be gazetted major-general of volunteers. In 1863 he served with distinction under Grant at the battle of Chattanooga, and on Grant's transference to the E. he took S. with him, appointing him chief of cavalry of the Army of the Potomac. In the protracted struggle between Grant and Lee in 1864 and 1865 S. rendered the most brilliant services to his chief in several daring cavalry raids into the enemy's country, but especially in the battles of the Wilderness, of Opequan Creek and Cedar Creek, and the final struggles around Five Forks and Appomattox which resulted in the surrender of Lee. In the autumn of 1864 the thanks of Congress were bestowed upon S. and his troops, and he was created major-general in the regular army. Since the war he has held various military commands, and has been raised to the rank of lieutenant-general. He visited Europe, and was a spectator of part of the struggle between the Germans and French. In 1875 he was instrumental in quelling the disturbances in Louisiana.

SHERMAN, JOHN, a brother of Gen. W. T., born at Lancaster, O., May 10, 1823, and became a lawyer. He was four times elected to Congress; and, in 1860, was made U. S. Senator, and was twice re-elected to this office. He was Secretary of the Treasury under R. B. Hayes, and in 1880 was again elected U. S. Senator from Ohio, which position he now holds (1885).

SHERMAN, in Grayson Co., Tex., 270 miles N. by E. of Austin. It is surrounded by a wheat, fruit, and cotton region. Pop. 6143.

SHERMAN, ROGER, an American patriot, born at Newton, Mass., April 19, 1721. He was first a shoemaker, then a merchant, and in 1754 was admitted to practice law. He was one of the committee which framed the Declaration of Independence (1776), and one of the framers of the 'Articles of Confederation' (1777). He rendered efficient service to the revolutionary cause, and was chosen U. S. Senator from Connecticut, in 1791. Died at New Haven, Conn., July 23, 1793.

SHILLABER, BENJAMIN P., born at Portsmouth, N. H., in 1814, became a printer, and for many years connected editorially with the Boston *Post*. He has published *Life and Sayings of Mrs. Partington. Rhymes with Reason and Without*, &c.

SHILLONG' (*Silang*), the Administrative capital since 1874 of the province of Assam, British India, and the headquarters of the district of the Cossya and Jynteah Hills. It lies among the mountains that form the watershed between the Brahmaputra and Surma river systems, 4900 feet above the sea. It is connected on the N. with Gowhatty, the former capital of the province, by a good cart-road. S. is healthy and conveniently situated, and has much increased since it became the residence of the chief commissioner and his staff. There is a church, and permanent official buildings are being erected. Pop. (1872) 1393.

SHI'LOH, BATTLE OF, fought on the Tennessee River, Tennessee, on the 6th and 7th of April 1862, between the Union army under Generals Grant and Sherman, and the Confederates under Generals Johnston and Beauregard. On the first day of the battle the advantage lay with the Confederates; on the second, the Union army, having received reinforcements, defeated their opponents, and forced them to retreat to Corinth.

SHIMO'GA, the chief town of the district of the same name, in the state of Mysore, India, on the left bank of the Tunga river, a tributary of the Kistna, 171 miles N.W. of Bangalore; pop. (1871) 11,034. Paper and chintz are manufactured.—The *district* of S., which lies in the extreme N.W. of Mysore, has an area of 3797 sq. miles; pop. (1871) 498,976. The crops are rice, *ragee*, sugar-cane, areca nuts, and coffee. At the village of Sorab the best sandal-wood carving in India is executed. By the falls of Gersoppa, which are among the finest in the world, the Sharavati river, 250 yards wide, throws itself down the E. Ghauts with a leap of 960 feet. At Sulekere is an artificial lake 40 miles in circumference, which is now being utilized for irrigation.

SHING-KING, a province of Manteimria, bounded S. by the Gulf of Leao Tong and Corea Bay, W by the Palisade, or Barrier of Stakes, a continuation of the Great Wall, E. by Corea, and N. by Kir-in-ula. Area, 40,000 sq. miles; pop. about 2,166,000, of whom 942,003 are Chinese. The capital is Mukden. The surface is mountainous, but the valleys are fruitful, and the soil is known to contain much coal, iron, gold, &c. Agricultural produce is exported.

SHINGLES (Lat. *cingulum*, 'a girdle') is the popular name for the variety of herpes known as *Herpes Zoster*. It is characterized by the arrangement of the inflamed patches, with their clustered vesicles, in the form of a half zone, following the distribution of one of the intercostal nerves, and extending from the back to the sternum. S. is generally preceded by slight fever and severe pain in the parts; the eruption runs its course in about a fortnight.

SHIP'KA, a village of Turkey, on the S. declivity of the Balkan range, 1798 feet above the sea, and 5 miles W.N.W. of Kasanlik, has 800 Bulgarian houses and two churches. The chief occupation is rose-growing, for the manufacture of rose-oil. S. gives its name to the S. PASS, 2938 feet (according to Barth) above it, reached by a steep path nearly impassable for carriages. From the pass a more gradual road (4½ hours' ride) leads 9 miles N. to Gabrovo (1300 houses), 839 feet lower. It was the scene of desperate and bloody struggles in August and September 1877, between Suleiman Pasha and a Russian force which had seized it after crossing the Balkans (14th July) by the Hainkoi Pass, and suffering defeat at his hands at Eski Sagra. In a vain endeavor to force the pass, the Turkish general threw away the lives of more than 20,000 veterans.

SHIP'S HUS'BAND, the owners' agent in the management of a ship, often himself one of the owners. His duties are to keep the vessel in repair and ensure her seaworthiness, to see her properly manned, to attend to her freightage and especially to her provisioning, to look after her papers, and in general to see her properly and efficiently equipped.

SHIR'LEY, JAMES, an English dramatist, born in London, England, September 13th, 1596, was educated at the Merchant Taylors' School, and at St. John's College, Oxford. He graduated at St. Catharine's Hall, Cambridge, took a cure near St. Albans, and subsequently turning Romanist, resigned his living to teach in St. Albans Roman School. Then he became a playwright in London, and had written in all 33 pieces before 1642, when Parliament suppressed theaters. During the civil wars S. aided the Earl of Newcastle with pen and sword. Returning to London, he gained subsistence once more by teaching, but he and his wife were driven from their Fleet Street home by the Great Fire, and both perished from fatigue on the same day, October 29, 1666. S.'s style is rich and strong.

SHIRT (Old Eng. *sceort*), a familiar article of male attire, was first worn in England during the pre-Norman period, linen being the material of which it was made. Woollen shirts were introduced later, and in the 10th c. the wearing of one was reckoned a severe form of penance. Silken shirts were in use in Chaucer's time, while during the 15th and 16th centuries shirts of fine lawn, richly embroidered on the collar, front, and wrists, were the fashion, and for their display the doublets were worn low-necked and 'slashed' in the arms. In Charles II.'s reign much of the S. was shown, and then it was common to ornament it with cut-work representing historical and religious subjects.

SHIS'DRA, a town of Russia, government of Kaluga, on the S., a feeder of the Ugra, 37 miles E.N.E. of Briansk. It manufactures oil, woollens, glass, leather. Pop. (1870) 11,703.

SHOLAPORE', the chief town of the district of the same name in the Bombay Presidency, British India, 283 miles S.E. of Bombay by rail. Pop. (1872) 53,403. It has grown with the growth of the cotton trade. The houses cluster round a fort which was captured by the British in 1818, when this tract of country was acquired from the Peishwa. The *district* of S., which was formed out of Poonah in 1838, lies between the Nizam's Dominions and Sattara. Area, 3925 sq. miles; pop. (1872) 662,986. It is a hilly country, forming part of the Deccan or central plateau of India. The food crops are millets, pulses, and a little wheat; but cotton is the staple of commerce. Weaving is largely carried on in the towns. This tract suffered more than any other part of the Bombay Presidency from the famine of 1877. The cattle especially died in large numbers, and only one-fifth of the revenue could be collected within the year.

SHOV'EL, SIR CLOUDESLEY, an English admiral, born about 1650, of poor parents, near Clay in Norfolk. He entered the navy as a cabin-boy, but had attained the rank of lieutenant in 1674, when, during an expedition to Tripoli to seek satisfaction for outrages on the English in those parts, he was sent by his commander, Admiral Sir John Narborough, with a requisition to the Dey. Twice S. was received with scorn, and the second time sent back without an answer; but from observations he had made he was able the same night to seize the enemy's guardship and burn four other vessels without losing a man. For this feat he was pro-

moted to the command of a ship. Knighted by William III. for gallantry at Bantry Bay, S. in 1692 became Rear-Admiral of the Red. He took part as such in the battle of La Hogue (1694), was Vice-Admiral of the Red in the expedition against Camaret under Lord Berkeley, and in that against Dunkirk held the chief command. He led the van in the battle of Malaga (1704), and took a prominent part in the capture of Barcelona. In 1706 he sailed to Portugal, under Lord Rivers, to aid the king of that country, and the year after joined the Duke of Savoy in the siege of Toulon, but on his voyage home with nine ships of the line he was wrecked off the Scilly Isles, October 22, 1707. A miserable monument marks his tomb in Westminster Abbey.

SHREVEPORT, a city of Caddo Parish, La., on the Red River, at the head of steamboat navigation, in the center of a cotton-growing district. It is the terminus of three railroads, and carries on an extensive trade and river commerce. Pop. 8009.

SHURTLEFF COLLEGE, an American educational institution, under control of the Baptists, at Upper Alton, Ill. In 1835 it was chartered under the name of Alton College, and in 1836 its name was changed to that which it now bears. Co-education of the sexes is practiced.

SIBSAUGOR (*Sibsagar*, 'lake of the god Siva'), the chief town of the district of the same name, in Assam, British India, about 11 miles S. of the left bank of the Brahmaputra, 46 miles S.E. of Luckimpur. Pop. (1872) 5278. In the neighborhood are many tanks and temples of the old native kings.—The *district* of S., which lies between the river and the Naga Hills, has an area of 2413 sq. miles; pop. (1872) 296,589. The tea-plant grows here indigenously, but the tea-manufacture did not flourish till 1852. In 1874 there were 22,573 acres under cultivation, yielding nearly five million lbs. of tea, or more than half the entire yield of the Assam valley; there were 92 Europeans and 24,000 natives employed, of whom the majority are imported from Chota Nagpur. An acre of adult plant ought to produce an average of 400 lbs., worth £40 in the English market.

SICILI, a town of Sicily, province of Syracuse, on a rocky hill overlooking a small stream, 3 miles from the coast and 8 S. of Ragusa. It occupies the site of the ancient Syracusan colony of *Casmenæ* (founded in 644), and has considerable trade, and a pop. (1875) of 10,887.

SICK'INGEN, Franz von, a famous German knight, was born 2d March 1481, at the Eberburg, near Münster-am-Stein. His father, of an old knightly family of the Palatinate, had made himself a power on the Rhine, and from his mother he inherited Landstuhl and Hohenburg. After years spent in the maintenance of private feuds, S. was in March 1515 outlawed by Maximilian for warring against the city of Worms, but in spite of this he appeared before the town with 6000 foot and 1100 horsemen, among them Götz von Berlichingen. While the struggle lasted, he fought first against, then for, the Duke of Lothringen, aided François, king of France, and Ulrich, Duke of Würtemberg (1516), and in 1518 was reconciled to Kaiser Max, who freed S. from the ban to gain his service. After the Emperor's death, François and Karl both solicited his help to obtain the imperial dignity. He attached himself to Karl, who lent him 20,000 gulden 'without pledge or surety.' Ulrich von Hutten, who lived with S. at Ebernburg, gained him over to the reforming principles, and persuaded him to support Reuchlin against the Dominicans of Köln, and take Butzer, Œcolampadius, and Schwebel into his service. In 1521 and 1522 S. fought for Karl V. in the Ardennes at the head of an army of mercenaries. Systematically secularizing the church lands on the Rhine, 'to make way for the new learning,' he was gradually nearing his great aim, a principality for himself, when in the autumn of 1522, during his feud with Trier, Philipp of Hessen and Ludwig of the Palatinate advanced against him, and on the 10th of October he was outlawed by King Ferdinand. Shut up and besieged in Landstuhl, he was on the 1st May 1523 mortally wounded, and died on the day after the capitulation, 7th May 1523. His children regaining the castle twenty years after, erected a stone monument over his grave in the chapel there, which has been restored by the present owners. Maximilian raised the S. family to the rank of 'Reichsfreiherren,' Joseph III. to 'Reichsgrafen.'

SIDDHARTHA, 'he who has accomplished his aim,' the name said to have been given at birth to Gautama Buddha. This was his individual name, Gautama that of his family, and Buddha ('enlightened') a subsequent appellation.

SID'MOUTH, Henry Addington, Viscount, the son of a London physician, was born at Reading, England, May 30, 1757, and passed from Winchester School to Brasenose College, Oxford (1774). He graduated B.A. (1778), and entering Lincoln's Inn was called to the bar (1784), a week later being returned to Parliament for Devizes. A firm supporter of Pitt, he filled the office of Speaker from 1789 to 1801, when differences having arisen on the question of Catholic Emancipation, Addington, as one of the 'King's Friends,' was called on to form a ministry, the chief event of which was the short-lived Peace of Amiens (1802). Pitt's return to power on condition of his abandonment of Emancipation (1804) was accepted by Addington, who for six months held the presidency of the council (1805), being at the same time raised to the peerage as Viscount S. As Secretary of State for the Home Department (1812–22) he incurred considerable obloquy by his conduct at the Manchester Reform meeting (1819); and having in 1824 withdrawn from official life, died at his residence in Richmond Park, February 15, 1844. See his *Life* by Dean Pellew (3 vols. 1847).

SIDNEY, a town of Shelby Co., O., on the Great Miami River and the Miami & Erie Canal. It has two railroads; is engaged in manufacturing; and is the center of a rich agricultural district. Pop. 4600.

SIE'BOLD, the name of a gifted family of physicians, anatomists, and physiologists in Germany, of whom the most distinguished was Philippe Franz Balthasar von S., born February 17, 1796, at Würzburg, where he studied medicine and the natural sciences. Entering the service of Holland, he accompanied the troops to Batavia in Java as medical officer in 1822. In 1823 he was commissioned by the government to visit Japan in the interest of science. S. spent six years in studying the flora and fauna of the Japanese islands, returning to Europe in 1830 to complete the publication of his results. In 1859 he again visited Japan, and returned to Europe in 1862. He died at Munich, October 18, 1866.

SIED'LEC, the chief town of a Russian government of the same name, kingdom of Poland, 40 miles E. by S. of Warsaw. The seat of a Roman Catholic bishop, it has a fine palace, girt with beautiful gardens, and carries on important baking, distilling, and sugar-refining industries. Pop. (1872) 10,013. The *government*, lying between the Vistula and the Bug, nearly corresponds to the old palatinate of Polachia. Area, 5534 sq. miles; pop. (1872) 548,970. In 1872 it yielded 1,430,369 chetwerts of potatoes, and the produce of its 359 factories (607 distilleries, 400 sugar-refineries, 339 glass-works), employing 1951 men, was 1,921,160 rubles.

SIE'MENS, Ernst Werner, a celebrated German electrician, was born at Lenthe, near Hanover, December 13, 1816. In 1838 he became an officer in the Prussian artillery; but devoted most of his time to scientific studies. In 1841 he patented a method for electroplating and gilding; and in 1848, in Schleswig-Holstein, he laid the first submarine mines which were fired by electricity. The next year he retired from the army, and, along with Halske, founded a telegraphic establishment at Berlin, which has constructed the telegraph lines of Russia, Spain, Brazil, N. Germany, &c. By his numerous improvements and inventions he has rendered great services to telegraphy; and has, besides, made valuable researches in electrical science generally.—His brother, Karl Wilhelm S., was born at Lenthe, April 4, 1822, and studied at Göttingen. In 1843 he settled in London as a civil engineer, and in 1853 founded a branch of the Berlin house, at the same time erecting a large establishment at Woolwich for the construction of telegraphic apparatus. He became a member of the Royal Society in 1862, was president of the Institution of Mechanical Engineers, and was first president of the Society of Telegraph Engineers. He also presided at the Iron and Steel Congress which met for the first time at Paris in the summer of 1877. He is the inventor of a regenerating gas furnace, a bathometer, a pyrometer, &c. His pyrometer measures high temperatures by the change of electrical resistance in a given bar of metal due to heat. His publications relate chiefly to these inventions, and are valuable contributions to the literature of science.—Friedrich S., a third brother, was born December 8, 1826, at Menzendorf. He began life as a seaman, but in 1846 followed his brother Karl to London, and greatly aided him in perfecting his gas furnace.

SIGEL, Franz, an American general, born at Zinsheim, Bavaria, Nov. 18, 1824, and entered the army of Baden, after having received a military education. Compelled by political reasons to leave Europe, he came to the U. S., in 1848, and for several years taught in New York. In 1861 he entered the Union service, and rendered gallant service during the civil war, rising to the rank of major-general. At the close of the war he took up his residence in New York.

SIGNORELL'I, Luca, the forerunner of Michael Angelo, was born at Cortona 1441, and in his thirteenth year apprenticed to Piero della Francesca. From him he acquired that mastery of anatomy seen in his first 'Madonna' and 'School of Pan,' both which he painted for Lorenzo de' Medici soon after coming to Florence (1475). At Florence and Loreto, in the Sixtine Chapel at Rome and half the Umbrian and Tuscan churches, he painted in the next twenty years frescoes and altarpieces, the finest perhaps a 'Circumcision,' now in the Hamilton Collection. All were eclipsed by the eight spirited 'Scenes from the Life of St. Bene-

dict' in the monastery of Monte Oliveto (1497), as these again by the 'Doom' at Orvieto (1499–1503), where, in his kinsman Vasari's words, 'angels, devils, ruins, nudes, and foreshortenings are done with a wondrous and inventive fancy.' This, the most daring and learned outcome of the Renaissance, the painter's triumph and monument, brought him a second summons to the Vatican; but in 1510 he withdrew to his native city, where, working to the last, he died in 1525. See two articles by Prof. Colvin in the *Cornhill* (1875), and Fischer's *L. S. und die Italienische Renaissance* (1878).

SILHET or SYLHET, the chief town of the district of the same name, now annexed to the province of Assam, British India, at the foot of the Khasi Hills, on the river Surmah, a tributary of the Brahmaputra. It is a Mohammedan town, built on raised ground among the marshes. Pop. (1872) 16,846.

SIL'ICATE PAINTS. The manufacture of S. P. is extensively carried on by the Silicate Paint Company at Liverpool and London. The new industry originated a few years since on the discovery of a large deposit of almost pure silica near Llandudno, in N. Wales. This natural silica, when dried, forms an almost impalpable powder, which mixes readily with colors and oil. The S.P., which may be had of all colors, are non-poisonous, unlike the ordinary lead paints. The new silicate white has a base of sulphide of zinc, is whiter, more durable, and has a greater body and covering power than white lead; the color is not affected by gases, and heat of 500° is successfully resisted.

SIL'IUS ITAL'ICUS, a Roman poet, born about 25 A.D., rose through high distinction as a pleader at the bar to the consulship in 68, the year of Nero's death. Vitellius made him proconsul of Asia, and, after discharging this office with honor, S. retired from public life, and died at the age of seventy-five. His chief work was the *Punica*, a heroic poem in 17 books, narrating the events of the Second Punic War. The materials are drawn from Livy and Polybius, and worked up 'maiori cura quam industria' (Pliny) into the coldest and dreariest composition ever misnamed a heroic poem. This, the only extant work of S., was discovered by Poggio at St. Gall during the Council of Constance, and was first printed at Rome in 1471. The best editions are those of Cellarius (Leip. 1695), Drakenborch (Utrecht, 1717), Ernesti (Leip. 1791–92), Ruperti (Gött. 1795–98), and Lemaire (1823).

SILL, JOSHUA W., an American general, born at Chillicothe, O., Dec. 6, 1831, and graduated from West Point in 1853. For gallant services in the civil war he was promoted brigadier-general of volunteers in 1862. At the battle of Perryville (Oct. 8, 1862) he commanded a division; and at the battle of Murfreesboro' (Dec. 31, 1862), was killed while leading a charge against the enemy.

SILVA'NUS (from *silva*, 'a wood'), an Italian divinity, guardian of trees, fields, and husbandmen. He marked out the boundaries of fields, he fostered the growth of trees, and he shielded flocks from destruction. The peasants had a festival in his honor, and offered him corn, milk, wine, and other rustic products. Through similarity of function, S. came to be identified with Pan and Faunus. His appearance was that of a hale and cheerful old man.

SIM'EON, the second of Jacob's sons by Leah, took part in the massacre of the Shechemites, and was selected by Joseph as the hostage for Benjamin. The *tribe* of S. received the S.W. corner of Canaan as its share of the conquered land, and it was still partially in possession of that territory at the time when the chronicler wrote (1 Chron. iv. 41–43).

SIMILE (Lat. a 'likeness') is a figure of speech which consists in the formal expression of the resemblance perceived or supposed to exist between two different things. Ex., 'As the stars, so shall thy seed be,' 'When ye pray, use not vain repetitions as the heathen do.'

> 'Pleasures are like poppies spread,
> You seize the flower, its bloom is shed.'

SIMON, JULES, properly JULES FRANÇOIS SIMON SUISSE, a French philosopher and politician, was born at Lorient, department of Morbihan, on December 31st, 1814. Educated at the École Normale, Paris, he succeeded his master, Cousin, in the professorship of philosophy at the Sorbonne in 1839. In 1852 he lost this post on account of his refusal to take the oath of allegiance to Napoleon III., and afterwards held several courses of lectures in different towns in Belgium, on philosophy and education. He was elected to the French Academy in 1863, and in the same year was returned to the Chamber of Deputies, where he took his place among the members of the moderate Left. After vigorously opposing the plebiscite of 1870 and the declaration of war with Prussia, he became a member of the Provisional Government on the 4th September 1870, and afterwards occupied the position of Minister of Education in the Thiers Government from 1871 to 1873. In 1875 he was elected to the Senate, where he became the leader of the Republicans; and from December 13th, 1876, til May 16th, 1877, he was Minister of the Interior under President Macmahon, whose strongest opponent he had formerly been. He afterwards became the editor of the *Echo Universel*, a moderate Republican organ.

SIMS, JAMES MARION, M.D., a distinguished American surgeon, born in Lancaster Co., S. C., Jan. 25, 1813, and graduated from South Carolina College in 1832. He graduated from Jefferson Medical College, Philadelphia, Pa., in 1835, and at once began the practice of medicine at Lancaster, S. C. In the same year he removed to Mount Meigs, Ala., and in 1838 to Macon Co. In 1840 he removed to Montgomery, and rapidly attained distinction by his many brilliant and successful surgical operations. Here he first succeeded in curing vesico-vaginal fistula. In the fall of 1853, he removed to New York, where after much opposition on the part of the leading physicians, he succeeded in establishing the Womans' Hospital. Besides his work here, Dr. Sims soon built up an extensive private practice. In 1861 he visited Europe, and while there operated in Dublin, London, and Paris. After this he practiced in New York, frequently visiting Europe and operating while there. Died in New York, Nov. 14, 1883.—H. MARION, M.D., son of the preceding, an eminent physician of New York, who has pursued the same specialties to which his father devoted his life, and has met with an equal degree of success.

SING-SING, in Westchester Co., N. Y., on the Hudson River and the Hudson River Railroad, 30 miles from New York. It has several military academies, female seminaries, and other institutions of learning. It has also pill and porous plaster works, file factories, lime-kilns, and limestone quarries. Sing-Sing State Prison is located here. Pop. 6578.

SIOUX CITY, a city of Woodbury Co., Ia., on the Mississippi River, about 100 miles above Omaha. It has 8 railroads; is the center of an agricultural region, and a supply point for a very extensive and growing country; and has large railroad shops, elevators, and commission houses. Pop. 13,000.

SIOUX FALLS, a town of Minnehaha Co., Dakato, on the Sioux River, and 90 miles N. of Sioux City, Ia. It has several railroads, and is a rapidly growing business center, having water power, which is, as yet, only partially developed. Pop. 4500.

SIPUN'CLE, the name given to the membranous tube perforating the septa or divisions of the shell in such *Tetrabranchiate* cephalopods as the Pearly Nautilus, &c.

SIRE'NIA, an order of *Mammalia* including but two existing genera—the Manatees and Dugongs. Another Sirenian, the *Rhytina*, was discovered by Behring, but became extinct in 1768.

SISTERS OF CHARITY, in America. A religious order, of the Roman Catholic Church, introduced into this country by Elizabeth Bayley Seton, of N. Y., who, with her two sisters-in-law, Harriet and Cecilia Seton, assumed the religious habit, and opened a convent in Emmettsburg, Md., in 1808. In 1812 the sisterhood numbered 20 members, and Mother Seton was chosen Superior-General. At the death of the Superior, in 1821, the order numbered 50 members, had branch houses in several leading cities, and was in an exceedingly flourishing condition. The body increased with such wonderful rapidity that, in 1852, it became necessary to divide the work of the order, and in consequence the Mother-House at St. Joseph's, near Cincinnati, became independent of Emmettsburg, and was made the headquarters of the work carried on in that section of the U. S. They retain the same rules and costume of Mother Seton's foundation at Emmettsburg. This new branch has also been blessed with great prosperity, and numbers now about three hundred and eighty members, and has thirty-five branch houses; some in Ohio, Michigan, Colorado, and New Mexico. See ORDERS, RELIGIOUS, in AM. SUPP.

SIR'LOIN (Fr. *sur*, 'over,' and loin), a loin of beef. Tradition reports that the name originated through Charles II., after dining off a loin of beef, playfully knighting it—

> 'He held his sword pleased o'er the meat,
> "Rise up, thou famed *Sir-loin*."'

SIVAJI', the founder of the Mahratta power in India, and the boldest warrior the Hindus have ever produced, though, like Hyder Ali and Runjeet Singh, he could neither read nor write. He was born of Rajput descent at the hill fort of Sewneri in 1627, and was brought up at Poonah, which belonged to his father, who had also feudal estates in the Carnatic. At the age of nineteen he began his career by seizing the neighboring strongholds, and by attacks upon the Mohammedan kingdoms of Bijapur and Delhi. In 1659 he treacherously assassinated with his own hand the Bijapur general, and established his power over the whole Mahratta country. He twice sacked Surat, and fitted out a fleet to intercept the pilgrims to Mecca. In 1664 he assumed the title of Rajah and established a mint, but shortly afterwards joined the imperial army, and even appeared at the court of Aurungzib at Delhi. In 1674 he was solemnly enthroned at Raighur, which he had lately stormed. On this occasion he was weighed against gold, and the sum (about 10 stone or 16,000

pagodas in value) was distributed among Brahmins. At this time the British at Bombay made a treaty with him. The whole of the Deccan was now tributary, and he led a marauding expedition as far as S. Tanjore. S. died at Raighur in 1680. None of his children showed any ability, but his descendants ruled in the diminished State of Sattara, latterly under English protection, until 1848.

SKEAT, Rev. Walter William, born in London, England, 21st November 1835, proceeded in 1854 from King's College School, London, to Christ's College, Cambridge, graduated B.A. as fourteenth wrangler in 1858, and obtained a college fellowship in 1860. S. now took orders, and after three years of parochial duty, became mathematical lecturer at Christ's College (1864–67), and English lecturer (1867–76). Appointed Director of the 'English Dialect Society' on its establishment in 1873, he has been one of its most laborious and successful editors. In 1878 he was unanimously elected to the newly-founded Elrington and Bosworth Professorship of 'Anglo-Saxon' in the University of Cambridge. S. is perhaps the most admirable editor of Early English literature that has ever lived. Familiar with all its contents, and more profoundly skilled than any of his contemporaries in the difficult lore of MSS., he also brings to the elucidation of his texts a keenly penetrative yet sympathetic criticism that overlooks nothing and weighs everything. Some of his editorial labor, *e.g.*, *Piers the Plowman* and his Essay on the 'Rowley Poems' of Chatterton, is as masterly as anything ever achieved in regard to a Greek or Roman classic.

SKENE, James, a scion of an ancient Scottish family, was born at Rubislaw, 5th March 1775, spent several years of his youth in Saxony, where he acquired a perfect knowledge of German. On his return to his native country, he formed a close friendship with Sir Walter Scott, who dedicated to him the fourth canto of *Marmion*. In 1806 he married Jane, daughter of Sir William Forbes of Pitsligo, by whom he had three sons and four daughters. He died 27th November 1861. S. was a man of fine character, cultivated tastes, and lively talents. Scott owed him not a little in various ways. Some of the Jewish scenes in *Ivanhoe* were suggested by S., who also furnished the great novelist with part of his materials for *Quentin Durward*. His archæological tastes he transmitted to his second son, William Forbes S., born at Inverie, Kincardineshire, 7th June, 1809, educated at the High School of Edinburgh, studied in Germany and at the Universities of St. Andrews and Edinburgh. In 1831 he became a Writer to the Signet.

SKOB'ELEFF, General, a brilliant and daring Russian officer, born about 1840, and is said to be the great-grandson of a 'Scobie' from the W. of Scotland, who emigrated to Russia, and rose to distinction in the Russian navy. S. first served in Central Asia under Kaufmann, where his extraordinary audacity and splendid courage soon won him a great name. His exploits have almost become legendary among the soldiers of the Czar. Intrusted by Kaufmann with the command of the forces sent against Khokand, he conquered and annexed a territory containing two millions of inhabitants. At the outbreak of hostilities between Russia and Turkey in 1877, S. happened to be in disgrace at court, and came to the seat of war unattached. At the crossing of the Danube at Sistova he fought in the ranks as a private soldier, took part in the great surprise-march of Gourko through Bulgaria, obtained command of a regiment of Cossacks after the Russian disasters at Plevna, and gave material help at the recapture of Lofteha, 3d September. Appointed commander of the left wing of the Russian army at Plevna, S. stormed with frightful loss the Sofia and Krishine redoubts (September 11), but was forced to abandon them next day, was present at the surrender of Osman Pasha, whom he was the first to greet, afterwards captured the entire Turkish force at Shipka, and marched with the victorious Russians from Sofia to San Stefano. He was a thoroughly scientific and accomplished officer, and had even more than a Russian's skill in languages, speaking and writing with ease, in addition to his native tongue, French, German, English, Italian, Roumanian, Bulgarian, Polish, Turkish, and modern Greek. He died at Moscow, 7th July 1882.

SLEA'FORD, a market-town of Lincolnshire, England, on the Slea, 14 miles E.N.E. of Grantham by rail; has a cruciform parish church (1271–1403), with a spire 144 feet high; alms-houses (enlarged 1858) and a grammar-school founded by Robert Carre in 1604; and a Second Pointed cross, 70 feet high, erected (1850) as a testimonial to Mr. Handley, M.P. for S. Lincolnshire. S. publishes one weekly newspaper, and has a considerable trade in agricultural produce. Pop. (1881) 3680.

SLOCUM, Henry Warner, an American officer, born at Pompey, Onondaga Co., N. Y., Sept. 24, 1827, and graduated from West Point in 1852. In 1856 he resigned from the army and began to practice law in Syracuse, N. Y. In 1861 he entered the Union service, and at first Bull Run was severely wounded. He was made brigadier-general of volunteers, and was present at Gaines' Mill, Glendale, and Malvern Hill. In July, 1862, he was made major-general of volunteers, and participated in second Bull Run, South Mountain, Antietam, Chancellorsville, and Gettysburg. He afterwards served under Sherman on his 'march to the sea,' and in 1865 resigned from the army, and began the practice of law in Brooklyn, N. Y. He has since been twice elected to Congress.

SLOVACK'I, Julius, a Polish poet, son of a professor in the University of Wilna, was born there, August 23, 1809, and after completing his studies threw himself, as a soldier and a poet, into the popular war of 1830. On its failure he went abroad; and, after traveling through the East and various parts of Europe, settled at Paris. He died at Rome, April 3, 1849. Most of S.'s poems depict the darker sides of human life and character. There was something demoniac in his genius, which drove him, like Mickiewicz, after a long struggle, into the mystic, religio-political sect of Towianski.

SMECTYM'NUUS, an answer to Bishop Hall's *Divine Right of Episcopacy*, was published at London in 1641, and was so entitled because the joint work of five Presbyterian divines—Stephen Marshall, Edmund Calamy, Thomas Young, Matthew Newcomen, and William Spurstow.

SMILES, Samuel, the historian of industrial enterprise, was born at Haddington, Scotland, in 1816, educated for the medical profession, and practised for some time at Leeds, where he published *Physical Education* (1837) and a work on *Railway Property, its Conditions and Prospects* (1849). After holding the editorship of the *Leeds Mercury* he became secretary to the Leeds and Thirsk Railway in 1845, and transferred his services about 1852 to the South-Eastern Railway, from which he retired in 1866. S. received the degree of LL.D. from Edinburgh University in 1878.

SMITH, George, an English Assyriologist, was born at Chelsea, March 26, 1840, and taking an early interest in Assyrian researches, commenced in 1857 the study of Accadian. He was appointed Keeper of Antiquities at the British Museum (1865), on the recommendation of Sir Henry Rawlinson, whom he helped in the third volume of his *Cuneiform Inscriptions of Western Asia* 1867), and himself published in 1871 a masterly handbook on the *Phonetic Value of the Cuneiform Syllabary* and a *History of Assurbani-pal*, in which 3000 lines of inscriptions in the British Museum relating to Sardanapalus are transcribed, transliterated, and translated. His discovery (1872) of a tablet containing the Chaldean account of the Deluge awakened general interest, and the proprietors of the *Daily Telegraph* advanced £1000 towards the expenses of excavations on the site of Nineveh. Accordingly in January 1873 he quitted England, reached Mosul in March, and having made important excavations at Kouyunjik and paid a flying visit to the sites of Babylon and other buried cities, returned to England in the following autumn. Next year a second expedition, undertaken this time on behalf of the British Museum, was interrupted by the expiry of his *firman*, which the Turkish authorities refused to renew. However, in these two expeditions, with barely four months' actual work, he had fixed the date (860 B.C.) of the S.E. palace at Nimrûd, discovered a fragment of a crystal throne, a *stylus*, marble lintel, &c., and secured for the nation nearly 3000 tablets, described in his *Assyrian Discoveries* (1875). In March 1876 he started once more for the East, and during a stay in Syria established the site of Carchemish, the Hittite capital, at the modern Jerablûs (Gr. *Hierapolis*). The plague-stricken and unsettled state of the country stood in the way of excavations, and he was on his homeward way when he died at Aleppo, August 19, 1876.

SMITH, Gerrit, an American philanthropist, was born in Utica, New York, 6th March 1797. He inherited large landed estates from his father, an old partner with J. J. Astor in the fur-trade. He gave away nearly the whole of his property to negroes—as much as from 40 to 60 acres of freehold to 3000 persons in the single year 1846. He was an eccentric advocate of vegetarian diet and teetotalism, and in a literal sense kept an open 'tavernous' house. His charities were estimated at $50,000 a year. He contributed largely to the expenses of the Civil War, in the interest of the Union, but joined Horace Greeley in signing the bail-bond of Jefferson Davis in 1867.

SMITH, Henry Boynton, DD., LL.D., an American theologian, born at Portland, Me., Nov. 21, 1815, and was educated at Bowdoin College. He studied theology at Bangor, Andover, and in Germany. Upon his return to America, he was pastor of a church (Congregational) in Massachusetts; professor of Hebrew at Andover Seminary; professor of mental and moral philosophy at Amherst College; professor of church history in Union Seminary, New York; and afterwards of systematic in the last. Besides numerous lectures and addresses, he published *The Relations of Faith and Philosophy; The Problem of the Philosophy of History; The Idea of Christian Theology as a System;* and *The Reformed Churches of Europe and America.* Died in New York, in 1877.

SMITH. John Pye, born at Sheffield, England, May 25, 1774, was from 1800 to 1850 successively classical tutor, divinity lecturer, and principal of the Independent College at Homerton, where he was also for forty-three years pastor of the 'Old Gravel Pits Chapel.' He died at Guildford, Surrey, February 5, 1851.

SMITH, Sir Thomas, born at Saffron Walden, Essex, England, 1512, at fourteen entered Queen's College, Cambridge. He early distinguished himself as a Grecian, was made fellow of his college in 1531, and two years later became a public lecturer. He and his friend Cheke attacked the prevailing mode of pronouncing Greek, which differed widely from that now in use. At first strenuously opposed, S. and his colleague by patience conquered all the authorities except Gardiner, Bishop of Winchester. In 1539 S. traveled on the Continent, taking a doctor's degree at Padua; and on his return he became professor of civil law at Cambridge. Under Edward VI. he became a secretary of state (1548), and was knighted. While his patron Somerset was in office, he was employed as ambassador to Belginm and France. At the accession of Mary he lost all honors, only retaining a pension of £100 a year; but in Elizabeth's reign he again became a secretary of state, Chancellor of the Order of the Garter, and ambassador to France.

SMOOTHING-IRONS are domestic implements of iron or steel with a flat face for smoothing linen, &c. There are many varieties which mainly differ in the modes of heating and nature and attachment of the handle. The common *sad-iron*, consisting of a solid triangular heater and handle of cast iron, remains in use notwithstanding the drawbacks of heating it before a fire and its hot handle. These are removed in many S. I. of recent introduction by making the body of the iron hollow, and heating it by incandescent charcoal, the flame of gas or a lamp, or a red-hot iron heater. A handle of wood or of perforated iron, which in some kinds is detachable, is also substituted for the solid cast-iron one.

An *Italian Iron* for crimping and smoothing frills, &c., consists of a narrow hollow cylinder with one end closed and rounded and the other open. A tapering red-hot heater is introduced into it, and the articles to be ironed are pressed gently against the heated surface.

SMRI'TI, 'that which is remembered and handed down by tradition.' The Sanscrit term for the whole of the Post-Vedic literature, which is believed to be founded on direct revelation, though delivered by human authors. It includes the Laws of Menu, the Mahabharata and Ramayana, the Puranas and Tantras. It is opposed to Sruti, or revelation.

SNEEHÆTT'A, the highest peak of the Dovre chain, in Norway, rises from a mass of similar heights, a torn pyramid of mica-slate intersected with quartz. 7333 feet above the sea. Before the discovery of the Jotunfjelde, S. was regarded as the loftiest summit of Norway.

SNEEZ'ING consists in a violent and spasmodic action of the respiratory muscles. A deep inspiration is first taken, and the air is then forced violently through the nose, the mouth being closed, and the effort shaking the entire frame. The common cause of S. is irritation of the pituitary membrane of the nose, while in other cases S. may be excited even through the sense of sight and from irritation of the eye, through the sympathy which exists between the sense of sight and that of smell. Occasionally S. is excited by internal nervous causes, and independently of outward irritation of the nose or air-passages, and affections of the stomach or bowels are occasionally said to produce this effect. The custom of blessing a sneezing person has been long in vogue, and was practised by the ancients. Its origin is unknown, but in classical times S. during worship or sacrifice was regarded as a good omen.

SNIG, a species of eel found in many parts of England, and known by the olive-green color of its back, the under parts being a golden yellow. The term, however, like that of 'Grig,' is employed by fishermen in a vague and loose way.

SOFT'AS (Arab. 'burnt,' *i.e.*, with zeal for knowledge), a name given to the students in the Mohammedan colleges (*Medresse*), where they are taught theology and jurisprudence, and from which they pass into the Ulemas, taking their place among the imaums, muftis, or cadis. Their dress is a large white turban, and a long robe reaching nearly to the ground. In May 1876 a demonstration of these S. caused the downfall of the grand Vizier Mahmoud Pasha, shortly followed by the deposition of Sultan Abdul Aziz; and after the outbreak of hostilities with Servia and Montenegro, they formed from among their own number a battalion of volunteers to take part in the 'holy' war.

SOL'IS Y RIBADENEIRA, Antonio de, born at Alcàlà de Henares, 18th July 1610, studied law and theology at Salamanca, and in his eighteenth year produced a comedy, *Amor y Obligacion*. Its success gained him a patron in the Count de Oropesa, Viceroy of Navarre and Valencia, from whose service he passed to the Court of Madrid (1654). Here the Queen-Mother made him *Cronista Mayor* (1666); as such he wrote his *Historia de la Conquista de la America Septentrional* (Madr. 1684), whose 'copious and sustained eloquence places him,' says Ticknor, 'by the side of Mendoza and Mariana,' though in boldness and dignity their inferior. Among his comedies, *La Gitanilla de Madrid*, *Triumfos de Amor y Fortuna*, and *El Alcazar del Secreto*, are counted his masterpieces. Having taken the tonsure (1667), S. died at Madrid, 19th April 1686. There are French, Italian, and German versions of his *Historia*, and an English one by T. Townsend. See Ticknor's *History of Spanish Literature* (4th ed. 1871).

SOMBRERE'TE, a town of Mexico, state of Zacatecas, 65 miles N.W. of the town of that name, is the center of a silver-mining district, said to have contained the richest metallic veins ever discovered, but now almost worked out. Pop. 14,000.

SOM'ERS, John, Baron S. of Evesham, a celebrated English statesman, was born, probably 4th March 1652, at Worcester, where his father was an attorney. It was at first intended that he should adopt his father's profession, but in 1667 he entered Trinity College, Oxford, and in 1669 became a fellow of the Middle Temple, being called to the bar in 1676. He soon became known as a rising young lawyer and Whig politician. It was the Revolution which first brought him into real prominence. The Declaration of Rights was drawn up and presented by him, and he was a leading member of the convention Parliament. Under William III. he became successively Solicitor-General and Attorney-General, and in 1693 Lord Keeper of the Great Seal. In 1697 he was raised to the peerage, and made Lord Chancellor; but when the Tory influence shortly afterwards preponderated he was deprived of the seals (1700) and impeached by the House of Commons (1701), but ultimately acquitted by the House of Lords. The Whig reaction which followed Marlborough's first victories restored him to power, and he was instrumental in bringing about the union of England and Scotland in 1707. In 1710 he finally retired from office, and died 26th April 1716. Besides being a statesman of unusual acuteness and integrity, S. was a great orator, a sound lawyer, and a distinguished patron of literary men, such as Newton, Locke, Bayle, and Addison, the last of whom dedicated to him the first volume of the *Spectator*. S. was one of the first Englishmen to appreciate and assert the sovereign genius of Milton. A collection of state papers, from originals in his library, was edited under the title of the *S. Tracts* (1748–52), and a new edition was published by Sir Walter Scott (1809–15).

SOMETSU'KI WARE, a species of Japanese porcelain decorated under the glaze with ornaments in a blue pigment obtained from cobalt ore. It is made principally for domestic use. Another kind, manufactured at Hizen for the foreign market, bears colored enamels fused on the glaze.

SONDELI (*Sorex murinus*), a species of shrew-mice, also named the Moudjouron, and musk-rat of India. It exudes a strong odor of musk from the inguinal or abdominal glands. Although named 'musk-rat,' it is not a true rat, belonging to the order *Insectivora;* yet it is rat-like in form and size. Its fur is a chestnut hue above and grey beneath.

SONDERBURG, a fortified town of Prussia, province of Schleswig-Holstein, on the W. coast of the island of Alsen. It was in great part destroyed by the Prussian batteries April 5, 1864, and its fine old castle is now converted into a Prussian barrack. Pop. (1875) 5834.

SONE or SOANE, a large river of Central India, rising in the native state of Rewah, only a few miles from the sources of the Nerbudda and the Bytarni, and flowing N.E. joins the Granges about 17 miles above Patna city, after a total course of 465 miles. It has been identified with the *Eranoboas* of the Greek geographers, and there is little doubt that its former junction with the Ganges was at Patna itself, exactly opposite the confluence of the Gogra. For 350 miles it runs through a hilly tract, and for 100 miles through the plains of S. Behar; but it has throughout the character of a mountain-torrent, and is useless for navigation. Immense quantities, however, of bamboos are floated down. The sandy bed is in some places 3 miles wide, and is entirely filled by floods during the rainy seasons; but in the summer the stream dwindles to 100 yards wide, and is fordable. It abounds with excellent fish. At Koelwar, where it is joined by its chief tributary, the Koel, it is crossed by the E. Indian Railway, on a lattice girder bridge.

SONTHALS (*Santáls*), an aboriginal hill tribe found in S. Bengal, India, who have attracted considerable attention. Their physiognomy is distinctly of a negroid type, but their philological and ethnical affinities have not been definitely ascertained. The S. are a nomad race, with little affection for home, but a strong reverence for mountains and rivers. They supply a large portion of the hired labor of the plains, especially in indigo factories. In 1855, owing to the exactions of Hindu landlords and moneylenders, they broke into an armed rebellion, which required to

be repressed by vigorous measures. At the same time the tract where they are most numerous was formed into a new district, with exceptionable regulations, called the Southal Pergunnahs. Area, 5488 sq. miles; pop. (1872) 1,259,287, of whom 850,000 are in British territory. The *district* of the S. covers the Rajmehal hills, and is also peopled by another aboriginal tribe of Pahariya Mals. The chief towns are Sahibgunje and Rajmehal, both on the Granges, where the river traffic is transferred to and from the railway. The capital is Dumka. In the last few years the S. have show a tendency to adopt Hinduism in its entirety. A few are Christians.

SOPHI'A DOROTHE'A, Electoral Princess of Hanover, known as the Princess of Ahlden, was born September 15, 1666, the daughter and heiress of Georg Wilhelm Duke of Braunschweig-Lüneberg-Celle. She was married, in spite of her extreme repugnance, in 1682 to her cousin, George Ludwig, Electoral Prince Hanover, afterwards George I. of England, and was the mother of King George II. and of Sophia Dorothea, the wife of Friedrich Wilhelm I. of Prussia. The severity of the treatment she experienced from her morose husband drove her to desperation, and she determined to fly with Graf Philipp Christoph von Königsmarck to Wolfenbüttel; but the intrigue having been discovered by the Grafin von Platen, the Graf was slain by the electoral guards as he came from the chamber of the Princess, July 1, 1694, and S., after having been divorced, December 28, 1694, was imprisoned in the old castle of Ahlden, where she died, November 13, 1726. See *Die Herzogin von Ahlden* (Leip. 1852).

SORDI'NO (Ital.) in music, a mute used in musical instruments to damp or deaden the sound. When the mutes are to be used, the musical direction is *con sordini* and when not *senza sordini*.

SOTH'ERN, Edward Askew, a successful modern comedian, was born in Liverpool, England, April 1, 1830. His earliest engagement on the stage was at the National Theater, Boston, Mass., in 1852. For the next six years he played at Wallack's and Keen's theaters, New York. In 1858 he appeared at the latter theater as 'Lord Dundreary,' in the play of *Our American Cousin*, a perfect piece of caricature which immediately hit the public fancy. It is to this exquisite piece of acting that Mr. S. owes most of his popularity. During the last twenty years he has repeated it many thousands of times in America, at the Haymarket Theater, London, and in the English provinces. Perhaps his next best character is 'David Garrick' in T. W. Robertson's play of that name. He died 20th January 1881.

SOUBISE', the name of an old French noble family, which brought all its titles and possessions into the family of Rohan by the marriage in 1557 of its last heiress with René II., Vicomte de Rohan.—Benjamin de Rohan, Seigneur de S., second son of René II., was born at La Rochelle in 1583, and early distinguished himself in the Huguenot cause. On the fall of La Rochelle he retired to London, where he died, October 9, 1642.—Charles de Rohan, Prince de S., with whom the family died out, was born at Paris, July 16, 1715. He early became a favorite of Louis XV., and accompanied him as aide-de-camp in his campaigns (1744–48). In 1748 he became lieutenant-general, and in 1751, by the influence of Mme. de Pompadour, governor of Flanders. On the outbreak of the Seven Years' War in 1756 he received the command of one of the two French armies, but after some successes he was disastrously defeated by Friedrich of Prussia at Rossbach, November 5, 1757, on which he returned to Paris, the subject of a thousand epigrams. In 1758 he led a new army to Germany, and, with the aid of the Duc de Broglie, achieved successes at Sondershausen (July 23) and Lützelburg (October 10). S. was now made a marshal, and in spite of several reverses kept the command until the peace, February 15, 1763. He now returned to court, where, after the death of Pompadour, he became the favorite of Dubarry. He was the only courtier who followed to the tomb the body of the king, and his devotion induced Louis XVI. to request him to retain his place as minister. S. died at Paris, July 4, 1787.

SOUNDING-BOARD, in a pianoforte, a piece of wood, usually the best Swiss fir, placed behind the strings in order that the resonance may be increased. Its edges are attached to the framing, leaving the central part to vibrate freely under the strings when they are struck. The term is also applied to a wood screen placed behind a speaker in halls and churches for acoustic purposes.

SOUTHBRIDGE, a town of Worcester Co., Mass., on the Quinnebaug River and a branch of the New York & New England Railroad, 70 miles from Boston. It is engaged in manufacturing, and is an important business center. Pop. 6465.

SOUTHERN ALPS, the name given to the central and loftiest portion of the great dividing range of the S. Island of New Zealand. Many of the peaks are perpetually snow-capped, the highest being Mount Cook (13,200 feet). The glaciers of the S. A. rival those of the Swiss Alps in magnitude, and on the W. side extend to within a few hundred feet of the sea-level.

SOUTHINGTON, in Hartford Co., Conn., 20 miles N. of New Haven. It is engaged in the manufacture of general hardware, carriage hardware, pocket cutlery, silver-plated ware, and watches. Pop. 5411.

SOUTH NORWALK, a seaport of Connecticut, on Long Island Sound, 42 miles by rail N.E. of New York, has 4 churches, 1 newspaper, and varied hardware manufactures. Pop. 13,956.

SOUTH PUEBLO, a city of Pueblo Co., Col., on the Arkansas River and the Denver & Rio Grande Railroad, and the terminus of the Atchison, Topeka & Santa Fe Railroad. It is engaged in agriculture, stock-raising, and manufacturing. It has extensive Bessemer steel works, and also smelting works. Pop. 12,000.

SOUTH'WELL, Robert, born at St. Faith's, Norfolk, England, in 1560, was educated at Douay, became a Jesuit at Rome in his sixteenth year, and in 1583 was appointed rector of the English Jesuit College there. Next year he undertook a mission to England, and became chaplain to the Arundels. For alleged complicity in a plot against Elizabeth he was sent to the Tower in 1592, where he was confined three years, and put to the rack ten times. Finally he was condemned to death February 20th 1595, and on the following day was hanged, drawn, and quartered. His literary compositions, chiefly poetical, and all on moral and religious subjects, have ever been in favor with Catholics.

SOUTHWORTH, Emma D. E. Nevitt, an American novelist, born at Washington, D.C., Dec. 26, 1818. Her publications are numerous, and have had a large circulation. Among them are the following: *The Family Doom, Prince of Darkness, The Bride's Fate, The Changed Brides, How He Won Her. The Widow's Son, The Bride of Llwellyn, The Bridal Eve, The Fatal Marriage, The Lost Heiress, The Wife's Victory, Retribution, The Curse of Clifton, Cruel as the Grave*, and *The Spectre Lover*.

SPAL'ATIN, Georg, born in 1484 at Spalt in Bavaria, was originally named Burchart, but called himself S. from his native place. After studying at Nürnberg, Erfurt, and Wittenberg, he became (1507) pastor at the village of Hohenkirchen, near Gotha. In 1512 he was appointed university librarian at Wittenberg, and in 1514 court chaplain and privy secretary at Dresden, in which position he had great political influence as the most trusted counselor of the Elector. He greatly advanced the cause of the Reformation as 'superintendent' at Altenburg, where he died 16th January 1545. The chief works of S. are his biographies of Friedrich the Wise (new ed. by Neudecker and Preller, Jena 1851) and Johann the Constant, his *Christliche Religionshändel* (published as *Annales Reformationis*, Leip. 1718), his history of the popes and emperors of his time, and his letters. See the biographies of S. by Schlegel (Jena 1693), and Wagener (Altenb. 1830).

SPAN'ISH MAIN, a name commonly given in the 16th and 17th centuries to the mainland of S. America from the Isthmus of Darien to the mouth of the Orinoco.

SPAR'TEL, Cape, the N.W. extremity of Africa, at the Atlantic entrance to the Strait of Gibraltar. It is a bold headland, with a range of basaltic columns like the Giant's Causeway.

SPAWNING OF FISHES. In all Vertebrates the sexes are distinct, but impregnation in fishes is, as a rule, effected externally to the body of the female. In some fishes (e. g., sharks) the male is provided with a pair of organs named claspers, and by means of these the male adheres to the female during the act of fecundation. Most fishes spawn by simply depositing their eggs, the male shedding the milt upon them. In some, e. g., the blennies, the young are retained within the parent body until they are ready to swim. Impregnation in this case must be internal.

SPEL'MAN, Sir Henry, born at Congham, Norfolk, England, in 1562, passed from Walsingham School to Trinity College, Cambridge, and thence to Lincoln's Inn (1580). He served as high sheriff of Norfolk (1604), as a commissioner for settling land-titles in Ireland, and for inquiring into the exaction of English fees; then, having been knighted about 1612, withdrew from public life and devoted himself to archæology and a study of the Old English tongue. He died in 1641.

SPENCER, a town of Worcester Co., Mass., on a branch of the Boston and Albany Railroad, 12 miles from Worcester. It is engaged in manufacturing boots, shoes, woollen cloth, and wire. Pop. 7466.

SPICH'EREN, or SPICH'ERN, a village in the circle of Forbach, Elsass-Lothringen, 2¼ miles S. of Saarbrucken, with 1000 inhabitants. During the Franco-German War the French strongly entrenched themselves on the S. Berg (875 feet), with its steep, scantily-wooded slopes, but after a sharp engagement, 6th August 1870, were obliged by the Prussians, under General von Goeben, to retreat though numerically superior.

SPIDER-CRAB, the name given to various Crustacean genera included in the order *Decapoda*, and belonging for the most part to the family *Maiadæ*. The typical species *Maia Squinado* or spinous S. C., is four or five inches long; but the other forms so named are very much smaller.

SPIEL'HAGEN, FRIEDRICH, a German novelist, was born at Magdeburg, 24th February 1829. Brought up at Stralsund, where his father was *baurath* from 1834, he studied at Berlin, Bonn, and Greifswald, and having successively been tutor, actor, and officer in the Landwehr, took finally to literature, settling at Berlin in 1862. His 'social' novels, most of which have been translated into English, are over-long and surcharged with invectives against the clergy and aristocracy, but their power is great, and from first to last they have steadily improved.

SPINAL NERVES, the name applied to the paired nerves which arise from the *spinal cord*, and which are distributed to the various parts of the body. The S. N. are so named in contradistinction to the *cranial nerves*, or those which originate from the brain itself. Thirty-one pairs of S. N. arise from the spinal cord of man. They pass from the spinal cord and spine through the *intervertebral foramina*, or openings between the bodies of the vertebræ. Eight pairs are *cervical;* twelve are *dorsal* nerves, also named *thoracic;* five are *lumbar*, five *sacral*, and one *coccygeal*. Each spinal nerve arises by *two* roots, an anterior and posterior, from the spinal column. The posterior root has a nerve mass or *ganglion*, which is wanting in the anterior. The fibres of the anterior roots are *motor* in nature, *i. e.*, impulses travel by these roots outwards *from* the cord or brain to the body. The fibres of the posterior roots are *sensory*, *i. e.*, impulses are conveyed by these fibres to the cord or brain. The anterior and posterior fibres unite just beyond the nervous ganglion to form a single nerve-trunk, in which the two sets of fibres are indistinguishable.

SPIR'IT LEVEL. A S. L. consists essentially of a hermetically sealed slightly-curved glass tube nearly filled with alcohol, and containing a small bubble of air, which exactly occupies the middle point when the tube is perfectly horizontal. The tube is commonly mounted in a case of wood, faced with brass, which is laid on the surface to be tested. Telescopes, theodolites, and other instruments of precision are provided with spirit levels.

SPIR'ULA, a curious genus of cuttlefishes belonging to the *Dibranchiate* division of the Cephalopoda, and distinguished by an internal chambered shell, the *septa* or partitions of which are perforated by a ventral tube or *ipuncle*. *S. Peronii* is the common species, the shells of which are cast up by thousands on the coasts of New Zealand, though, curiously enough, the living animal is rarely met with.

SPOON (Old Eng. *spón*, a 'chip' or 'splinter' of wood), a familiar domestic implement used in carrying food to the mouth, and for other purposes. The earliest spoons were probably bivalve shells to which handles were attached for convenience. Many ancient Egyptian spoons of glass, wood, stone, and ivory preserve the primitive shell form. Horn was formerly a very common material for S.-making, and out of its use arose the proverb, 'To make a S. or spoil a horn,' signifying a determination to accomplish an object at any cost. German-silver spoons are now chiefly in use. They are stamped from sheet metal by means of 'punches,' and 'bolsters' of steel worked by presses. In the subsequent operations the 'blank' is 'pippened,' filed, bowled, and set, and buffed or polished; better-class spoons are finished by electroplating, with silver or gold. Christening gifts in the Middle Ages took the form of *Apostle spoons*, so named because the stems bore figures of the Apostles.

SPOTTISWOODE, WILLIAM, LL.D., F.R.S., an English mathematician, was born at London, Jan. 11, 1825. From Eton and Harrow he passed to Balliol College, Oxford, where he graduated in 1845, and subsequently gained two mathematical scholarships. On quitting Oxford he became manager of the business of the Queen's printer, devoting his leisure to the study of physical and mathematical science, to philosophy and Oriental languages. He is a member of many scientific societies, to whose transactions he has contributed papers of unquestioned ability. He was president of the British Association at the Dublin meeting of 1878, and succeeded Hooker as president of the Royal Society in November of the same year.

SPRAGUE, WILLIAM BUELL, D.D., was born at Andover, Conn., 16th Oct. 1795, studied at Yale and Princeton, settled as pastor at W. Springfield in 1819, transferred to Albany, N. Y., in 1829, but in 1869 went to Flushing, Long Island, where he died 7th May 1876. S. wrote many evangelical sermons, &c. His chief work is *Annals of the American Pulpit* (1859–60).

SPRENG'ER, ALOYS, born at Nassereut, in Tirol, 3d September 1813; from 1832 studied medicine and Oriental languages at Vienna, and going to London (1836), assisted the Earl of Munster in his *Military Science of the Mohammedan Nations*. In 1843 he sailed for India, and there promoted the establishment of Western culture as founder of a native press, as president of the College of Delhi (1845), as secretary to the Asiatic Society (1850), and in various other capacities. He returned to Europe (1857), and became honorary professor of Oriental Languages and Literature at Bonn.

SPRINGFIELD, a city of Greene Co., Mo., on the St. Louis & San Francisco Railroad, 241 miles S.W. of St. Louis. It is the most important place in this section of the state, and is surrounded by a fine agricultural district. Pop. 12,000.

SQUIRR'EL-MONK'EY (*Callithrix*), a genus of *Platyrhine* or Old World monkeys, found in Brazil, and closely resembling squirrels in appearance. *C. cinereus* is a familiar species, also named the Saimiri; another example is the *C. torquatus*, or Collared Callithrix. These monkeys are inoffensive and intelligent, and may become very tame.

STAHL, FRIEDRICH JULIUS, an eminent German jurist, was born of Jewish parents at Münich, January 16, 1802; at the age of seventeen passed over to Christianity, became professor at Würzburg (1832), Erlangen (1835), Berlin (1840), and sought to combat 'radical' liberalism, basing both jurisprudence and civil polity on Scripture. A member of the First Prussian Chamber from 1849, he was one of the ablest leaders of the reactionary party in Prussia, and opposed with eloquence and vigor the broadening of the Prussian constitution. He died at Brückenau, August 10, 1861. S.'s great work is *Philosophie des Rechts nach Geshichtl. Ansicht* (4th ed. 1870), but he was an incessant and brilliant polemic, and wrote numerous pamphlets and treatises.

STAINES, an interesting old English town, in Middlesex, on the left bank of the Thames, 6 miles S.E. of Windsor, and 18 S.W. of London by the South-Western Railway. Its church of St. Mary, rebuilt in 1828, has a tower by Inigo Jones (1631), and the granite bridge of three arches, which here crosses the river, was designed by Rennie (1832), and cost £40,000. A stone (hence the town's name) bearing date 1285 here marks the limit of the Thames Conservancy. A Roman Catholic church, in Gothic style, was erected in 1868. There are mustard mills, breweries, and market-gardens. S. has a well-known race-course. Pop. (1881) 4933.

ST. ALBANS, in Franklin Co., Vt., on the Central Vermont Railroad, at its junction with the Missiquoi Railroad, 63 miles from Montreal, and 3 from Lake Champlain. It is the great butter market of New England, and a trade center. Pop. 7193.

STALL'BAUM, JOHANN GOTTFRIED, born at Zaasch in Prussian Saxony, 25th September 1793, in 1808 entered the Thomasschule, and in 1815 the University of Leipzig, whither after two years of teaching at Halle (1818–20) he returned to be an undermaster in his old school. He became its rector (1835), and in 1840 was appointed extraordinary professor, retaining both offices down to his death, 24th January 1861. S. did good service to classical philology by his critical edition of Plato's Works (12 vols. Leip. 1821–25), a separate edition of his text (8 vols. Leip. 1825), and an edition with a commentary in the *Bibliotheca Græca* (9 vols. Gotha, 1827; new ed. 1867). Besides other editions of the classics, he published *Ueber den innern Zusammenhang musikalischer Bildung der Jugend mit dem Gesammtzwecke des Gymnasiums* (Leips. 1842), *Das Griechische und Lateinische in unseren Gymnasien* (Leip. 1846), &c.

STANDISH, MILES, one of the 'Puritan fathers,' and best known as the hero of Longfellow's poem, *The Courtship of Miles S.*, seems to have been born in Lancashire, England, about 1584, and claimed to be a cadet of the knightly family of S. of Duxbury Hall in that county. After serving for some time in the Netherlands, where he attained the rank of captain, S. came to America in the *Mayflower* in 1620, rendered good service to the young colony in its dealings both with Indians and with the mother country. He founded the township of Duxbury in Plymouth Co., Mass., where he died, 3d October 1655, and where a monument to him was commenced in 1872. His friendship with John Alden is well known to all readers of Longfellow. Other interesting information about S. is given in Justin Winsor's *History of Duxbury* (1849).

STAN'LEY, THOMAS, an English scholar of great repute in his day, was born at Cumberlow, in Hertfordshire, in 1625, educated at Pembroke Hall, Cambridge, and entered the Middle Temple. Between 1655 and 1662 S. published his *History of Philosophy* in three parts, still a useful storehouse of facts, the best edition of which is that of 1743, with a life of the author. In 1663 appeared his edition of *Æschylus* with a Latin translation and commentary, a work long since superseded. He published also various poems and translations from classical and Continental authors. He died in London, April 12, 1678. See the *Life* prefixed to Brydges' edition of *S.'s Poems* (1814–15).

STANS'FIELD, CLARKSON, an English landscape-painter, born of Irish parentage, at Sunderland, in 1793. During a roving

youth spent at sea he came in casual contact with Douglas Jerrold, and procured the lasting friendship of Captain Marryat, who early appreciated his artistic powers. He was latterly engaged as captain's clerk on board a man-of-war's-man, but in consequence of a fall from the fore-topgallant mast-head retired from the navy, and procured employment as a scene-painter first at the Edinburgh Theater-Royal (where he formed a life-long intimacy with David Roberts), then at the Old Royalty, London, and eventually at Drury Lane. After the success of the first picture he exhibited at the British Institution in 1826—'Market-boats on the Scheldt'—he devoted himself more and more to easel-painting. In 1828 he obtained a prize of fifty guineas from the institution, in 1832 was made A.R.A., and R.A. three years later. Together with Roberts and others he established the Society of British Artists in 1830. Among his more famous pieces are 'Wreckers off Fort Rouge,' 'A Calm at Sea,' 'Mount St. Michael,' 'Views of Venice,' 'Battle of Trafalgar,' 'Battle of Ischia.' 'The Abandoned,' 'Against Wind and Tide,' 'Siege of St. Sebastian,' 'The Bass Rock.' Frequent visits to the Continent supplied S.'s ready brush with such a variety of subjects that his work never sank into sameness. Although one of the most fertile and effective of scene-painters, his art is characterized by elaboration rather than breadth, and its fidelity to nature, delicacy of finish, and harmony of color, have obtained for S. the name of 'the English Vandervelde.' He died at Hampstead, 18th May 1866.

STAN'TON, EDWIN M'MASTERS, an American statesman, was born at Steubenville, Ohio, December 19, 1814. Admitted to the bar in 1836, he rose rapidly to the head of his profession, and while acting in California in 1858 as counsel for the United States in certain important land cases, he did good service to students of history by collecting a large mass of documents relating to Mexican affairs. In 1860 S. was appointed by Buchanan Attorney-General, and in 1862 he became Secretary of War under Lincoln. In this capacity he showed a zeal and prudence so strongly appreciated by the nation, that when in 1867 he was requested by President Johnson to resign his portfolio, the Senate refused to concur in the suspension, and the unseemly strife was only ended in May 1868 by S.'s voluntary resignation. On December 20, 1869, he was nominated by President Grant associate Justice of the United States Supreme Court; but his incessant labors had undermined his health, and he died on December 24 of the same year.

STANTON, ELIZABETH CADY, an American advocate of 'Woman's Rights,' born at Johnstown, N.Y., Nov. 12, 1815. She was a daughter of Daniel Cady, and in 1840 married Henry B. Stanton. She has delivered many addresses, and has written much in favor of granting the right of suffrage to woman.

STARKE, JOHN, an American patriot, born at Londonderry, N. H., Aug. 28. 1728. He served under Abercrombie against the French in 1758–59. On Aug. 16, 1777, he defeated a force of Hessians, under Col. Baum, near Bennington, and on the same day he defeated a force commanded by Col. Breymann. For this Congress made him brigadier-general, and he afterwards served under Gates and Washington. At the close of the war he became a farmer. Died at Manchester, N. H., May 8, 1822.

STEATOR'NIS, or 'Fat Bird' (*S. Cœripensis*), a species of *Caprimulgodæ*, or Goat-Sucker, found in Trinidad, and so named from the fat obtained by the Indians from the young birds, which are knocked down in great quantities by long poles. The fat is melted in clay pots, and is highly valued by the natives.

STEDMAN, EDMUND CLARENCE, an American poet, born at Hartford, Conn., Oct. 8, 1833, and was educated at Yale College. In 1859 he came to New York, and has since been engaged in literary work. He has published, *Poems Lyric and Idyllic* (1860), *Alice of Monmouth, and Other Poems* (1864), *The Blameless Prince, and Other Poems* (1869), and others.

STEELL, SIR JOHN, a Scottish sculptor, was born at Aberdeen in 1804, and received his first artistic education in the Royal Academy, Edinburgh. On his return from Rome in 1833 his colossal model of Alexander and Bucephalus attracted attention; and from that period onwards his career has been one of distinguished success. The figure of Queen Victoria for the front of the Royal Institution in Edinburgh procured him in 1844 the title of Sculptor to her Majesty in Scotland; and after the unveiling of the national monument to the Prince Consort in Charlotte Square, 17th August 1876, the artist was knighted at Holyrood Palace. To the embellishment of Edinburgh he has further contributed by the statue of Sir Walter Scott on the Scott monument, the equestrian statue of Wellington, the statues of Lords Melville and Jeffrey, of Professor Wilson (1865) and Dr. Thomas Chalmers (1878). In the hall of Greenwich Hospital is his statue of Lord de Saumarez; in the cathedral at Glasgow his monument to the 93d Highlanders; and in the Cathedral at Dunkeld his monument to the 42d Royal Highlanders. At Calcutta the statues of Dalhousie and Wilson are his; and at New York the colossal statues of Sir Walter Scott (1872) and Robert Burns (1873) in the Central Park.—GOURLAY S., brother of the preceding, born at Edinburgh in 1819, received his art-education at the Board of Manufactures under Sir William Allan, and studied privately under Robert Scott Lander, R.S.A. He first exhibited in 1832. Among his principal works are 'Robert Burns turning up the Monse's Nest' (1839; engraved); 'The Master of Ravenswood parting with Caleb Balderstone' (1842); 'Scene from *The Monastery*' (1843); 'Llewelyn and his brave Hound Gelert (1857); 'The Death of Old Mortality' (1859); 'The Highland Raid' (1863); 'A Cottage Bedside at Osborn' (1863; engraved); 'The Pass of Leny—Cattle going to the Tryst'; 'A Challenge' (1876), &c.

STEELTON, in Dauphin Co., Pa., on the Pennsylvania Railroad, at its junction with the Philadelphia & Reading, three miles E. of Harrisburg. It manufactures Bessemer steel, steel rails, switches, and other articles, and has a steam flouring mill with a capacity of 500 barrels per day. Pop. 6000.

STEEN'WYCK, HENDRIK, a Dutch painter, born at Steenwyck in 1550, died about 1603. He excelled in the execution of church interiors, ablaze with tapers. His son Hendrik, called 'the Young S.,' was born about 1589, and became the friend of Vandyke, for whom he painted backgrounds. He died in London, in what year is unknown.

STEEVENS, GEORGE, an English critic, was born at Stepney, Middlesex, 10th May 1736, educated at Kingston-on-Thames and Eton, and in 1754 became a scholar of King's College, Cambridge. His first publication, *Twenty of the Plays of Shakspeare* (1766), at once secured him a position among the literary workers of his time, and Johnson gladly accepted his assistance for the edition of Shakspeare which was completed in 1773; but after the appearance of Malone's 'Supplement' in 1780, S. set to work on his own account as a rival commentator, and in 1793 he produced a corrected text of the great dramatist in 15 vols. Though the work was as remarkable for the audacity of its gratuitous alterations as for its exhibition of learning and ability, it met with complete success, and remained the standard edition till the publication of Knight's in 1838. He died at Hampstead, January 22, 1806.

STEFF'ENS, HENRIK, was born May 2, 1773, at Stavanger in Norway, entered Copenhagen University in 1790, and devoted himself to botany and mineralogy. After traveling at the expense of the Danish state in Norway (1794), and in Germany (1798), he was successively appointed lecturer at Copenhagen University (1802), professor at Halle (1804), at Breslau (1811), and at Berlin (1832), where he died, 13th Feb. 1845.

STENOCHROMY (Gr. *stenos*, 'short,' and *chroma*, 'a color;' hence a short way of coloring), a process of Polychrome Printing, recently brought to considerable perfection by Mr. Otto Radde of Hamburg. A color-block representing a picture or design is built up after the manner of a mosaic, with soapy compositions, prepared by thoroughly incorporating pure pigments with fatty substances. The color-compositions melt with heat, solidify on cooling, and possess the same specific gravity and yielding power. The method of forming the color-block is as follows:—

A shallow wooden frame of the size of the intended picture is taken, and into a portion of it, marked off with strips of brass placed edgewise, a quantity of liquid color is poured. As soon as the color has solidified, the required outline is traced on it, the brass strips are removed, and the color is cut vertically to the tracing by means of a peculiar knife. Another compartment or cell is then formed with the pieces of metal, and a second color is poured in and cut vertically as required. The same plan is followed with all the other colors; and when the picture is completed, the surface is leveled, and impressions are taken on paper of an absorbent nature with slight pressure in a kind of lithographic press. The stenochrome is finished by an overprint from a stone which marks the outlines. For highly-finished pictures from two to four over-prints are necessary to obtain proper blending effects.

STE'PHEN, JAMES, born at Pode, Dorsetshire, in 1759, of an Aberdonian family, was educated at Winchester. After serving as a parliamentary reporter, he received a post in the W. Indian island of St. Christopher's, there gained a thorough mastery of colonial law, and returning home with a large fortune became a celebrated advocate in prize cases before the Privy Council. Entering Parliament for Tralee, and appointed under-secretary for the colonies, he warmly espoused the anti-slavery cause, and for his suggestion of the successful Continental Blockade (1803) was created a master of the Court of Chancery. He died at Bath, 10th October 1832.—His son, HENRY JOHN S. (1787–1864), serjeant-at-law, was author of a *Treatise on Pleading in Civil Actions* (1824); *Summary of the Criminal Law* (1834), *New Commentaries on the Laws of England* (1841; 7th ed. by his son James S., 1874, &c.).—The third son, SIR JAMES S., born at Lambeth, 3d January

1789, having graduated LL.B. from Trinity Hall, Cambridge (1812), was called to the bar at Lincoln's Inn 1813). Appointed counsel to the Colonial Office and Board of Trade, he held these posts till 1834, when he became under-secretary of state for the colonies in Melbourne's Ministry. Ill-health obliged him to retire from office (1847), when he was knighted; but two years later he accepted a call to the chair of modern history at Cambridge, which he occupied down to his death at Coblenz, 15th September 1859.—Sir James Fitzjames S., eldest son of the preceding, was born in London, March 1829, and educated at Eton, King's College, London, and Trinity College, Cambridge, graduating B.A. (1852). Called to the bar of the Inner Temple (1854), he traveled the Midland Circuit; and becoming Queen's Counsel (1868), was recorder of Newark-on-Trent (1859–69), and legal member of the Council of the Viceroy of India (1869–72), as such being author of the Indian Evidence Act. He was knighted, and in 1875 became Professor of Common Law at the Inns of Court. In 1873 he unsuccessfully contested Dundee as a moderate Liberal. In November 1878, when the policy of the English Government in reference to the Ameer of Afghanistan was vehemently assailed, S. was one of its most unflinching champions.—His younger brother is Leslie S. (born 1832), late fellow of Trinity Hall, president of the Alpine Club, and editor of the *Cornhill Magazine*.—Sir George S., the first James S.'s youngest son, was born at St. Christopher's in 1794, and, formerly a solicitor, was called to the bar in 1849, traveling the Northern Circuit. Like his father, an earnest abolitionist, he was also active in the reform of parochial relief, the police force, and imprisonment for debt, earning thereby the honor of knighthood (1837). In 1855 he emigrated to Victoria.

STE'PHEN, St., King of Hungary (997–1038), was canonized after his death in recognition of his services as the introducer of Christianity into Hungary. An Order named after him exists in Hungary, and he is the patron of numerous churches.

STE'PHENS, Alexander Hamilton, an American statesman, was born at Crawfordville, Georgia, February 11, 1812. He was educated at the University of Georgia, and was called to the bar in 1834. After sitting for some years in the Georgia House of Representatives, he was elected a member of the United States House of Representatives, where he sat from 1843 until 1859, being a prominent member of the Democratic party. In the disputes which preceded the Civil War, while opposing the *policy* of secession, he maintained the *right* of a State to secede from the Union. On the outbreak of the struggle he became a member of the Confederate congress, and Vice-President in the Provisional Government, being afterwards confirmed in that post under the so-called 'permanent constitution.' At the end of the war he was confined for five months as a state prisoner in Fort Warren, but was released on parole in October 1865. He was twice elected to Congress, where he maintained his position as a staunch Democrat. Died at Atlanta, Ga., March 4, 1883.

STEPHENS, Ann S., Author. Born March 30, 1810, at Humphreysville, Derby, Conn. Her father, John Winterbotham, in partnership with General Humphreys of General Washington's staff, built and operated the first broadcloth manufactory in America, and for many years was the leader in that industry. She married, in 1831, Edward Stephens, a merchant of Portland, Maine, and a member of one of the old families of Plymouth, Mass. During her residence in Portland she published the *Portland Magazine*, which attained a large circulation. In 1838 she removed to New York City, where she edited *The Ladies' Companion*, then the leading periodical in the United States, and subsequently became editor of *Graham's Magazine*. About 1840 she became associate editor of *Peterson's Magazine*, in which she has remained up to the present day, and where most of her books have first appeared in serials. Her first novel issued in book-form was *Fashion and Famine*, which had an unprecedented sale, was translated in almost every European country, and placed its author in the front rank of the *littérateurs* of her date. Then followed *The Old Homestead*, *Mary Derwent*, and a succession of novels, all distinguished by vigor of style and versatility of subject, and all received with marked favor by the reading world. In fact Mrs. Stephens' career as an author is an exceptional instance of uninterrupted success in literary labor throughout half a century, during which time she has numbered among her friends most of the distinguished men and women of her day.

STEU'BENVILLE, a town of Ohio, in a district with rich deposits of bituminous coal, 70 miles from Pittsburg by rail, has 17 churches, 4 newspapers, a large nail-factory, blast furnaces, foundries, machine-shops, boiler-works, an oil-refinery, &c. Pop. (1870) 8107. Present pop. 13,800.

STEVENS, Isaac Ingalls, an American general, born at Andover, Mass., March 25, 1818, and graduated from West Point in 1839. He served with distinction during the Mexican War, winning promotion by his gallantry at Contreras, Chernbusco, and Chapultepec. In 1861 he was made brigadier-general of volunteers, and in 1862, major-general. He participated in second Bull Run, and on Sept. 1, 1862, while at the head of his division, and leading a charge against the enemy, he was shot and instantly killed.

STE'VENS, Thaddeus, an American statesman, was born at Peacham, Vermont, April 4, 1793, graduated at Dartmouth College in 1814, was admitted to the Pennsylvanian bar in 1816, and soon acquired a large practice. In the presidential campaign of 1828 he opposed Jackson, was repeatedly a member of the State Legislature from 1833, was chosen in 1836 a member of the Convention to revise the State constitution, became a canal commissioner in 1838, and took an active part in procuring for Pennsylvania a public-school system. In 1842 he was elected to Congress, of which he remained a member uninterruptedly till his death at Washington, 11th August 1868. S. was a keen anti-slavery politician, a bitter enemy of the South; and by the force of his convictions, no less than his business talents, rose to be one of the leaders of the Republican party. He played a foremost part in the famous impeachment of President Johnson.

STEVENS POINT, in Portage Co., Wis., on the Wisconsin River, and on the Wisconsin Central and another railroad. It is largely engaged in lumbering, and has flour and saw mills, planing mills, foundries, and shingle mills. Pop. 7000.

STEW'ART, Alexander Turney, an American millionaire, was born near Belfast, Ireland, 27th Oct. 1802, studied at Trinity College, and emigrated in 1818 to New York, where he taught classics and mathematics. Having lost in trade the little money he had taken with him, he returned to Ireland, disposed of some remaining property, and investing in Irish laces, returned to New York to open in Broad Street (1823) the store, which subsequently expanded into the largest dry-goods establishment in the world, with branches in England, Scotland, Ireland, France, and Germany, besides factories for woollens, carpets, hosiery, &c., in the United States, England, and Scotland, the whole employing some 8000 persons. S. also became a large holder and improver of real estate in and around New York, Saratoga, &c., and eventually acquired a fortune only, if at all, inferior to that of Astor and that of Cornelius Vanderbilt, the railway speculator. He despatched a vessel with breadstuffs to Ireland during the famine of 1846, erected the model Garden City on Long Island, near Brooklyn, established a home for working-girls in New York, and contributed large donations to the sufferers by the Chicago fire (1871) and the Franco-German War. He was president of the United States Commission at the Paris Exhibition of 1867, but took almost no other part in public affairs. He died childless, 10th April 1876, leaving his estate, with the exception of certain legacies, to his wife. A search for next of kin called forth over 2000 claims, but a more startling incident was the mysterious abstraction of the body of the deceased in November 1878. The perpetrators of this ghastly deed, still undetected, are supposed to have been actuated by the hope of ransom.

STEW'ART, Balfour, LL.D., F.R.S., an eminent physicist, was born at Edinburgh, Scotland, November 1, 1828. After passing several sessions at the Universities of St. Andrews and Edinburgh, he went out to Australia, where he engaged in business from 1852 to 1854. In 1855 he returned to England, served for a few months in Kew Observatory, of which after being for three years assistant to Forbes, professor of natural philosophy at Edinburgh, he was appointed director (July 1, 1859). He has also filled the chair of natural philosophy at Owen's College, Manchester, since July 7, 1870. As a meteorologist he enjoys a wide reputation. He is also one of the founders of spectrum analysis, being the first who experimentally established the equality between the radiative and absorptive bodies (1859). For these researches he obtained the Rumford medal of the Royal Society in 1868. In conjunction with Professor Tait he investigated the Rotation of a Disk in Vacuo (*Philosophical Transactions*, 1865–66).

STICH'OMANCY (Gr. *stichos*, 'a line,' and *manteia*, 'divination'), a form of bibliomancy in which the future is augured from lines in a book taken haphazard.

STICK'-INSECTS, the name applied to certain very remarkable insects belonging to the order *Orthoptera*, and to the family *Phasmidæ*. The body exactly mimics a small piece of dried twig, and when at rest the legs are disposed in an irregular manner so as to increase their resemblance to pieces of stick.

STIEL'ER, a famous German cartographer, was born at Gotha 26th February 1775, studied law at Jena and Göttingen, received an office in the ministerial department at Gotha in 1797, became a member of council in 1829, and died 13th March 1836. His principal works, masterpieces of art and science, are a *Hand-Atlas*, issued in conjunction with Reichard (75 maps, Gotha 1817–33; new ed. by Petermann, 90 maps, 1872), and a *Schul-Atlas* (Gotha 1821).

STILETT'O (Ital. from Lat. *stilus*, 'a pointed instrument used in writing'), a short pointed dagger introduced in the Middle Ages, and even yet well known in Southern Europe.

STILL, JOHN, D D., born at Grantham, in Lincolnshire, England, about 1543, studied at Christ's College, Cambridge, became Master of St. John's (1574) and of Trinity (1577), was made bishop of Bath and Wells (1592–93), and died 26th February 1607–8. S. has an obscure place in English literature as the supposed author of the second oldest comedy in the language, *Grammer Gurton's Needle*, a piece of low rustic humor in rhyme, turning on the loss and recovery of the needle with which Grammer Gurton was mending the breeches of her man Hodge.

STILLWATER, a city of Washington Co., Minn., at the head of Lake St. Croix. It is engaged in mercantile pursuits and the manufacture of lumber and other articles; and is surrounded by a rich agricultural region. Pop. 13,060.

STING, the name given to the offensive apparatus occurring as a terminal appendage to the abdomen of certain insects, notably the Bees, Wasps, Ants, and other *Hymenoptera*. The S. or *aculeus* is a sharp-pointed appendage protected by two lateral processes. A poison-gland communicates with the S., the secretion of this gland being introduced by the S. into the wound.

STI'PER STONES, or Arenig formation, the lowest series of rocks in the Silurian system. It consists of several thousand feet of flags, shales, and siliceous or quartzose sandstones with contemporary igneous rocks. The formation is analogous to the calciferous sandstones, &c., in the state of New York. About eighty species of fossils have been detected in the English rocks of this period, though with the exception of anelid-burrows, specimens are not abundant.

STIR'LING, JAMES HUTCHISON, LL.D., was born at Glasgow, Scotland, June 22, 1820, entered Glasgow University in 1833, and studied with distinction for nine consecutive winter sessions in Arts and Medicine, graduating in the latter faculty in 1842. He practised in Wales for some years, but on the death of his father in 1851 relinquished his profession, and devoted himself wholly to metaphysics and literature.

STIR'LING, WILLIAM ALEXANDER, EARL OF, a Scottish poet and politician, belonged to a family which since the middle of the 15th c. had been settled in Clackmannanshire, where it held the lands of Menstrie. The poet, who was the seventh baron of Menstrie, was born in 1580, in his youth traveled on the Continent as tutor and companion to the Earl of Argyle, and followed James VI. to London, where his talents and accomplishments raised him high in favor at court. Knighted in 1614, he obtained in 1621 a grant of Nova Scotia in America (though it had previously been discovered and partly occupied by the French), of which he was appointed 'hereditary lieutenant,' with the right of creating an order of baronetcy on payment of one hundred and fifty pounds. In 1626 he became Principal Secretary of State for Scotland, in 1630 was created Earl of S., and died in London, 12th September 1640.

ST. JOHNSBURY, in Caledonia Co., Vt., on Passumpsic River. It is extensively engaged in manufacturing, and the works of the Fairbank's patent weighing scales are located here. Pop. 5800.

STOCK'MAR, CHRISTIAN FRIEDRICH, FREIHERR VON, a celebrated diplomatist, was born at Koburg, 22d August 1787. He studied medicine, and practised first in his native city, and then for two years in the army. In 1816 he was appointed physician to Prince Leopold of Koburg, to whom he subsequently became private secretary. His tact, sagacity, elevation of character, and knowledge of affairs procured him the confidence of the prince, and led to his taking a prominent part in European diplomacy. Among the many delicate negotiations with which he was intimately concerned were the accession of Leopold to the Belgian throne (1831), the marriage of Prince Ferdinand of Koburg with Queen Maria II. of Portugal (1836), and the marriage of the Prussian Crown Prince with the Princess Victoria of England (1858). He was the beloved friend and trusted counselor of Prince Albert and Queen Victoria, and in Theodore Martin's *Life of the late Prince Consort* (vol. i. 1874, vol. ii. 1876) may be traced the rare qualities of head and heart which gained him alike power and popularity. Ennobled in 1821, he was made Freiherr of Bavaria in 1831. He died at Koburg, 9th July 1863.

STODDARD, RICHARD HENRY, an American poet, born at Hingham, Mass., July, 1825. He became a mechanic, but early in life began to give evidence of his poetic genius. Since 1870 he has devoted himself to literary work. Among his works are the following: *Footprints* (1849), *Adventures in Fairy Land* (1853), *Songs of Summer* (1857), *The King's Bell* (1862), *Little Red Riding Hood* (1865), *Abraham Lincoln, a Horacian Ode* (1865), *Putnam the Brave* (1869), and *Female Poets of America*.

STONE, CHARLES P., an American general, born at Greenfield, Mass., 1826, and graduated from West Point in 1845. He served throughout the Mexican war, and was promoted for gallantry at Molino del Rey and Chapultepec. In 1856 he resigned from the army, but at the outbreak of the civil war entered the Union service, and was made brigadier-general of volunteers. In 1862 he was placed under arrest and confined in Fort La Fayette for nearly a year, although no charges were made against him. He afterwards served under Gen. Banks, and was present at the siege and capture of Port Hudson. In 1864 he resigned from the army, and in 1870 entered the service of the Khedive of Egypt. He has since returned to the U. S.

STONE, PRESERVATION OF. Many processes have been devised for preventing the destruction of buildings and monuments by atmospheric influences, but as yet the results have not been entirely satisfactory. Fatty and oleaginous substances for filling the pores of the stone are efficacious only when renewed from time to time. Several inventors have employed *mineral* solutions with fair success. Kuhlmann chose an aqueous solution of silicate of potash (water-glass), and applied it to the Louvre and the cathedral of Notre Dame in Paris. Fluosilicic acid washed with an alkaline solution, alumina soap, a silicate coated with asphaltum varnish, fuller's earth in diluted hydrofluoric acid, and an alkaline silicate washed with chloride of calcium solution, have all been suggested. The last-mentioned process, Ransome's patent, has so far received most favor. The silicate is brushed over the stone, and when it has dried the other solution is applied; double decomposition takes place, and an insoluble silicate of lime is precipitated in the pores of the stone, filling them up and thereby cementing together the particles of the stone.

STONEHAM, in Middlesex Co., Mass., on the Boston & Maine Railroad, 12 miles N. of Boston. It is extensively engaged in the manufacture of shoes and leather. Pop. 6000.

STORRS, RICHARD SALTEN, D.D., an American clergyman, born at Braintree, Mass., Aug. 21, 1821, graduated from Amherst College in 1839, and from Andover Seminary in 1845. In 1846 he became pastor of the Church of the Pilgrims (Congregational), Brooklyn, N. Y., where he still remains (1884). He is regarded as one of the most scholarly and eloquent men in the American ministry. Besides numerous sermons, he has published *The Graham Lectures on the Wisdom, Power, and Goodness of God, as Manifested in the Constitution of the Human Soul* (1856), and *Preaching without Notes* (1875).

STOUGHTON, a town of Norfolk Co., Mass., on the Old Colony Railroad, 19 miles from Boston, extensively engaged in the manufacture of boots and shoes. Pop. 4875.

STOW-ON-THE-WOLD, a market-town of Gloucestershire, England, 28 miles S.S.E. of Evesham by rail, has a 14th c. parish church, a Gothic town-hall, erected (1877) at a cost of £4000, and malting and brewing industries. Pop. (1881) 1636.

STRADIVA'RI or STRADUA'RI, a celebrated violin-maker, born at Cremona in 1644, was a pupil of Nicolo Amati, in whose employment he continued till 1700. Then he started for himself, and soon surpassed all his contemporaries in the excellence of his workmanship. Even yet he has no equal. His best instruments were made between 1700 and 1730, and now command from $1000 to $3000. S. died December 18, 1737. His sons Francesco and Omobono S., possessed not a little of their father's art.

STRAIN, in kinematics, is any definite alteration in the form or dimensions of a given portion of matter. When the stress which produces the S., or the stress which is called into action by the S., is taken into consideration, the question becomes one of dynamics. In solid bodies S. is always accompanied with internal stress, and this property of exerting stress when strained is called elasticity. Thus a coiled string, or a bent bow, is an example of a strained body, and the external force which each exerts is the resultant of the stresses produced in its elements by the S.

STREATOR, a city of La Salle Co., Ill., on the Vermillion River. It has four railroads, and is an important business center. It has large glass and bottle works and is surrounded by the Vermillion coal fields. Pop. 10,000.

STREET, ALFRED BILLINGS, an American poet, born at Poughkeepsie, N. Y., Dec. 18, 1811. He began to practice law in Monticello, N. Y., but in 1839 was made state librarian, and removed to Albany. This position he held for many years. Died 1881. He published in prose *The Council of Revision of the State of New York* (1859), *Woods and Waters, or the Saranacs and the Racket* (1860), *Digest of Taxation in the U. S.* (1863), and *The Indian Pass* (1869). In poetry he published *The Burning of Schenectady, and other Poems* (1842), *Drawings and Tintings* (1844), and *Frontenac* (1849).

STREPSIRHI'NA (Gr. 'twisted-nosed'), a division of Monkeys or *Quadrumana* having twisted or curved nostrils, and found chiefly in Madagascar. The Lemurs, Aye-Aye or *Cheiromys*,

Slow Lemurs, and Loris, belong to this group, which has also received the name *Prosimiæ*. From their brain-characters as well as from their *placentation*, the Lemurs especially are believed to occupy an intermediate position between carnivora and quadrumana.

STRESS is a convenient term introduced by Profesor Rankine to express the mutual action between any two portions of matter. Thus the pressure between a table and a book resting on it is of the nature of a S., which has two aspects, according as we fix our attention upon the table or the book. With reference to the former the pressure is *downwards*, with reference to the latter *upwards*, and these two forces, which according to Newton's third law, are equal and opposite, form, when regarded as a whole, the S. Similarly the attraction of the earth for the sun and the attraction of the sun for the earth are opposite aspects of the same S., and the same can be said of all forces which obey Newton's third law, *i. e.*, of all known forces which invariably exist in pairs.

STROGAN'OFF, a noble family of Russia, descended from ANIKA S., a rich Novgorod merchant of the beginning of the 16th c., who had large possessions in the Ural Mountains, established salt manufactories, and started the trade between Russia and Siberia. His three sons, YAKOFF, GRIGORIJ, and SEMEN S. founded towns and fortified villages ('Ostrogs') on the river Kama, with their own troops defended their possessions against robber neighbors, and built fortresses in Siberia to check Mongol incursions. Semen, the youngest, supported by a nephew and by Yermak Timofeyeff, Hetman of the Don Cossacks, attacked the Mongols and took the capital Sibir (1581), with all Siberia. The S. family received now a monopoly of trade with Siberia, as well as other privileges, and from manufactories, mines, foundries, and gold washing gained great wealth, but in 1722 Peter the Great deprived its then representatives, the three brothers, ALEXANDER, NICHOLAS, and SERGEI S., of all their privileges, only conferring instead of them the title of baron.—ALEXANDER S. (1734–1811), son of Sergei, imperial chamberlain and privy councilor, was married to a relative of the Empress Elizabeth. He was made a count of the German Empire in 1761, and a Russian count in 1798.—His son, COUNT PAUL S., fought as a general against the French, and distinguished himself in 1814 at the battle at Craonne, where his only son fell by his side. He died in 1817, leaving a daughter heiress of his estates.—GRIGORIJ S., grandson of Nicholas S. (1770–1858), was in 1821 Russian ambassador at Constantinople. He was made a count in 1826, and imperial chamberlain in 1846.—His eldest son, SERGEI S., was from 1835 to 1847 curator of Moscow University, and in 1857 was appointed to direct the archæological excavations in Russia, of which he has prepared a series of valuable reports. He is also noted for his earnestness in stimulating art and science, and promoting the internal progress of Russia.—His younger brother, ALEXANDER S., born 1805, was from 1839 to 1841 minister of the interior, and in 1855 became governor-general of New Russia, with the task of restoring order in the Crimea and rebuilding Sebastopol.—His son, GRIORIJ, imperial master of the horse, in 1856 formed a morganatic marriage with Maria, Archduchess of Leuchtenberg, eldest daughter of the Emperor Nicholas.

STRONG, JAMES, S.T.D., a distinguished American scholar, born in New York, Aug. 14, 1822, and graduated from Wesleyan University in 1844. In 1858 he was made professor of Biblical literature in Troy University, and in 1868 became professor of exegetical theology in Drew Seminary, Madison, N. J. He is a member of the American committee for the revision of the English Bible. He undertook, in connection with Rev. John McClintock, D.D., the preparation of a *Cyclopædia of Biblical, Theological, and Ecclesiastical Literature*, and upon the death of Dr. McClintock, in 1870, supervised the remainder of the work.

STROSSMAYER, JOSEPH GEORG, a Croatian bishop, was born at Essek in Slavonia, 4th February 1815, and studied in the Diakovo seminary, at the University of Pesth, and, after taking priest's orders (1838), in the Vienna Augustinum. As bishop (1849) of Diakovo (a diocese including Bosnia and Syrmia), he became the head of the Croatian party in the Vienna *Reichsrath* and by his statesmanlike strivings for autonomy incurred the dislike of the imperial government. In Western Europe, however, he is chiefly known as one of the chief opponents of the Infallibility Dogma in the Vatican Council (1870), being one of the 88 who voted 'No.' His speeches, there, made Dupanloup own him his master in oratory, but their liberal sentiments respecting Protestantism called forth the cry of 'Heretic!' He has passed three winters at Rome since the promulgation of the decree, but has been wisely left to his own beliefs, since his influence over his countrymen has been rendered boundless by a princely liberality, of which his latest instance was his sending $15,000 to the Slavonic sufferers in the Russo-Turkish war.

STUART, JAMES E. B., an American general, born in Virginia, in 1833, and graduated from West Point, in 1854. He served with distinction on the frontier against the Indians, and at the beginning of the civil war entered the Confederate service, where he was placed in command of a brigade of cavalry. He soon came to be recognized as the most brilliant cavalry officer in the Confederate service. He participated in many of the engagements of the war, and died at Richmond, Va., May 11, 1864, from the results of a wound received in battle.

STUKE'LEY, WILLIAM, M.D., F.R.S., an antiquary of considerable repute, was born at Holbeach, Lincolnshire, England, November 7, 1687. In 1703 he entered at Corpus Christi College, Cambridge, whence he graduated M.B. in 1709. After residing for a time at Boston, he betook himself to London in 1717, where he was admitted fellow of the College of Physicians. In 1726 he retired to Grantham, in his native county, where he acquired a good practice, which, however, he abandoned three years afterwards for the Church, being presented to the living of All Saints', Stamford. In 1747 the Duke of Montagne gave him the rectory of St. George the Martyr, Queen Square, where he died March 3, 1765. S., who was known among his friends as the 'Arch-Druid,' was a credulous and fanciful speculator.

STUY'VESANT, PETER, born in Holland in 1602, entered the Dutch service, and as director of the colony of Curaçoa lost a leg in the attack on the Portuguese island of St. Martin. Appointed director-general of the New Netherlands (1647), he concluded peace with the Indians, in 1650 settled the boundaries of the English and Dutch possession, and in 1655 annexed New Sweden on the Delaware. His refusal to admit the protest of a convention (1653) against the revival of obsolete statues had roused a widespread discontent; and when in 1664 an English fleet appeared before New Amsterdam demanding its surrender, he found himself abandoned by his subordinates, and on 3d September the town was given up to the English, who changed its name to New York. S. next year repaired to Holland to give an account of his conduct, but soon returned, and down to his death in August 1682 lived at his farm, the Bowery, on the site of the present Bowery Street.

SUGAR-MITE, a name given to the *Tyroglyphus sacchari*, a species of *Acarina* or Mite found in unrefined sugar. The body is oval-shaped, the mandibles scissor-like, and the feet have suckers. Dr. Hassall of London reported that in 69 out of 72 samples of unrefined sugar mites were discovered. Grocer's itch is caused by these creatures. Over 500 have been found in ten grains of sugar; one pound may thus contain 100,000 sugar-mites.

SU'KHUM KA'LE, a seaport and military station in Asiatic Russia in the government of Transcaucasia, is situated at the foot of the Caucasus on the E. shore of the Black Sea. In 1831 a commercial port was established here, which has, however, been much overshadowed by Poti, 48 miles S., but it is still a station on the line of the Black Sea Telegraph, and a shipping place of the Russian steamers. On May 14, 1877, S. K. was captured after bombardment by the Turkish ironclads, and played a somewhat important part during the subsequent conduct of the war as a Turkish base of operations. Pop. (1874) 1161.

SULL'IVAN, ARTHUR SEYMOUR, an English composer, was born in London in 1844, sang when a child in the chapel-royal, and was educated at the Royal Academy of Music. At the age of fourteen he gained the Mendelssohn scholarship, enabling him to pursue his studies under the best masters at home and abroad. He composed the incidental music for the *Tempest*, performed at the Crystal palace in 1862, and since that time his works have been many and varied.

Among the most important are the cantatas of *Kenilworth* and *The Bride of Neath Valley*, a symphony in E minor, and two oratorios, *The Prodigal Son*, and the *Light of the World*. He has also composed several bright and tuneful operettas, such as *Cox and Box*, *The Contrabandista*, *Trial by Jury*, and the successful two-act comic operas, *The Sorcered* and *H.M.S. Pinafore* (1878). In the last three works Mr. W. S. Gilbert was his literary coadjutor. In 1878 S. came to America to supervise the production of *Pinafore* in New York; since which he has composed, in connection with Mr. Gilbert, the *Pirates of Penzance*. Mr. Sullivan is one of the most popular song composers of the day. He conducted the English concerts at the Paris Exhibition, and the Promenade concerts at Covent Garden, in 1878.

SULTANPORE', the chief town of the district of the same name in Oude, British India, on the Gumti River, 92 miles S.E. of Lucknow, and 59 N. of Allahabad. Pop. (1869) 5708. It was formerly the capital of the Bhars, an aboriginal tribe expelled by the Mohammedans, but it is now decaying. The military cantonments lie on the opposite side of the river. During the mutiny of 1857, the sepoys rose and murdered their officers and the civil officials, but the women had been sent beforehand safe to Allahabad.

SUMBULPUR', the chief town of the district of the same name, Central Provinces, British India, on the left bank of the

Mahanuddi river, 340 miles E. of Nagpur; pop. (1872) 11,020. The town has lately been much improved. It contains several old temples.

SUMMERFIELD, JOHN, one of the pioneer Methodists of America, born at Preston, England, Jan. 31, 1798, and became a preacher in 1818. He came to America in 1821, where he made a marked impression by his eloquence, and added materially to the growth of the Methodist Church. Died in New York, June 13, 1825. His life was written by Rev. John Holland (1829) and by Rev. William M. Willet (1857).

SUMPTER, THOMAS, an American patriot, born in Virginia, 1734, and was a prominent opponent of British oppression during the period which immediately preceded the war of the Revolution. He rendered valuable military service during the war, and was a member of the convention which adopted the Federal Constitution. He was afterwards member of Congress, U. S. senator, and minister to Brazil. Died near Camden, S. C., June 1, 1832.

SUNDEEP, an island at the mouth of the Meghna, the principal mouth of the Brahmaputra, included within the district of Noakolly, Bengal, British India. Area, 420 sq. miles; pop. (1872) 87,016. It is of recent alluvial formation, and liable to be swept by floods. By the disastrous cyclone of 31st Oct. 1876 one-half the population is estimated to have perished either of drowning or subsequent cholera. The crops are rice and betel-nuts. In the 17th c. it was notorious as the home of Portuguese pirates, who devastated all the river coasts of Bengal; and up to a late period lawlessness has prevailed, owing to the difficulties of communication with the mainland.

SUP'PLE JACK, a name given to various strong twining and climbing shrubs of the Western hemisphere. The S. J. imported into Europe from the W. Indies for walking-sticks is the barked branches of one or more species of *Paullinia* of the natural order *Sapindaceæ*. From the tough and flexible quality of these branches they are commonly employed as riding-switches in Jamaica. In the United States, S. J. is applied to *Berchemia volubilis*, a rhamnaceous twiner which ascends the highest cypresses (*Taxodium distichum*) in the Dismal Swamp.

SURAJ'AH DOW'LAH, the last of the independent Nawabs of Bengal, and the instigator of the massacre of the Black Hole. In 1756 he succeeded his grandfather, Ali Verdy Khan, a man of great ability, to whom he had behaved as a second Absalom. S. D. began his reign by plundering his wealthy relations, and within two months after his accession marched against Calcutta on some slight pretext. His object was money; and the death of 125 English prisoners in the military dungeon of Fort William was, from his point of view, an unimportant accident. The arrival of Clive and Admiral Watson caused his retreat to Moorshedabad. Peace was at first concluded, but a conspiracy among the Nawab's officers led to the battle of Plassey. After his defeat, S. D. fled up the Ganges, but he was betrayed by a *fakir* whom he had previously wronged, brought back, and killed by order of the son of Meer Jaffier, the new Nawab installed by the British. He had not completed his twentieth year, and was only fifteen months on the throne.

SUR'FACE, in mathematics, is the boundary of a solid, and has two dimensions, length and breadth. It may be conceived to be generated by the motion of a straight or curved line, just as a curve is generated by the motion of a point. Of all surfaces, the most important are those of the second order, which are intersected by a straight line in at most two points, and whose curve of section by a plane is a curve of the second order. Hyperboloids, ellipsoids, paraboloids, spheres, cones, and cylinders, and also the limiting case of two planes, are included among the so-called quadric surfaces.

SURI, the chief town of the district of Beerbhum, Bengal, British India, 109 miles N.W. of Calcutta, and 3 miles S. of the More River, pop. (1872) 9001. It is healthily situated on a gravel ridge, but has no trade or manufacture.

SUR'PLICE FEES are ecclesiastical dues payable to the English clergy on marriages, churchings, christenings, and burials.

SURR'EY, HENRY HOWARD, EARL OF, an English poet, grandson of the victor at Flodden, was born about 1517. Of his earliest years nothing is known, but in 1526 he was cup-bearer to Henry VIII., whom he attended on his famous visit to Boulogne in 1532, when the interview took place between the English and French monarchs on the 'Field of the Cloth of Gold.' In 1533 he was present at the coronation of Anne Boleyn, and carried the 'fourth sword with the scabbard upright before the king.' There is no evidence that he was entered either at Cambridge or Oxford, but his poems show an exquisite renaissance culture, which he probably owed to the liberal associations of home. 'His father is said to have been a patron of men of letters; his mother was the friend and protector of Skelton, who celebrates her bounty in the *Crown of Laurel;* and amongst the close circle in whose society his boyhood was passed were such men as Lord Berners, the translator of Froissart, Vere, Earl of Oxford, Lord Stafford, Lord Morley, and others equally distinguished by their literary attainment.' In 1536 S. lost his dear friend and brother-in-law, the Duke of Richmond. To this period belongs the romantic but unhistorical episode in his career—his visit to Italy in the character of knight-errant to assert the peerless charms of his mistress Geraldine—a story which first appeared in Nash's *Unfortunate Traveler, or Life of Jack Wilton* (1594), and was first exploded by Dr. Nott in his elaborate edition of Wyatt and S. (1815). In 1535 S. was in fact married to the Lady Frances Vere, and his eldest son, Thomas, was born in the following year at the very time the poet is represented as tilting in the lists at Florence in honor of a paramour who was only seven years of age! In 1537 S. was a chief mourner at the funeral of Lady Jane Seymour; in 1540 he took part in the tourneys held at the marriage of Anne of Cleves, and in September 1541 he was appointed along with his father joint-steward of the university of Cambridge. In the wars with France (1544–46) S. was a commander and achieved some brilliant successes, but a disaster that happened to his troops at St. Etienne in January 1545–46 was made the occasion of his recall; the fierce hostility of the Hertford family (then highest in royal favor), encouraged by groundless rumors of S.'s 'designs upon the throne,' resulted in a charge of treason. The soldier-poet was condemned to death 13th January 1547, and on the 21st of the same month was beheaded at Tower Hill in the thirtieth year of his age.

SWALLOW-TAILED BUTTERFLY and MOTH, the name of the *Papilio Machaon*, a large and beautiful genus of butterflies, and of the *Durapteryx Sambucaria*, a common English moth. In both insects the hinder wings are prolonged to form pointed tails or projections, from which their popular names are derived. The larva of the S.-T. M. is of a reddish color, and is usually found on such trees as willows and elders.

SWAN'AGE CLAY, a thin deposit of Middle Purbeck age, very remarkable for the fossil remains of mammalia which it contains, about fifteen species having been described by Dr. Falconer and Professor Owen. Only about eight species besides have been obtained from the whole range of Secondary rocks. They appear for the most part to be referable to insectivorous marsupials.

SWIND'LING, a popular term used to denote fraudulent procedure—especially when the deception is gross and the rascality marked.

SWINTON, WILLIAM, an American writer, born at Edinburgh, Scotland, April 23, 1833, came to America when ten years old, and was educated at Amherst College. He became professor of belles lettres in the University of California. He has published—*Rambles Among Words* (1859), *Campaigns of the Army of the Potomac* (1864), *The Twelve Decisive Battles of the War* (1870), *History of the New York Seventh Regiment during the Rebellion* (1870), and *Word Analysis* (1872).

SYLVES'TER, JAMES JOSEPH, F.R.S., a distinguished mathematician, was born at London, England, September 3, 1814. He graduated second wrangler at Cambridge in 1837, but being a Jew, was disqualified from entering for the Smith's Prize. He was professor of natural philosophy in University College, London, till 1855, when he became professor of mathematics at the Royal Military Academy, Woolwich. In 1876 he was appointed to the mathematical chair at Johns Hopkins University, Baltimore, Md. His numerous valuable papers are of great originality; and to him and Cayley the development of the higher algebra is mainly due. His best work is the application of the chemical atomic theory as an illustration of the theory of invariants and covariants of binary quantics, published in the *American Journal of Mathematics* (parts I. and II. 1878).

SYN'CRETISM (Gr. *syn*, 'together,' and Lat. *cerno*, 'to perceive'), was a term first used by the Calvinist, David Pereus, in his work *Irenicon* (1614), in which he made an attempt to allay the spirit of dissension to which the Reformation had given rise. The Lutheran George Calixtus, however, took a more prominent part in the work of reconciling the separated parties, and gave rise to the so-called Syncretistic Controversy. The real aim of the teaching of Calixtus was to induce the three leading branches into which the Church was divided—the Roman Catholic, Reformed, and Lutheran—to abstain from their mutual hatred and enmity, and to cultivate mutual love and goodwill. His opponents supposed or represented it to be that he wished the three to unite and form one body. See Gass, *G. Calixt. und der Synkretismus* (Bresl. 1846).

SYNE'SIUS, the Philosopher, was born of Heracleid descent about 370 A.D., at Cyrene, a city of the Libyan Pentapolis. There he passed his boyhood, and after brief military service repaired to the famous Alexandrian schools, where he became Hypatia's favorite pupil. A visit to Athens ended in disappointment. 'Athens retaining nothing of splendor but a name that once was

famous;' he returned to Cyrene, and in 397 was sent on an embassy to Arcadius at Constantinople, his residence the next three years.

The extant oration, *Peri Basileias*, a bold discourse on a ruler's responsibilities, received the emperor's approbation, and won great privileges for the Pentapolis. At Constantinople he may have heard St. Chrysostom, and when in 403 he revisited Alexandria, the Patriarch Theophilus induced him formally to become a Christian neophyte, and marry a Christian wife. This marriage, and his still semi-pagan opinions, stood in the way of his accepting the bishopric of Ptolemais, to which he was elected in 409; but when Theophilus consecrated him a twelvemonth later, he seems to have renounced the married state. His episcopate, marked by the fearless excommunication of Andronicus, tyrannical governor of the Pentapolis, and by his steadfast opposition to the Arians, was short, since he died, according to Druon, in 413. The 'Squire Bishop'—as Kingsley styles S. from his love of field sports—became, like Tillotson, 'a father of the Church without having been her son;' and his works, those even after his conversion, retain the literary cult of Paganism. We have by him two homilies, ten hymns, 157 charming letters (394–413), some fantastic Neo-Platonic treatises, &c., but of the dramas mentioned by himself not one survives. The best complete edition is Morell's, with Petavius' Latin rendering (2d ed. Par. 1640), and there is an excellent French translation by H. Druon, with a biography prefixed (Par. 1878).

SYR'IAC LANGUAGE AND LITERATURE.—The Syriac language belongs to the Northern or Aramaic branch of the Semitic Languages. In the 1st c. A.D. it was developed by Christians into a written language, but from that time it was gradually supplanted by Arabic, and it now exists only in the corrupt dialects about the lakes Urmiah and Van, kept alive by the efforts of missionaries. The best grammar of this 'modern S.' is by Nöldeke (Leip. 1868). From the Syriac chirography, which, in its oldest form, the 'Estrangelo,' was once widely diffused in Asia Minor, were derived not only the Kufic Writing of the Arabs (from which the Arabic, Persian, and Turkish alphabets have sprung), and the Zend and Pehlevi writing of the Iranians of the time of the Sassanidæ, but also through the medium of the Nestorians, the chirography of the Ugrians, Mongols, Kalmuks, and Mantchus. The extant Syriac literature is almost exclusively Christian, composed after Greek models, and containing many words of Greek origin. Its oldest classic specimen is the Peshito. Its poetry wholly consisted of unrhymed hymns, of which the chief writers were Bardesanes and his son Harmonius. The golden age of Syriac literature dates from Jacobus, Bishop of Nisibis (died A.D. 350) to Ibas, Bishop of Edessa (died A.D. 470), the great schools of which two cities were, down to the middle ages, the centers of Syriac learning. The greatest writer of this period was Ephraem Syrus.

From the 4th c. Syriac literature is mainly translations of Greek philosophical and scientific works, which formed the basis of the Arabian writings of the 8th and 9th centuries, that through Spain carried Eastern learning to Western Christendom. From the 10th c. it declined, and in the 13th its last great writer was Bar-Hebræus. The chief collections of Syriac MSS. are in the Vatican, the Bibliothèque Nationale, the Bodleian, and the British Museum. The best Syriac grammars are by Uhlemann (2d ed. Berl. 1857); Hoffmann (2d ed. by Merx, 1867–70); the best Syriac chrestomathies (with vocabularies) by Bernstein and Kirsch (2 vols. Lond. 1867); Rödiger (2d ed. Halle 1868), and Martin (Par. 1875).

SYZYGY, in astronomy, occurs when the sun, moon and earth are in one line, so that when the moon is new or full it is said to be in S.

SZARVAS, a town of Hungary, on the Körös, a tributary of the Theiss, about 90 miles south-east of Pesth. It lies in the center of a swampy district. Bee-keeping is one of the principal industries of the inhabitants. Pop. (1870) 18,917.

T.

TABA·NUS, a genus of *Diptera* or flies, including the gad-flies, clegs, &c. The *T. borinus*, or large gad-fly, is a familiar species, which greatly irritates cattle. These flies abound in spring and summer. Their proboscis is esserted, and the antennæ are 3-jointed. In tropical countries the species of this genus attain their largest size.

TABOR COLLEGE, an educational institution, at Tabor, Fremont Co., Ia., incorporated in 1866, and controlled by the Congregationalists. It has two buildings, 234 acres of land, and a small endowment.

TAC'NA, in full, SAN PEDRO DE TAC'NA, a town of southern Peru, in a fertile valley, 2000 feet above the sea, has a considerable trade. A railway 39 miles long connects it with the port of Arica. Pop. 15,000.

TAIT, PETER GUTHRIE, a Scottish mathematician and physicist, was born at Dalkeith, April 28, 1831. He was educated at the Edinburgh Academy, and after studying for one session at the University of Edinburgh, proceeded to St. Peter's College, Cambridge, where he graduated as Senior Wrangler and First Smith's Prizeman in 1852, and was shortly after made a fellow of his college. In 1854 he became Professor of Mathematics at Queen's College, Belfast, and in 1860 was elected to the natural philosophy chair at Edinburgh.

His experimental investigations into the thermal conductivity of metal bars, and into the thermo-electric relations of metals through wide ranges of temperature, are published in the *Transactions* of the Royal Society of Edinburgh. He is best known, however, for his more purely mathematical researches, including many quarternion applications and an elaborate paper on *Knots*. In conjunction with Steele he has written *Dynamics of a Particle* (1856); is joint author with Sir W. Thomson of the first volume of a projected exhaustive *Treatise on Natural Philosophy* (1867); and with Shairp and Adams Reilly of *Life and Letters of Principal Forbes* (1873). His *Quaternions* (1867) is the best introduction to the subject, and his *Thermodynamics* (1868), and *Recent Advances* (1876) are models of two distinct scientific literary styles—the one designed for science students, the other for general readers. The *Unseen Universe* (1874) and its sequel, *The Parodoxical Philosophy* (1878), by Balfour Stewart and T., aim at proving, from consideration of the physical principle of 'Continuity,' that science and religion are not inconsistent with each other.

TAI-YUAN', a town of China, capital of Shan-si, on the Fuen-Ho, an affluent of the Hoangho, 250 miles S.W. of Pekin. For many years the residence of the emperors, it is noted for its magnificent mausoleums. The chief manufactures are sword-blades and knives. Pop. estimated at 300,000, has been greatly reduced by the famine of 1875–78.

TALBOT, SILAS, an American soldier, born in Rhode Island in 1750; entered the Colonial service at the outbreak of the Revolution; distinguished himself by his bravery at several engagements, particularly at Fort Mifflin; and rendered gallant services upon the sea, capturing the English vessels *The Lively*, *The King George*, and *The Dragon*. He was a member of the N. Y. legislature, and member of Congress in 1793. The latter portion of his life was spent in New York city, where he died June 30, 1818.

TALFOURD, SIR THOMAS NOON, born at Doxey, near Stafford, England, January 26, 1795, was educated by Dr. Valpy at Reading, studied law under Mr. Chitty, was called to the bar at the Middle Temple in 1821, and rapidly rose in his profession. He represented the borough of Reading from 1835 to 1841, and again from 1847 to 1849, and in the latter year was appointed justice in the Court of Common Pleas. While charging the grand jury at the Stafford assizes he was struck with apoplexy, and shortly after expired, March 13, 1854. T. was an eloquent, able, and laborious lawyer, but his fame rests mainly on his four tragedies—*Ion*, produced by Macready at Covent Garden in 1836; *The Athenian Captive* (1838); *Glencoe, or the Fate of the Macdonalds* (1840); and *The Castilian*, which never appeared on the stage. All these bear witness more or less to the author's deep and fervent study of the Greek drama on the one hand and the poems of Wordsworth on the other—*Ion* being perhaps the finest of the four.

TALLART, CAMILLE, COMTE DE, was born of an ancient Dauphiné family, 14th February 1652, and entering the army, rose rapidly, thanks to his natural talents and to his cousin, Marshal Villeroi. As early as 1674 he commanded a corps at Mülhausen, and having served under Turenne in Elsass, been

wounded at Rheinfelden, and raised to the rank of major-general (1688), he led an army over the frozen Rhine (1692), and mastered the Rheingau at a blow. As skillful a diplomatist as soldier, he helped to negotiate the Peace of Ryswyk (1697), and was employed by Louis to bring England over to the Partition Treaty. It failed to avert the War of the Spanish Succession, in which, under Bouffler, T. signalized himself at Kaiserswerth (1701) and Nymwegen (1702), capturing Trier, forcing Alt-Breisack to capitulate, and stripping the Prince of Hessen-Kassel of the Palatinate. Created Marshal (1703), and with Marsin despatched to command the French troops in Bavaria, T. lost against Marlborough and Prince Eugene the battle of Blenheim (1704), where with 15,000 of his men he fell into the hands of the English. During seven year's captivity in London he managed to secure the favor of Queen Anne, and largely contributed to the recall of his conqueror Marlborough; so when in 1711 he was released without either ransom or exchange, Louis XIV. welcomed him with the title of Duc d'Hostun. He became Minister of State (1726), and died May 30, 1728, leaving behind him the *Campagnes du Maréchal de T.* (Amst. 1762).

TALL'IS, THOMAS, the father of English cathedral music, was born about 1529. During the reigns of Henry VIII. and Queen Mary, he was a gentleman of the chapel-royal, a position more important than his salary of 7½*d.* a day might indicate. On the accession of Queen Elizabeth T. seems to have embraced the Reformed faith and to have become organist of the chapel. He published in 1575, in connection with Byrd, *Cantiones Sacræ*, a collection of anthems and hymns, which was protected for twenty-one years by the first patent of the kind ever issued. He set to music the portion of the English liturgy which is now sung, including the morning, evening, and communion service, and the litany and responses. His style was learned, grave, and devout, and he may be considered altogether the greatest English composer before the days of Henry Purcell. That he was a master of counterpoint is proved by his extraordinary *Song of Forty Parts* (8 separate trebles, 8 mezzo-sopranos, 8 counter-tenors, 8 tenors, and 8 basses), which, abounding with subjects of fugue and imitation, extends to 138 bars in *allabreve* time. There are extant his *Order of Daily Service* (edited by Bishop, 1843, and by Rimbault, 1847), *Full Cathedral Service* (edited by Rimbault, 1847), and *Order for Morning Prayer, with the Litany Noted* (new ed. 1854). T. died November 23, 1585, and was buried in the old parish church of Greenwich.

TALLMADGE, BENJAMIN, an American patriot, born on Long Island, in 1754; entered the Colonial service at the beginning of the war for independence; and rendered valuable service, by his brilliant and daring capture of a company of 500 tories at Lloyd's Neck, and the capture of Fort George at Oyster Bay. He served under Washington in several of the principal engagements of the war, was a member of congress (1801–17), and died in Connecticut, March 7, 1835.

TALMAGE, THOMAS DE WITT, D.D., a prominent American clergyman of the Presbyterian Church, born at Boundbrook, N. J., Jan. 7, 1832, graduated from New York University in 1853, and from the seminary of the Reformed (Dutch) Church in 1856. He became pastor of the Reformed church of Belleville, N. J., in 1856; removed to Syracuse, N. Y., in 1859; removed to Philadelphia, Pa., in 1862; and became pastor of a Presbyterian church in Brooklyn in 1870. By his eloquence he has drawn about him a large congregation, his church now having the largest membership of any of his denomination in America. The edifice in which he preaches, known as the Brooklyn Tabernacle, seats 4000 people. His sermons are noted for their evangelical sentiment, and are printed every week by papers both in America and England. He has published *The Almond Tree, Crumbs Swept Up, Abominations of Modern Society, Around the Tea Table, Old Wells Dug Out, Sports that Kill*, and *Every Day Religion*.

TÁLÚK', properly TAALLU'QAH, an Arabic word implying dependence, used through India for a species of land-tenure. In Bengal Proper the T. is an estate subordinate to the *zemindary* or estate in chief; one class pays its revenue direct to Government, the other only through the *zemindar*. In the N. W. Provinces the term is applied to an estate divided between several proprietors, superior and inferior, of whom the latter pay revenue through the former. In Oude the term is used of the great landholders, some of whom have the title of Rajah or Maharajah, and immense incomes. In Madras, a T. is merely a large revenue division. The holder of a T. is called a *talukdar*. See Wilson's *Glossary of Indian Terms* (1851).

TAMAQUA, a town of Schuylkill Co., Pa., on the Tamaqua River and the Philadelphia & Reading Railroad. Coal is found in the vicinity, and some manufacturing is carried on. Pop. 5730.

TAM'MANY SOCIETY, an association organized in the City of New York, May 12, 1789. It took its name from a chief of the Delaware Indians, named Tammany. Branch societies were organized in Philadelphia and other cities, and the objects of the order were of a charitable and benevolent character. These organizations, however, soon died out, with the exception of the New York society, which was converted into a political institution. It was as the leader of the Tammany Society that William M. Tweed gained an ascendency in the Democratic party, which made him dominant not only in the City of New York, but also in the State, and which enabled him to conduct a most gigantic system of frands in the government of the City of New York, for the enrichment of himself and his political associates. After the overthrow of Tweed, the society was reorganized, and it is still a strong political power, under the leadership of John Kelly. The building of the Society is located on Fourteenth Street, in New York.

TANDAH, a town in the district of Fyzabad, Oude, British India, 3 miles from the left bank of the Ghogra River, 60 miles S.W. of Lucknow. It is the seat of the largest weaving colony in the province, who manufacture both coarse cloth and fine muslin. Pop. (1869) 13,543.

TANEY, ROGER BROOKE, LL.D., a distinguished American jurist, born in Calvert Co., Md., March 17, 1777, and graduated from Dickinson College in 1795. In 1799 he began to practice law in his native county, and rapidly rose to prominence in that profession. After filling various political positions, he was, in 1835, made Chief-justice of the United States, which position he held until the time of his death. Mr. Taney was an able jurist, but his prejudices were strongly in favor of the South, and he made himself very unpopular at the North by his decision in the Dread Scott Case, and by a decision, made in 1861, where he held that President Lincoln had no authority to suspend the writ of *habeas corpus*. Died at Washington, Oct. 12, 1864.

TANN, LUDWIG, FREIHERR VON, a general in the Bavarian army, was born at Darmstadt, June 18, 1815, and entered the Bavarian service as lieutenant in 1833. In 1840 he became first-lieutenant of the staff, and in 1844 of the adjutant to the Crown Prince Maximilian, whom he accompanied on his travels in Greece. In 1848 he led a troop of volunteers in the revolt of Slesvig-Holstein against Denmark, and distinguished himself at Hoptrupp and at Düppel. Shortly before the conclusion of the war he returned to Bavaria, where he became successively colonel in 1850, major-general in 1855, general adjutant of the king in 1859, and in 1860 lieutenant-general and commander of a division. In the war of 1866 he acted as chief of the staff of Field-Marshal Prince Karl, and in 1869 became general of infantry with the command of the First Bavarian army corps, which took a distinguished part in the battles of Wörth, Beaumont, Sedan, and Orleans. He was, however, forced to retreat from Orleans, and received on the 9th November a severe defeat from General Aurelle, losing 10,000 prisoners and two guns, and being driven back to Artenay. The arrival of reinforements under the Grand Duke of Mecklenburg enabled the German army to recover their position, and T. earned fresh glory for himself at Baroches-les-Hautes, Orleans, and Beaugency. After the war he resided at Munich as general-commandant of the first army corps.

TANN'AH, the chief town of the district of the same name, in the Bombay Presidency, British India, 24 miles N. E. of Bombay by rail; pop. (1872) 14,299. The first railway in India was opened from Bombay to T. in 1853.

TANN'ER, THOMAS, born at Market-Lavington, Wiltshire, England, 25th Jan. 1674, after studying at Queen's College, Oxford, obtained an All Souls' fellowship. He became rector of Thorpe in Norfolk (1701), canon of Ely (1713), archdeacon of Norfolk (1721), canon of Christ Church (1724), and Bishop of St. Asaph (1732), dying at Oxford, 14th Dec. 1735.

TÁNTIA TÓPÍ ('the weaver who became an artilleryman'), the most energetic of the rebel ringleaders during the Sepoy Mutiny of 1857. He commenced as a lieutenant of Nana Sahib, of whom he is said to have been a relation; but after the latter had fled into Nepaul, he continued the war for several months, retreating with great rapidity through Bundelcund and Central India, but was finally captured, tried, and hanged in April 1859. T. T. was the last armed rebel in the field.

TAPPAN, ARTHUR, an American philanthropist, born at Northampton, Mass., May 22, 1786, and during most of his life was engaged in mercantile pursuits, first in Montreal, Canada, and after 1812 in New York. He was one of the organizers of the American Tract Society, and gave largely for religious and charitable purposes. He was for some time connected with the American Anti-Slavery Society, to which he was a liberal contributor, but withdrew from it, when disunion was favored as a remedy for slavery. Died at New Haven, Conn., July 23, 1865.

TAPPAN, HENRY PHILIP, D.D., an American divine, born at Rhinebeck, N. Y., April 23, 1805; educated at Union College (1825) and Auburn Theological Seminary; was pastor of churches in Schenectady, N. Y. (Reformed), and Pittsfield, Mass. (Congre-

gational); became professor of moral philosophy in the University of New York (1832), and chancellor of Michigan University (1852), which position he resigned in 1863. He is the author of several philosophical and theological works.

TAS'MAN, ABEL JANSSEN, a celebrated Dutch navigator, was born probably at Hoorn, about 1600. Commissioned by Van Diemen, the governor of the Dutch Indies, to explore the S. coast of the Australian continent, he left Batavia with two ships, August 14, 1642, passed Mauritius October 8, and on November 24 discovered a coast which he called Van Diemen's Land, but which is now known as Tasmania. He sailed along its S. and E. coasts without being aware of its insular character, and proceeding further E. discovered (December 13) the southern island of New Zealand (January 6), the Fiji Islands, returning to Batavia, June 15, 1643. His account of this voyage was reprinted at Amsterdam in 1722. On the 29th January 1644 he set out on a second voyage to explore the coasts of New Guinea and Australia, from which he never returned.

TASSO'NI, ALESSANDRO, an Italian poet, born at Modena in 1565, studied law at Bologna and Ferrara, became secretary of Cardinal Colonna in 1597, and accompanied him to Spain in 1600. In 1612 he entered the service of Carlo Emanuele of Savoy, for whom he had a high regard, but he was soon forced by the intrigues of his political enemies to give up his position. In 1626 he obtained the office of secretary to Cardinal Lodovisio, and after the Cardinal's death he was appointed in 1632 chamberlain to Francis I of Modena. By his hostile *Considerazioni sopra le Rime del Petrarca* (Modena 1609) he acquired the name of *Petrarchomastix;* in his *Pensieri Diversi* (Rome 1612) he made a similar attack on Homer and Aristotle, and maintained that in everything—in literature as well as in science—the moderns had the pre-eminence; and in the *Secchia Rapita* (Paris 1622), a mock-heroic poem ostensibly describing the contest that arose from the rape of a Bolognese bucket by the people of Modena, he treats everything ancient as old-fashioned, and indulges in hilarious but cynical mockery of the general round of human life. His patriotism was severely wounded by the encroachments of the Spanish power, and in his *Filippiche* (Lat. ed. 1878), and his *Manifesto* (Flor. 1855), he laments the decay of Italian independence. T. died at Modena in 1635. The *Secchia Rapita* is his most popular work; it is regularly reprinted from time to time. A collection of his letters by Gamba appeared at Venice (1827).

TATT'IES (from a Sanscrit word *tat*, 'canvas'), the screen of matted grasswork which is placed before the open doors and windows in most parts of India during the season of the hot winds, and constantly wetted with water to cool the air by evaporation.

TAVI'RA, a seaport in the S. of Portugal, province of Algarve, on both banks of the Rio Sequa, about equi-distant (20 miles) from Faro on the W. and the Guadina on the E. It has a Moorish castle, two collegiate churches, a richly-endowed hospital, and good sardine and tunny fisheries. Pop. 9000.

TAY'LOR, JOHN, styled by himself 'The King's Majesty's Water-Poet,' was born in Gloucester, England, about 1580. After serving in sixteen voyages, having been with Essex at Cadiz and the Azores, he began to ply as a waterman on the Thames, at the same time keeping a public-house, and soon became known as a humorist and a writer of doggeral verses which he hawked about for sale. The most memorable incident in his life, however, was his traveling on foot from London to Edinburgh, 'not carrying any money to or fro, neither begging, borrowing, or asking meat, drink, or lodging.' He set out on the 14th July 1618, and reached Edinburgh on the 13th of August. This journey was believed by Ben Jonson to have been undertaken 'in malice or mockage' of him on account of his similar journey shortly before; yet, meeting him at Leith, Ben presented T. with 'a piece of gold of two-and-twenty shillings to drink his health in England.' In 1630 T. published *All the Works of J. T., being Sixty and Three in Number*, but before his death in 1654 he had produced 138 separate publications.

TAY'LOR, JOHN, D.D., born in Lancashire, England, in 1694, was educated at Whitehaven, and obtained his degree from a Scotch university. He acted as pastor for many years to a Norwich Unitarian congregation, but 1757 became tutor in the academy of Warrington, where he died, March 5, 1761.

TAY'LOR, MEADOWS, an Anglo-Indian author and administrator, was born at Liverpool, England, 25th September 1808, and exchanged the drudgery of a merchant's office for a situation in a so-called merchantile house in Bombay, where he was rescued from becoming 'Baxter's shopboy' through the kindness of a relative, Mr. Newnham, then chief secretary to the local government, who procured him a commission in the Nizam's army. In Hyderabad he set himself to earnest study of the languages, and was for four years (1826–30) in charge of a large district of the Nizam's dominions. After a visit to England (1838–40) he was placed in charge of Shorapore, a small state tributary to the Nizam, and here, as in the district of Nuldroog, to which he was transferred in 1850, he labored with a zeal, wisdom, and benevolence which made him 'a ministering angel to a population whose last refuge from unbearable tyranny was a migration into British territory.' In the crisis of the Mutiny he was sent to preserve order in Berar, and in 1860 was driven home by failing health. He had risen to the rank of colonel, and was selected by the Queen herself for a Companionship of the Star of India. After a brief visit in 1875 to the scene of his early labors, he died at Mentone, May 13, 1876.

TAY'LOR, NATHANIAL WILLIAM, D.D., an American divine, born at New Milford, Conn., June 23, 1786; educated at Yale College (1807); entered the ministry in 1812; and became professor of didactic theology in Yale seminary in 1822, which position he held until the time of his death, March 10, 1858. He published, besides sermons, *Lectures on the Moral Government of God* and a volume of lectures and essays.

TAY'LOR, THOMAS, 'the Platonist,' was born in London, England, 15th May 1758, and destined for the Dissenting ministry, received three years' schooling at Paul's. Poverty forced him to accept a clerkship at Lubbock's Bank, but all his leisure he gave up to study, and published in 1787 the *Hymns of Orpheus*, first of a series of classical, and mainly philosophical, translations. Besides occasional papers, he issued in the years 1780–1834 no fewer than 37 different works, in 63 volumes (one-third of them large quartos). Some, published by patrons, belong by their history to the curiosities or amenities of literature; others, for which he was paid by booksellers, to its calamities. Thus his *Pausanias* (3 vols. 1794) brought him but £18; *Plato* (5 vols. 1804) lay for forty-four years entombed at Arundel Castle; whilst *Aristotle* (9 vols. 1812), whose edition was limited to fifty copies, gained him a pension of £100 from Mr. Meredith, a retired tradesman. This T. enjoyed down to his death at Walworth, his residence for forty years, 1st November 1835.

TAY'LOR, TOM, journalist and dramatist, was born at Sunderland, England, in 1817. He was educated at Glasgow University, and at Trinity College, Cambridge, where he gained a Fellowship, and took the third place in the Classical Tripos of 1840. In 1845 he was called to the bar at the Inner Temple, and began to go the Northern Circuit, but soon relinquished the legal profession, and become a leader-writer for the *Morning Chronicle* and *Daily News*, at the same time doing much work as a dramatist. T. was one of the earliest contributors to *Punch*. T. has written over 100 dramatic pieces, nine-tenths of which, he himself declares, are perfectly original. Died in 1880.

TAY'LOR, WILLIAM, 'of Norwich,' born in that city in 1765, was educated at Palgrave by Mrs. Barbauld's husband, and in 1779 entered his father's counting-house. Two visits to the Continent made him familiar with French, Italian, and German, and commerce he soon exchanged for an assidnous study of the last-named literature, which he had the honor of introducing to his countrymen. Translating, at first an amusement, was rendered a necessity by mercantile losses, and during his later years T. was a voluminous contributor to the *Monthly Review*. Died at Norwich, in March 1836.

TCHERKA'SI, a town in the government of Kiev, Russia, on the Dnieper, 110 miles S.E. of Kiev. It has 6 Russian, 1 Protestant, and 1 Roman Catholic, churches, a synagogue; manufactures beet-root sugar, and trades with France and Germany in wool, linen, spirits, cereals, and cattle. Pop. (1875) 13,914.

TECUMSEH, or TECUMTHA, an American Indian chief of the Shawnee tribe, born in Ohio, about 1770. He participated in several battles between the settlers and his tribe, and in 1805 attempted to organize a great Indian confederacy for the purpose of resisting the whites. He collected a considerable force, but was defeated by Gen. Harrison at the battle of Tippecanoe, Nov. 7, 1811. In the war of 1812 he served with the English, to whom he rendered valuable assistance, and by whom he was made brigadier-general. He was killed in battle, Oct. 5, 1813. His life has been written by Benjamin Drake (1841).

TEESTA (*Tista*), a large river of N. Bengal, India, which rises in the Thibetan Himalayas, and after breaking through Sikkim in a fine gorge flows S.E. into the Brahmaputra after a total course of 313 miles. It used formerly to flow S.W. into the Ganges, but the main stream was diverted by a great flood in 1785. The T. has a large traffic in rice, jute and tobacco.

TEJUCIGAL'PA, a town of Honduras, Central America, on the Rio Grande, 40 miles S.E. of Comayagua, is the capital of a department of the same name, and contains a university and cathedral. Though it has decayed considerably, owing partly to the emigration of some of the Spanish families, and partly to the exhaustion of the gold and silver mines, it is still an important city. Pop. 12,000.

TEL-EL-KEBIR (the 'Great Mound'), situated on the border of the Egyptian desert, 80 miles from Ismailia, was strongly forti-

fied by Arabi Pasha to check the advance of the British under Sir Garnet Wolseley. By a midnight march (September 12, 1882) the British general here surprised, and within two hours utterly routed the Egyptians, and so finished the campaign.

TELEOS'TEI, a well-known order of fishes, including all familiar food-fishes, and such generally as have a well-developed bony skeleton. The T. include the Malacopteri, Anacanthini, Acanthopterygii, Lophobranchii, Plectognathi. *Fossil T.* are first found in the Cretaceous rocks, and exist in their maximum development in the oceans of to-day.

TELL'ICHERRY, a town in the district of Malabar, Madras Presidency, British India, 325 miles E.S.E. of Madras, and 64 N. from the railway terminus at Beypore. An English factory was established here as early as 1708. T. is celebrated for an unsuccessful siege (1779–82) by the troops of Hyer Ali. It is now an active seaport, chiefly for the export of coffee, sandalwood, and cardamoms from the Wynaud, and the import of rice. Pop. (1871) 20,504.

TEM'PLE, Frederick, born in England, 30th November 1821, from Tiverton grammar-school gained a Balliol scholarship, and having taken a double first (1842), was elected fellow and mathematical tutor. Ordained in 1846, he became principal of the Training College at Kneller Hall near Twickenham (1848–55), and head master of Rugby (1858–69). A liberal in politics, a 'Broad Churchman' in theology, T. wrote one of the famous *Essays and Reviews* (1860), that on the 'Education of the World,' and his appointment to the see of Exeter in 1869 was met by strong though unavailing opposition. He has published *Sermons Preached in Rugby Chapel* (1858–60; new ed. Lond. 1867).

TENN'ENT, Sir James Emerson, son of William Emerson, a rich Belfast merchant, was born at Belfast, Ireland, 7th April 1794, graduated B.A. at Trinity College, and traveled through Europe and the Levant (1824–25). In Greece he met Byron, whom he emulated in enthusiasm for the Hellenic liberation. He wrote *A Picture of Greece* (1826); *Letters from the Ægean* (2 vols. 1829), and a *History of Modern Greece* (2 vols. 1830). In 1831 he was called to the bar, but never practised, as in the same year he married the daughter and heiress of Mr. W. Tennent, a rich Belfast banker, whose name and arms he assumed. Returned to Parliament by Belfast in 1832, he at first supported Lord Grey, but withdrawing from the Whigs with Lord Stanley and Sir James Graham in the Derby 'dilly,' he ever after followed Peel as a Liberal-Conservative. He was secretary to the Indian Board, 1841–45, to the Colonial Government of Ceylon, 1845–50, to the Poor-Law Board, 1852, and to the Board of Trade, 1852–67. On his retirement from official life in 1867 he was rewarded with a baronetcy. He died in London, 6th March 1869.

TEN'TACLES, the name given to the tactile appendages common in lower animals (*e. g.*, sea-anemones, corals, zoophytes, &c.), and which subserve prehension and touch, or both of these.

TERAI' or TURRYE', the name for the narrow strip of swampy jungle which uniformly underlies the lowest ridge of the Himalaya Mountains in the N. of India, continuously from Kumaon to Assam. This is about 15 miles wide, and is kept perpetually moist by rivulets, and by infiltration from a peculiar bed of boulders and sand, called *bahbar*, which immediately adjoins it above. It is overgrown with jungle and enormous grasses, the home of tigers and other wild beasts. At no time can it be healthy, and at certain seasons of the year the malaria is absolutely fatal to strangers, though the aboriginal tribe of Therus seem to flourish. Proceeding from the W., the first portion lies in the Rohilcund division of the N.W. Provinces, forming the *district* of T., with an area of 920 sq. miles, and a pop. (1872) of 185,658; the chief town is Kashipur. The next portion, bordering Oudh and Behar, lies chiefly within Nepaul territory. The third piece was annexed from Bhotan after the war of 1864, and is known as the E. and W. Duars.

TERHUNE, Mary Virginia Hawes, an American authoress, born in Amelia Co., V., about 1835, and in 1856 married Rev. Edward Payson Terhune, D.D. She is best known by her *nom de plume*, 'Marion Harland.' She began to write early in life, and has published *Alone* (1854), *The Hidden Path* (1855), *Moss Side* (1857), *Miriam* (1860), *Nemesis* (1860), *Husks* (1863), *Husbands and Homes* (1865), *Sunnybank* (1866), and others. She now (1885) resides in Brooklyn, where her husband is pastor of a prominent Reformed church.

TERRY, Alfred Howe, an American general, born at Hartford, Conn., Nov. 1827; entered upon the practice of law; volunteered at the outbreak of the civil war; was present at first Bull Run and the capture of Port Royal; and led the expedition which captured Fort Fisher, in 1865. By his gallantry he rose from the rank of colonel to that of major-general.

TESS'ELATED PAVE'MENT, a mosaic pavement composed of colored Tesseræ arranged to form a regular pattern or a picture. T. P. was made by the ancients. Many examples of Roman workmanship have been brought to light in England and other localities. Theatrical and battle scenes exquisitely executed with colored stones have been discovered at Pompeii.

TEUTON'IC LAN'GUAGES, a subdivision of the great Indo-European or Aryan family of languages. The name Teutonic is derived from the Teutones, after whose conquest by Marius it came to be applied to all German-speaking people. Its origin is found in the Old High German *diot*, 'people,' *duit-isc*, 'national,' the Old Eng. *theod* and *theodisc* (comp. Umbrian Lat. *tuticus*, from *tuta*, 'city'), of which the words *Deut-sch* and *Dutch* are modern forms. The T. L. are divided into three groups—(1) the Scandinavian; (2) the Low German; (3) the High German. The Low German embraces Gothic, the most primitive known Teutonic language, Platt-Deutsch, Frisian, Dutch, Flemish, Old Saxon—spoken between the Rhine and Elbe, a specimen of which is extant in the *Heljand* (Old Eng. *Heiland*), '*Healer*' or 'Saviour,' a work of the 9th c.—and English. See Jacob Grimm, *Deutsche Grammatik* (Gött. 1819–40); Max Müller's *Lectures* (1861–64); Schleicher *Compendium der Vergleichenden Grammatik der Indo-German-Sprachen* (Weim. 1866); Helfenstein, *Comparative Grammar of the T. L.* (1870).

THACHER, Peter, D.D., an American clergyman, born at Milton, Mass., March 21, 1752; educated at Harvard College (1769); was pastor of churches in Malden, Mass (1770–85) and Boston, Mass. (1785–1802); and attained great reputation as a pulpit orator. Died at Savannah, Ga., Dec. 16, 1802.

THALAMIFLO'RÆ, a subdivision of dicotyledonous plants, including all those orders in which the majority of genera have distinct petals, inserted with the stamens on the receptacle under or around the ovary.

THALASSICOLL'IDA, a group of *Protozoa* belonging to the order *Radiolaria*, and closely allied to Foraminifera and other *Rhizopoda*. They have structureless cysts, and give off processes resembling rays, and which may unite so as to form a network. The T. exist as simple or compound organisms.

THAL'ER, a German coin worth about three shillings of English money. It is going out of use.

THANKSGIVING DAY. In the year 1621, Gov. Bradford of the colony of Plymouth, appointed a special day of praise and thanksgiving to Almighty God, for the blessings of his providential care. The custom thus early inaugurated by the Pilgrim fathers, has been observed down to the present day, and has gradually grown to be a national institution, although at first observed only in the New England states. The day is annually appointed by the President, and is usually the fourth Thursday in the month of November.

THATCHER, Henry Knox, an American naval officer, born at Thomaston, Me., in 1806; entered the navy in 1823, and in 1862 had risen to the rank of commander; participated in the attack upon Fort Fisher and the siege of Mobile; was made rear-admiral (1868), retired from the service in 1868, and died in 1880.

THECODON'TIA, an order of extinct *Reptilia*, regarded by Owen as crocodilian in character, but by Huxley and others as resembling the *Deinosauria* more closely than Crocodilia. Owen defines Thecodont reptiles as having biconcave vertebræ, with the ribs of the trunk long and bent, the front ribs having a divided head. The sacrum consists of three vertebræ, and the femur or thigh has a third trochanter. The limbs are adapted for walking. The teeth have compressed crowns, are pointed with serrated margins, and arise from distinct *alveoli* or sockets. The T. belong to the Triassic age. *Belodon*, *Palæosaurus*, and *Thecodontosauras* are three notable genera.

THEL'WALL, John, born in London, England, 27th July 1764, after a brief apprenticeship to a tailor, studied law, but refusing from conscientious scruples to be called to the bar, entered on a literary career (1785). His *Poems on Several Occasions* (1787) were followed by *Poems written in the Tower and Newgate*, whither his bold harangues in favor of the French Revolution brought him in 1794. With Horne Tooke and Hardy he was tried for high treason but acquitted, after which he became a public lecturer on politics, and in 1801 on elocution, and as such distinguishing himself by his treatment of stammering. He published several works upon this and kindred subjects, and died at Bath, 17th February 1834.

THENARD, Louis Jacques, a French chemist, was born at La Louptière (Aube), 4th May 1777; studied chemistry at Paris under Banquelin, was appointed (1810) Professor at the Collége de France, and later at the Polytechnic School and in the philosophical faculty of the University; in 1825 was created Baron, and in 1852 peer of France. In 1837 T. resigned his professorship at the Polytechnic School, and in 1840 that at the University. In 1842, however, he became grand officer of the legion of honor,

and in 1850 member of the Council of Public Instruction. He died at Paris, June 21, 1857.

THEODO'TION, a native of Sinope or Ephesus, is the author of a Greek version of the Old Testament. He flourished in the latter half of the 2d c.; was first a disciple of Tatian, then a Marcionite, and finally an Ebionite. His version is simply that of the Septuagint disfigured and accommodated to his Ebionitish opinions. Singular to say, in spite of its heretical origin, it was not rejected by the Church, and was even in some parts, *e. g.*, the Book of Daniel, a special favorite.

THI'BAUDEAU, ANTOINE CLAIRE, COMTE, a French statesman, was born at Poictiers, 23d March 1765, and became an advocate in 1789. He took some part in the Revolution, but was not a fanatical Republican. Named by Bonaparte a member of the Council of State, he helped to draw up the Code Napoléon, was made Prefect of the department of Bouches-du-Rhone (23d April 1803), and a Count in 1809. In 1815, though he had disapproved the return of Napoleon, he yet opposed the recall of the Bourbons, and was banished. He traveled about Switzerland, Germany, &c., till 1830, when he returned to Paris, but lived in retirement till Louis Napoleon's *coup d'état*, after which he was named in the first list of members of senate, and was created a grand officer in the Legion of Honor, 11th August 1853. He died 8th March, 1854.

THIERSCH, FRIEDRICH WILHELM, a German scholar, born at Kirchscheidungen, near Freiburg-an-der-Unstrut, June 17, 1784, studied theology and philology at Leipzig and Göttingen, and in 1809, following a call to the newly-founded Munich Lyceum, there founded a Philological Institute. The enthusiasm T. had shown in the German War of Liberation he presently directed to Hellenic regeneration, and in 1831 visited Greece, where on the murder of Capo d'Istria he co-operated towards the election of Otto of Bavaria to the throne. Returning to Munich, he was elected President of the Academy in 1848, and died February 25, 1860.

THI'ONVILLE (Ger. *Diedenhofen*), a small fortified town of Germany, in Lothringen, on the Moselle, 18 miles N. of Metz by rail. It was taken by the Germans after a bombardment of two days, November 24, 1870. Pop. (1875) 7168.

THIRL'WALL, CONNOP, born at Stepney, England, 11th January 1797, at three learnt Latin, at four 'read Greek with ease and fluency,' and in 1809 figured as author of *Primitiæ*, a volume of sermons, tales, and verse. Charterhouse strengthened his precocious growth, and as scholar with Whewell, Sedgwick, and Julius Hare of Trinity College, Cambridge, he carried off the Craven, Bell, and senior chancellor's medal, and having graduated as a senior optime—there was then no classical tripos—was elected to a college fellowship (1819). His translation of Schleiermacher's *St. Luke*, introducing 'rationalism' to English theology, was made while he was a law student at the Temple, and he was actually called to the bar in 1825, the year when we find him one of a debating society whose members included Mill, Maurice, Macaulay, Sterling, the Bulwers, and Wilberforce. A Trinity tutorship, however, led to his taking orders and return to Cambridge, where with Hare he translated Niebuhr's *History of Rome* (1828), and became a joint-editor of the *Philological Museum* (1832–33), to it contributing among other essays on the widest subjects one, singularly subtle and profound, on *The Irony of Sophocles*. His *History of Greece* (1835–40; new and enlarged, ed. 1856) was written under great disadvantages for 'Lardner's Cyclopædia,' and has been partly eclipsed by Grote's, but was the first Greek history that, rising above the school-book level, betrays no trace of party animus, whilst from its learning, accuracy, and dignified if passionless style, it must always rank as an English classic. His pamphlet on the *Admission of Dissenters to Academical Degrees* (1834) cost him his tutorship, but was rewarded by the Whig Government with the living of Kirkby-Underdale, and in 1840 Lord Melbourne raised him to the see of St. David's. In six months' time he could preach to Welshmen in the Cymric tongue, out of his revenues he expended in thirty years £30,000 on the augmentation of poor livings, and a long list might be formed of churches and schools built or enlarged through his munificence. But T. is chiefly known to the outside world by his public utterances, the eleven Charges (1842–72), which, whether on Tractarianism or the Gorham controversy, Ritualism or *Essays and Reviews*, were always marked by a judicial fairness and that rarest quality of common-sense. The Liberal representative of the Bishops' bench, he stood alone or almost so in his attitude towards the removal of Jewish disabilities, the Maynooth Grant, Colenso's inhibition, and Irish Church disestablishment, while in Convocation he held the balance of opinion. Having resigned his see in 1874, he died at Bath, 27th July 1875, and was buried in Westminster Abbey.

THOM, JAMES, a self-taught sculptor, was born at Ayrshire, England, in 1799. While still an obscure stone-cutter, he suddenly became famous by a group representing 'Tam o' Shanter and Souter Johnny,' and cut in the common sandstone on which he was accustomed to work. It is a miracle of dramatic vigor and artistic skill. This group, which now adorns the 'Burns Monument' at Doon, near Ayr, was first exhibited in Edinburgh in November 1828. Orders flowed in on the gifted sculptor, who removed to London, whence in 1837 he came to the United States, where he settled, and where his genius found a liberal recognition. T. died of consumption at New York, 17th April 1850.

THOMAS, GEORGE HENRY, a distinguished American general, born in Virginia, July 31, 1816. In 1836 he became a cadet at the Military Academy, at West Point, graduated there in 1840, after which he served in Florida against the Indians, in the war against Mexico, and for five years in Texas. In November 1860 he returned to the East, and on the outbreak of the Civil War immediately placed his sword at the service of the Federal Government. He commanded a brigade at the battles of Martinsburg (July 3, 1861) and Bunker Hill (July 15). In November he received a command in the army of the Ohio, and contributed greatly to the important victory at Mill Springs (January 19–20, 1862). On the advance into Kentucky, he was appointed second in command of the army of the Ohio, and lead the right wing in the battle of Perryville (October 8). During 1863, in the battle of Murfreesboro', T. led the center of the army under General Rosecranz, and at the battle of Chickamanga he sustained a five hours' struggle against overwhelming forces, and alone prevented the defeat of the Federal army.

On October 27, he received his commission as brigadier-general in the regular army, and during the campaign of 1864 he served under General Grant. On the 27th September of that year he was placed in chief command in Tennesse, where he was successful in out-manœuvring General Hood, and inflicting a severe defeat upon him at Franklin (November 30). On the 15th and 16th December he completely defeated Hood, destroying his army, for which he was thanked by Congress and voted a gold medal by the State of Tennessee. In 1869 T. commanded the military division of the Pacific, with headquarters at San Francisco, where he died, March 28, 1870.

THOMAS, THEODORE, an eminent American musician, born in Hanover, Germany, 1835, and came to America with his father in 1845. He has become famous as an orchestral leader and conductor of concerts.

THOMAS, THEODORE GILLARD, an eminent American physician and surgeon, born in South Carolina, in 1831; educated at the South Carolina Medical College; in 1862 became professor of obsteterics in the College of Physicians and Surgeons in the City of New York, where he rapidly rose to distinction as a lecturer and surgeon. He has made a specialty of women's diseases, and has written a work upon that theme, which has been translated into several languages. He is one of the most brilliant surgeons of his time.

THOMPSON, DANIEL PIERCE, an American novelist, born at Charlestown, Mass., Oct. 1, 1795; educated at Middlebury College, Vt. (1820); removed to Virginia, where he taught for sometime, and was subsequently admitted to the bar; removed to Vermont (1824), and opened offices at Montpelier, where he died in 1868. He is chiefly known to the public by his works of fiction, the most popular of which were *The Green Mountain Boys* and *The Rangers*.

THOMPSON, JOSEPH PARRISH, D.D., LL.D., an American clergyman, born at Philadelphia, Pa., Aug. 7, 1819; educated at Yale College (1838) and in the theological seminaries at Andover and Yale; was pastor of Congregational churches in New Haven, Conn. (Chapel Street) and New York city (Broadway Tabernacle); and in 1873 removed to Germany, where he resided at Berlin. He was the author of numerous publications, among which the following may be mentioned: *Christianity and Emancipation; Man in Genesis and Geology; Church and State in the United States* and *Life of Christ*. Died at Berlin in 1879.

THOMPSON, ZADOC, an American scientist born in Vermont, May 23, 1796; educated at the University of Vermont (1823); was state geologist (1845–48) and one of the faculty of his *alma mater* (1851–53). He published *The History of Vermont* and *Geography and Geology of Vermont*, both of which are works of critical scholarship and permanent value. Died at Burington, Vt., in 1856.

THOM'SON, REV. JOHN, a Scottish landscape-painter, was born in the manse of Dailly in Ayrshire, September 1, 1778. It was in vain that the boy artist pleaded with his father to let him become what nature had made him: he was destined for the church; and so, after studying at the University of Edinburgh, he was duly admitted to the practice of the clerical profession. In 1800 he was appointed his father's successor, and in 1805 he obtained the parish of Duddingstone, near Edinburgh. While a divinity student he had taken lessons in his favorite art from Alexander Naysmith, and he now prosecuted it with such success, that before long he

was admitted an honorary member of the Royal Scottish Academy, and found so great a demand for the productions of his pencil, that his annual profits as an artist amounted to £1800. His favorite subjects were castles such as Craigmillar, and Highland scenes such as the Trossachs and Loch Achray. Not only were Sir Walter Scott, Sir Thomas Dick Lauder, and other Scottish celebrities, well-known visitors at the Duddingstone manse, but Turner and other English artists were among the rarer guests. T. died 27th October 1840. His elder brother, THOMAS T., abso born in the manse of Dailly, 10th November 1768 studied at Glasgow, passed advocate at Edinburgh in 1793, held the office of deputy clerk-registrar (instituted 1806), did good service under the Record Commissioners, edited a number of works for the Bannatyne Club, and contributed to the *Edinburgh Review*. In 1828 he was appointed one of the principal clerks of the Court of Session. He died at Shrubhill, Leith Walk, Edinburgh, 2d October 1852.

THOM'SON, SIR CHARLES WYVILLE, F.R.S., an eminent zoologist, was born at Bonsyde, Linlithgowshire, Scotland, March 5, 1830. He began the study of medicine at Edinburgh University in 1845, became lecturer on botany at King's College, Aberdeen, in 1850, was elected professor of natural history at Queen's College, Cork, in 1853, and in 1854 settled at Belfast as professor of mineralogy and geology in Queen's College, a chair which he afterwards united with the natural history chair vacated by Dr. Dickie in 1860. In 1870 he succeeded Allman in the zoology chair at Edinburgh University. He early directed his attention to the lower forms of animal life. The discovery, by G. O. Sars in 1864, of a new *Crinoid* at a depth of 700 feet, convinced T. that the accepted theory that life did not exist in deep water was not by any means established. To settle this point he has taken a leading part in the dredging operations of the government vessels, the *Lightning* (1868), the *Porcupine* (1869–70), and the *Challenger* (1872–76). Besides demonstrating the existence of life at all depths, these expeditions, especially the last, have added many new species of animals, and increased our knowledge of the physical characters of the great oceans. T. was knighted shortly after the return of the *Challenger*. He has written valuable papers on zoological subjects, beautifully illustrated by his own most finished sketches, and is author of *The Depths of the Sea*, giving an account of his two first cruises, and the *Voyage of the Challenger*, the first and second volumes of which, published respectively in 1876 and 1878, treat of the Atlantic. The voyage told severely on his health, and he died on 10th March 1882.

THOM'SON, THOMAS, was born at Crieff, in Scotland, April 12, 1773. After studying at the University of St. Andrews, he succeeded his brother, James Thomson, afterwards D.D., and minister of the parish of Eccles, Berwickshire, as editor of the Supplement to the 3d ed. of the *Encyclopædia Britannica*, graduated in medicine at Edinburgh in 1799, and was for some years subsequent to 1802 scientific editor of James Mill's *Literary Journal*. He was the first to introduce the use of symbols in chemistry, and to announce Dalton's Atomic Theory, privately communicated to him in 1804, in the 3d ed. of his *System of Chemistry* (5 vols. 1807). In 1818 T. became Professor of Chemistry in the University of Edinburgh, and died at Kilmun, in Argyllshire, August 2, 1852. T. was a very voluminous writer.

THOMWELL, JAMES HENLEY, D.D., LL.D., an American divine, born in South Carolina, Dec. 9, 1812; educated at South Carolina College (1831); entered the ministry of the Presbyterian Church, and, after presiding over a church at Lancaster, S. C., became professor of logic and belles lettres in South Carolina College (1838); resigned this position to become pastor of a church in Columbia, S. C., in 1840; returned to the college as professor of sacred literature and the evidences of Christianity in 1841; resigned to become pastor of a church in Charleston, S. C., in 1851; became president of the college (1852), and was made professor of theology in the Seminary at Columbia, S. C., in 1855. He published several controversial works, the most notable of which was *Arguments of Romanists Discussed and Refuted*. Died at Charlotte, N. C., in 1862.

THORBURN, GRANT, born near Dalkeith, Midlothian, Scotland, February 18, 1773, was in early life a nailmaker, and on account of political troubles removed to New York in 1794. After a chequered career, he became a successful seedsman, and as 'Lawrie Todd,' a voluminous writer for periodicals. He acquired a high character for practical benevolence; and the nobility of his disposition and strange vicissitudes of his life, are faithfully reflected in Galt's novel of *Lawrie Todd* (1830). His works include *Forty Years' Residence in America* (1834), *Men and Manners in Great Britain* (1834), *Fifty Years' Reminiscences of New York* (1845), and *Life and Writings of G. T., Prepared by Himself* (1852). He died at New Haven, Conn., January 21, 1863.

THOR'BURN, ROBERT, a Scottish painter, was born at Dumfries in 1818, studied at the Edinburgh Academy from 1833, and three years later proceeded as a miniaturist to London, where he rapidly rose to fame. He adopted a largeness of size as well as of style unusual in miniatures, and in aiming at the higher qualities of oil-painting lost none of the purity, brightness, and transparency peculiar to able paintings on ivory. For many years his portraits, on account of their art not less than the eminence of their subjects, were among the most attractive works exhibited at the Royal Academy, while the long roll of his illustrious sitters included the Queen, the Prince Consort, and many members of the royal houses of France, Germany, Belgium, &c. T. was particularly happy in the treatment of female beauty. He was made A.R.A. in 1848, and died 19th November 1863.

THOR'EAU, HENRY DAVID, born in Boston, Mass., July 12, 1817, graduated at Harvard in 1837, was a schoolmaster till 1840. An abolitionist who had run into perils by his efforts against slavery, an ardent naturalist, 'who knew,' says his friend Emerson, 'the country like a fox or a bird,' he withdrew in 1845 to a hermitage, built by himself in Walden Wood, and there for two years lived at an annual cost of $70. From this solitude T. emerged to pursue his father's calling of pencil-making at Concord, where he died 6th May 1862.

THORN'BURY, GEORGE WALTER, born in London, England, in the autumn of 1828, for a short time studied painting, but ultimately devoted himself to letters, contributed a series of papers on topography to the *British Journal* (1845), and to the *Athenæum* (1851) some chapters on the Crystal Palace, afterwards republished. Essayist, novelist, lyrist, biographer, traveler, and art-critic, T. was also a successful lecturer; but sank under overwork, and died 11th June 1876.

THORN'HEADED WORMS, or ACAN'THOCEPH'ALA, a group of *Scolecida* allied to the *Nematoid* worms, and so named from the armature of the head. They are internal parasites, possessing neither mouth nor digestive system, and having a proboscis armed with hooks. The sexes are distinct. The only distinct genus of T. W. is *Echinorhynchus*, the species of which, in a fully-grown condition, inhabit the digestive system of vertebrates, and occur in fishes, birds, and mammals. The young undergo a metamorphosis. Thus the embryos of *E. gigas*, which inhabit the pig's intestine, are found in the larvæ of the cockchafer.

THORP, the Scandinavian equivalent of the Ger. dorf, 'a village,' in local nomenclature sometimes stands by itself, *e. g.*, Le Torp, in Normandy; but oftener appears as a suffix, as in Eng. Althorp, Wilstrop, and Nor. Clitourps. Being Danish rather than Norwegian, this suffix often helps us to determine whence Scandinavian settlers arrived in England; and whilst it is very common in E. Anglia, it occurs very seldom in Westmoreland, but once in Cumberland, and never in Lancashire.

THOURHOUT' ('Thor's wood'), a town of Belgium, province of W. Flanders, 14 miles S.W. of Bruges by rail. It manufactures mustard, starch, sabots, hats, &c., and has a teacher's training-school. Pop. (1873) 7857.

THRASYBU'LUS, a celebrated Athenian general and democratic leader in the latter part of the Peloponnesian War, first heard of (411 B C.) as commanding a galley in the fleet at Samos, afterwards one of the most active in bringing about the downfall of the Four Hundred and the recall of Alcibiades. His close friendship with the latter involved him in his disgrace after the battle of Notium, and on the establishment of the Thirty Tyrants he was banished, and retired to Thebes. In 403 he entered Attica at the head of seventy other exiles, seized Pyle, and occupied the Peiræus, and ultimately forced from the oligarchical party a general amnesty. In 394 he commanded the Athenian armies in Bœotia and before Corinth, and in 390 was sent with forty ships to aid the Rhodians against Teleutias. He next sailed to Byzantium and reduced several of the islands, but while cruising on the Pamphylian coast he cast anchor in the mouth of the Eurymedon, and was murdered in his tent by the natives during the night (390).

THREAD-CELLS, the name given to certain peculiar cells or cysts, found chiefly in the tissues of *Cœlenterate* animals. They contain fluid, and are provided with an internal thread-like filament. Under pressure the cell ruptures, the thread is everted, and the fluid escapes. These cells form a poison-apparatus for paralyzing prey.

THURMAN, ALLEN G., an American statesman, born at Lynchburg, Va., Nov. 13, 1813, and began the practice of law in Ohio in 1835. He was elected to Congress, was a judge of the supreme court of Ohio, and in 1869 was made U. S. senator. He has been one of the most prominent leaders of the Democratic party, and was a candidate for the presidential nomination in 1876, 1880, and 1884.

THYLACO'LEO, a remarkable genus of extinct *Marsupialia*, the fossil remains of which occur in the Recent or Tertiary and Post-Tertiary deposits of Australia and Tasmania. Professor

Flowers regards T. as a 'highly-modified and aberrant form of the type of marsupials now represented by the *Macropodidæ* (Kangaroos) and *Phalangistidæ*, though not belonging to either of these families as now restricted.' A characteristic of T. is the presence in each jaw of one large, compressed, and sharp-edged premolar tooth. The canines are small.

TICKELL', THOMAS, a minor English poet, was born at Bridekirk, Cumberland, in 1666. After studying at Oxford, where he became Fellow of Queen's College in 1710, he obtained from Addison the office of under-secretary of state in 1717, and about seven years later was appointed secretary to the Lords Justices of Ireland. He died in 1740. T. is mainly remembered by his translation of the first book of *Homer*, his *Elegy on Addison*, and his contributions to the *Spectator*. The first of these has transmitted to modern times a curious question as to its authorship and the circumstances of his birth; for it happened to come out about the same time as Pope's translation, and the suspicious poet averred that it was really the work of Addison, and was issued with a hostile intention towards himself. Dr. Johnson, Goldsmith, and Macaulay agree in high admiration of the *Elegy*, while Steele maintained that it was only prose in rhyme. T.'s poems are collected in vol. xi. of Chalmers' *English Poets*, and an American edition appeared at Boston in 1854.

TIER'NEY, GEORGE, a London merchant's son, was born at Gibraltar, 20th March 1761, from Eton passed to Peterhouse, Cambridge, and graduated LL.B. (1784). Called to the bar, he published *The Real Situation of the East India Company* (1787), and in 1796 entered parliament, where he rose by his powers of debate to be leader of the Whigs. In 1798 he fought a duel with Pitt, on whose retirement from office in 1803 T. was appointed Treasurer of the Navy, subsequently becoming Secretary of State for India and President of the Board of Control (1806), head of the Opposition (1817), and Master of the Mint (1827). He died in London, 25th January 1830.

TIFFIN, in Seneca Co., O., on the Sandusky River. It has three railroads, and is principally engaged in manufactures. Pop. 8000.

TI'GER BEE'TLE (*Cincindela campestris*), a species of beetle belonging to the Pentamerons section of the order *Coleoptera*. The head is broader than the *prothorax*, the jaws are long and curved, and the legs are slender. The color is brownish, marked with lighter dots and stripes. The T. B. is common in sandy places, and on the shores of rivers and ponds. It runs swiftly, and is difficult to capture. *C. campestris* and *C. vulgaris* are familiar species.

TIGHE, MRS. MARY, an Irish poetess, born in Dublin, in 1774, and married her cousin, Henry T., of Woodstock, M.P., in 1793. Though her poem *Psyche, or the Legend of Love* was privately printed by C. Wittingham (Lond. 1805), it was only after her death, which took place March 24, 1810, that her writings were given to the world. The first edition was in 1811, and they have been frequently reprinted. The *Psyche* is written in the Spenserian stanza; and at least, by Leigh Hunt's admission, occasionally contains a fancy not unworthy of a pupil of Spenser. Her other poems are short occasional pieces, frequently of a religious cast. It is probably as the subject of Moore's lyric, 'I saw thy form in youthful pride,' and of Mrs. Heman's *Grave of a Poetess*, that Mrs. T. is destined to be longest remembered.

TILDEN, SAMUEL JONES, an American statesman, born at New Lebanon, Columbia Co., N. Y., Feb. 9, 1814, educated at Yale College, and became a lawyer in New York. In 1874 he was elected Governor of New York by the Democratic party, and in 1876 was nominated for the presidency by that party, but was defeated by R. B. Hayes, the Republican candidate.

TILLICOULT'RY, an industrial town of Scotland, county of Clackmannan, on the Devon, 2 miles E. of Alva and 9 N.E. of Stirling by rail. It is the seat of an important woollen trade, and has several large mills engaged in the production of shawls, plaids, and tartans. Coal and limestone are extensively wrought in the vicinity. There are five churches. Pop. (1881) 3732.

TILLODON'TIA, an order of Mammalia constructed by Professor Marsh to include certain peculiar extinct quadrupeds, the remains of which occur in the Eocene Tertiary rocks of the United States. The molar teeth in the T. have grinding crowns, and resemble those of *Ungulata*. Small canine teeth are developed, and each jaw has two very long incisors, similar to those of *Rodentia*, these growing, like the incisors of the last-named forms, from persistent pulps. The feet, like those of bears, are *plantigrade*, and possessed of five toes each. The femur has a third trochanter. Of this curious order the typical genus is *Tillotherium*, in which form the characters of ungulata, carnivora, and rodentia appear to be united. The average size of these remarkable extinct mammals was that of the Tapir.

TILTON, THEODORE, born at New York, N. Y., in 1835; educated at the public schools; and editor of the New York *Independent* for several years, and afterwards of other literary periodicals. He has published several works, the best known of which is *Tempest Tossed*. He has also published a volume of poems. In the year 1874 he sued the Rev. Henry Ward Beecher of Plymouth Church, Brooklyn, for $100,000 damages for the seduction of his wife, but failed to secure a verdict.

TIME. According to Clerk Maxwell, the idea of T. is 'the recognition of an order of sequence in our states of consciousness.' By the exercise of memory, the events in one's experience may be arranged chronologically, and by intercourse with others, and comparison with natural phenomena which recur in a uniform rythmic manner, all events whatever may be systematically arranged according to their place in T. The measurement of T. is involved in the statement of Newton's First Law. Our ordinary units depend upon the motion of the earth; but it would be possible to get a more general unit, say the T. of vibration of a wave of light of a definite wave length and refrangibility.

TIN'AMOU (*Tinamotis*), an aberrant group of *Rasorial* or *Gallinaceous* birds, occurring in S. America. They have a very short, even rudimentary tail. The elegant T. (*T. elegans*), the familiar species, attains the size of a large grouse. The neck is long, and the color is a greyish buff on the head and neck, the head being crested, while the back is of a buff and blackish brown. The bird feeds on grain-seeds. It is easily captured.

TINNEVELL'Y, the chief town of the district of the same name in the Madras Presidency, British India, 50 miles N. from Cape Comorin, and 513 miles S.W. of Madras by rail; pop. (1871) 21 044. It almost adjoins the military station of Palamcottah. The *district* of T., the most S. in the peninsula, has an area of 5176 sq. miles; pop. (1871) 1,693,959. About 100,000 are native Christians, of whom the Roman Catholics live in fishing villages along the coast, while the Protestants are collected in towns. The crops are rice, cotton, and tobacco; the manufactures, jaggery sugar from the date palm, cotton cloth and muslin. The chief port is Tuticorin.

TIPPECANOE, BATTLE OF, an engagement between an American force under Gen. Harrison and a body of Indians, Nov. 5, 1811, which resulted in the complete defeat of the latter. It was from this battle that Gen. Harrison was afterwards called, in political life, 'Old Tippecanoe.'

TIRAILLEURS (Fr.), skirmishers or sharpshooters. The name does not occur in the French army before the year 1792. It was given to certain bodies of French marksmen during the first campaigns of the revolutionary war, whose business was to annoy the front of an advancing or the rear of a retreating enemy.

TITANOTHE'RIUM, an extinct genus of *Mammalia*, the remains of which occur in Miocene deposits of N. America, and which is included by Marsh in the Ungulate family *Brontotheridæ*. These animals were large, had long skulls, small incisor teeth, and very large horn cores.

TITUSVILLE, in Crawford Co., Pa. It has three railroads; is engaged in the oil trade and is the location of a number of refineries. It manufactures engine boilers, oil, flour and fruit barrels, artesian and oil well machinery, brooms, furniture, and hemlock bark extract. Pop. 9046.

TODD, HENRY JOHN, D.D., an industrious English author, born in 1763, studied at Hertford College, Oxford, where he graduated (1786), took orders, and became successively vicar of Milton, near Canterbury (1792), rector of All Hallows, Lombard Street, London, and keeper of the MSS. at Lambeth Palace, and rector of Settrington, Yorkshire (1820), where he died, 24th Dec. 1845. Among his voluminous works the most valuable are his elaborately annotated editions of Milton and Spenser, his *Illustrations of the Lives and Writings of Gower and Chaucer*, and his expanded edition of Johnson's *Dictionary*.

TODD, JAMES HENTHORN, D.D., a distinguished Irish scholar, was born at Dublin, Ireland, April 23, 1805, and graduated at Trinity College, Dublin, of which he became a fellow in 1831. Entering the Church, he was appointed professor of Hebrew (1849), and librarian of Dublin University (1852); was twice chosen Donellan lecturer, became treasurer and precentor of St. Patrick's Cathedral (1864), took a leading part in founding the Irish Archæological Society, and for five years was president of the Royal Irish Academy. He died at Rathfarnham, near Dublin, 28th June 1869.

TODD, JOHN, D.D., an American clergyman, born at Rutland, Vt., Oct. 9, 1800; educated at Yale College (1822) and Andover Seminary (1826), was pastor of churches at Groton, Mass., Northampton, Mass., Philadelphia, Pa. (First Congregational), and Pittsfield, Mass.; and subsequently helped to found Mount Holyoke Seminary, an institution for the education of young ladies. He published numerous works, among which the following may be mentioned: *Student's Manual*, *Truth made Simple*,

Summer Gleanings and *Future Punishment*. Died at Pittsfield, Mass., in 1873.

TODMOR'DEN, a market town on the borders of Lancashire and Yorkshire, 9 miles N.N.E. of Rochdale by rail, is picturesquely situated in a hill-girt valley, watered by the Calder. It contains fine Anglican churches and numerous chapels, an Oddfellows' hall, a masonic hall, and a new town-hall (1875) in the Corinthian Order, in front of which stands a bronze statue by Foley of the late John Fielden, M.P. Besides enormous cotton-mills, there are manufactories of calicoes, fustians, dimities, and bobbins, iron foundries, and machine works, &c. T. publishes two weekly newspapers. Pop. (1881) 23,861.

TÖK'ÖLY, EMERIC, COUNT, born at the castle of Käsmark, in the Hungarian comitat of Zip, in 1656, on the death of his father, a Protestant noble and insurgent (1671), fled to Transylvania. Here Prince Apafi gave him the command of troops, with which, in 1678, joining the Magyar patriots, he ravaged Moravia, took Kaschau (1682), and marched with the Turks upon Vienna. Treacherously arrested by Kara Mustapha (1685) and sent to the Sultan at Adrianople, T. was released in 1686 and furnished with 9000 Turkish soldiers for further operations against Austria. Created Prince of Transylvania, he defeated Heusler at Yernesi (1689), but was compelled to retreat before the Prince of Baden into Wallachia. He later shared in almost all the Turkish operations against the Austrians, and, excluded from the amnesty that followed the Peace of Karlowitz (1699), lived at Constantinople, dying on his estate of Ismid, 13th September 1705.

TOL'TECS, a Mexican race who are supposed to have been supreme in Central America from the 7th to the 11th centuries. They were completely obliterated by the Aztecs and Tezcucans, who held the country when the Spaniards first landed. The latter races were of a martial spirit, but they were indebted for their arts, their civilization, and their religion to their milder predecessors. The T. present striking analogies to the Etruscans, and in a less degree to the Egyptians and Assyrians. They were great builders, and their religion was a mystic system of great complexity, intimately connected with the study of astronomy, and interpreted by a priesthood, who formed an exclusive caste. See Prescott's *History of the Conquest of Mexico*, book i.

TOMBIG'BEE, a river which rises in Mississippi, and after a S. by E. course of 450 miles through that state and Alabama, joins the Alabama River 45 miles above Mobile, after which the united stream is called Mobile River. The T. is navigable for 410 miles from Mobile Bay.

TOMMASE'O, NICCOLO, a prolific Italian writer, was born at Sebenico in Dalmatia in 1803. After a course of study at Padua, he worked at Florence for the *Antologia di Firenze*, and in 1333 went to France, and after a stay of some years to Corsica. In 1838 he came to Venice, where, in consequence of a petition to the Emperor for a milder exercise of the censorship, he was arrested together with Daniel Manin (January 18, 1848). Liberated by the people on the 17th March, he eagerly entered into the struggle for independence, and was appointed, under the provisional government of Manin, minister of public worship. On the downfall of the Venetian Republic (August 1849) he retired to Corfu, where he prosecuted his arduous studies, though he had become almost blind in consequence of a severe illness. In 1854 he returned to Turin, and in 1859 settled at Florence, where he died May 1, 1874. As a writer T. was distinguished by profound and wide learning, and by the rare union of Catholic feeling with liberalism and patriotism.

TOMPKINS, DANIEL D., an American politician, born at Scarsdale, N. Y., June 21, 1774, and graduated from Columbia College in 1795. He began to practice law in New York City in 1796, and soon became prominent in politics. He was a member of Congress 1804–5, governor of New York 1807–17, was elected Vice-President of the U. S. in 1816, and again in 1820. Died on Staten Island, June 11, 1825.

TONAWANDA, a town of Erie Co., N. Y., on the Niagara River, the Erie Canal, and the New York Central and Lake Erie & Western railroads. It is engaged in manufacturing lumber and other articles, and is one of the largest lumber distributing points in the United States. Pop. 3864.

TONE, THEOBALD, WOLFE born in Dublin, Ireland, 20th June 1763, was educated at Trinity College, and going to London to study law, was called to the bar at the Middle Temple (1789). The outbreak of the French Revolution drew him to politics, and having promoted the fraternization of Irish Catholics and Dissenters, he founded in 1791 the society of United Irishmen. The discovery of his intrigues with France drove him a fugitive to the United States (1795). Thence crossing to France, he sailed in the squadron, dispatched by the Directory to Bantry Bay (1796); next served a year in the Bavarian army; till, joining once more a French expedition to Ireland, he was taken prisoner, and brought to Dublin, where, sentenced to death by a court-martial, he committed suicide in prison, 19th November 1798. See his *Autobiography* (1826), and Madden's *Lives of the United Irishmen*.

TONK (*Tank*), the capital of the native state of the same name in Rajputana, India, 218 miles S.W. of Delhi, and 289 N. of Mhow. It is of considerable size, with a wall and mud fort. The *state* of T. comprises six scattered districts. Area, 2730 sq. miles; pop. 320,000. It is the only Mohammedan state in Rajputana, and the chief is styled Nawab.

TÖNN'ING, or TÖNN'INGEN, a seaport of Prussia, province of Schleswig-Holstein, at the mouth of the Eider, 30 miles S.W. of Schleswig by rail. It has a fine harbor, a beautiful market-place, and an excellent school of navigation. T. carries on a large trade with England in cattle and Danish farm produce. Pop. (1875) 3130.

TÖNS'BERG, the oldest town in Norway, on a fjord separated from Christianiafjord by the islands Tjömö and Nötterö, and connected therewith by the *stenskanal*, cut through the town. T. has a 'Middleskole,' and large freight trade. Pop. (1875) 5100.

TON'SON, JACOB, one of the great publishers of the Dryden and Pope period, 'the left legg'd Jacob' of the latter poet, was born in 1656. He commenced business in Chancery Lane, London, in 1677, removed to Gray's Inn in 1697, and thence in 1712 to the Shakspeare's Head, opposite Catharine Street in the Strand. He retired from business in 1720, and died March 18, 1736. T. is worthy of remembrance as Dryden's regular publisher, as the originator of the miscellanies which bear his name, as having brought out the first good editions of Milton and the first complete octavo edition of Shakspeare, and as the secretary of the Kit Cat Club, which used to meet in his villa at Barn Elms on the Thames.

TOOMBS, ROBERT, born in Georgia, July 2, 1810, and was educated at the University of Georgia and Union College, and pursued law studies at the University of Virginia. He began to practice law at Washington, in his native state, and rapidly achieved success. In 1844 he was elected to Congress, where his brilliant powers as a debater, soon won for him a prominent place. The secession agitation found him in Congress, but he resigned in 1861, and upon his return home was elected to the Confederate Congress at Montgomery. He was for a time secretary of state under Jefferson Davis, and afterwards entered the Confederate army, where he rendered gallant services. At the close of the war he lived abroad for a time, but in 1867 returned to the U. S. and resumed the practice of law.

TOP'LADY, AUGUSTUS MONTAGUE, an English theologian and hymnist, was born at Farnham, Surrey, in 1740, and educated at Westminster and Trinity College, Dublin. After holding a curacy for some years in Somersetshire, he was presented in 1768 to the vicarage of Broadhembury, Devonshire. He died in London, August 11, 1778. His works were published in 6 vols. 8vo, in 1825; new ed. in 1 vol. 1837, with a memoir. Though a voluminous writer—and a strenuous defender of Calvinism against John Wesley—T. is now hardly known except as the author of the hymn, *Rock of Ages*, one of the most exquisite expressions of evangelical faith and fervor to be found within the compass of the English tongue. A Latin version by Mr. Gladstone (*Translations by Lord Lyttleton and the Right Hon. W. E. Gladstone*, Lond. 1861) has added fresh beauty to the original.

TORFAENS (Latinized form of *Torfason*), THORMODR, a Danish historian, was born at Engö, Iceland, May 27, 1636. In 1662 he was sent by Frederik III. to Iceland to collect MSS. of sagas, and he was afterwards successively appointed royal antiquary (1667), and historiographer-royal (1682). He died at Karmö, near Stavanger, Norway, January 31, 1719. Of his many historical works the chief are *De Rebus Gestis Faröensium* (1695), *Series Dynastarum et Regum Danioe* (1702); *Historia Vinlandiæ Antiquæ* (1705); *Groenlandia Antiqua* (1706); and *Historia Rerum Norvegicarum* (4 vols. fol. 1711).

TORREY, JOHN, LL.D., an American scientist, born at New York, N. Y., in 1798; educated at the New York College of Physicians and Surgeons (1818); professor of chemistry and geology in the U. S. Military Academy, at West Point (1824–27); subsequently a member of the faculty of the college of physicians and surgeons, New York, and afterwards of Princeton College; and in 1853, become chief assayer of the United States. Died at New York, March 10, 1873. He was the author of several works treating of botanical themes.

TOR'SION, in mathematics, is the rate at which the osculating plane rotates per unit of length of the curve, where by *osculating plane* is meant the plane containing the tangent and the radius of curvature. A plane curve has no tortuosity; hence a *tortuous* curve, called by some a curve of double curvature, cannot lie in a plane. In mechanics the term is applied to the force with which a body, such as a thread, wire, or slender rod of metal, resists a

twist. Experiment shows that within certain limits the T. is proportional to the angle through which the body is twisted, and that these limits depend upon the elasticity of the material. If a metallic wire stretched by a weight is twisted through a moderate angle, and then left to itself, it will begin to untwist and then to retwist, and so on in a series of perfectly isochronous and regular oscillations. The measure of the T. depends on the time of oscillation.

TONGU', the chief town of the district of the same name in British Burmah, on the right bank of the Sittang river, down which it exports timber and rice. Pop. (1872) 10,195. It was the capital of the Pegu dynasty, which attained great power in the 16th c.; and was chosen in 1858 for the exile of Behandur Shah, the banished Mogul Emperor of Delhi, and is still the residence of his son.—The *district* of T. lies on the frontier N. of Rangoon and E. of Prome. Area 6354 sq. miles; pop. (1872) 86,166. It is the home of the aboriginal tribe of Karens.

TOUR'ACO (*Turacus*), a genus of African birds belonging to the *Conirostral* division of the *Insessores* or perchers. The T. is allied to the plantain-eater, and has a short bill, the fourth, fifth, sixth, and seventh quills being longer than the others. The White-Crested T. (*Turacus albocristatus*) is the best-known form. It attains the size of a crow, is olive-green on its upper parts, the prominent crest being green with a white edge. The T. is wary and inquisitive. It inhabits trees, and runs quickly amongst the branches.

TOURGEE, Albion Winegar, an American author, born in Ohio, May 2, 1838; educated at Rochester University; served in the Union army during the war of the rebellion; opened a law office at Greensboro', N. C., at the close of the war; subsequently removed North, and since then has devoted himself to literary effort. He has published *Bricks without Straw*, *The Fools Errand*, *Figs and Thistles*, &c. These works, although in the form of novels, are, in reality, a discussion of the Southern Problem, and as such have attracted much attention, and have met with large sales.

TOWNSEND, George Alfred, a brilliant American journalist and author, born at Georgetown, Del., in 1841; early in life engaged in journalistic work; acted as war correspondent of the New York *Herald* during the Civil War, his letters attracting much attention by their general literary merit; traveled abroad, and, on his return, was Washington correspondent for several papers, writing under the name of Gath; subsequently removed to New York. He is the author of a volume of poems and other works.

TOWSON, Nathan, born in Maryland, in 1784; entered the army, and served with marked distinction in the war of 1812, taking part in the battles of Queenstown, Stony Creek, Chippewa, and Niagara, and rising to the rank of major-general, and also serving in the Mexican war. Died at Washington, D. C., July 20, 1854.

TOXOC'ERAS (Gr. 'bow-horn'), a genus of extinct *Cephalopoda* or cuttlefishes belonging to the family *Ammonitidæ*, and having a bow-shaped or armate shell. Species of T. occur in rocks ranging from the Lower Oolites to the Gault. The most typical development is found in the Cretaceous rocks.

TOX'ODON (Gr. 'bow-toothed'), an extinct species of Mammals forming the type of the order *Toxodontia*, the remains of which are found in recent deposits in S. America. The Toxodonts, of which only two genera (*Toxodon* and *Mesodon*) are known, present a singular combination of the characters of Ungulata, Rodentia, and Edentata. The skull is large, and the molar and premolar teeth are strongly bent or folded. These teeth were rootless, and grew from permanent pulps. The lower jaw had small canine teeth, occurring, like the canines of the horse, between the incisors and premolars. No traces of limbs have been found in a fossil state.

TRANSBAIKA'LIA, a province of the Russian Empire, E. Siberia, lying S. and E. of Lake Baikal. Area 240,774 sq. miles; pop. (1873) 447,568, among whom more than a third are heathen Mongols, Tungusians, &c. T. is a diversified mountain-land, richly wooded, with fine pasturage. Its metallic wealth is great, consisting of silver, lead, gold, copper, tin, coal, and asphalt. The center of the mining industry is Nertchinsk, the chief town is Tschita.

TRANSPLANTA'TION OF TISSUES. Modern surgery has, within recent years, been very fertile in numerous discoveries, and especially as regards the T. of T. Professor Nussbaum of Munich, in 1875, described a new operation for the loss of bone which he denominates *transplantation of bone*. It consists of cutting off from the rest of the bone a portion of its external shell, covered by the periosteum, and leaving this shell of bone attached to the remainder by means of the periosteum covering its terminal extremity. This semi-attached bone is displaced into the gap in the same way as a flap of skin is twisted in a plastic operation, and fixed in the indurated soft tissues of which the gap is formed. The operation was first performed in a case of non-union of the ulna, the result of loss of bone from a gunshot fracture. Attempts have also been made to *transplant* periosteum which may form the nidus of bone.

The transplantation of skin may be effected by displacement, or by torsion. The first mode is effected by dissecting up a piece of skin, of the required size and shape, a portion of it being left attached. The loose portion is then shifted into the part where it is intended to lie. In the method by torsion, the position of the flap of the skin is changed, and the neck of skin, forming the attachment, is made as slender as is consistent with the maintenance of vitality. In both cases the edges of the transplanted skin are brought into close contact by means of stitches, with the cut edges of the skin where union is desired. Transplantation of skin can be effected from one part of the body to another, as from the arm to the nose, or from the thigh to the hand. *Transplantation of skin*, by grafting, was invented by M. Reverdin of Geneva in 1869, and was introduced into British surgery by Mr. Pollock in 1870. This operation is peculiarly adapted to cases where large granulating surfaces are exposed, as in cases of extensive burns. It is essential that the granulations should be perfectly healthy, and that all irritation in the sore should have ceased. The operation may be performed with a pair of fine forceps and sharp curved scissors. A small portion of skin, hardly larger than a pin's head, is snipped off with the scissors.

The whole thickness of the skin should not be cut through, but only a small portion of it, so as to make sure of removing the *rete mucosum*, as the growth of the graft seems to depend on the cells of the *rete Malpighii*. The grafts are placed firmly on the granulations, about an inch apart, and are covered with oil silk, moistened with oil to prevent its sticking when removed, and the whole is fixed with strapping and covered with cotton wool. The dressing should be renewed in three or four days. The grafts first change into little, round, vascular-looking buds; and in a short time the new cuticle is seen extending in all directions from the bud. That the new skin is due to the graft, is evident from the fact that a graft from a negro placed on a European produces a dark-colored skin; and a graft from a European transplanted on a negro produces a white portion of skin. Very recently T. of T. has been introduced into dental surgery.

TRAZ-OS-MON'TES ('beyond the mountains'), a province in the N.E. of Portugal, bounded N. and E. by Galicia and Leon (Spain), W. by Entre Douro e Minho, and S. by the Douro, which separates it from Beira. Area, 3999 sq. miles; pop. (1875) 374,837. Besides forming the southern frontier, the Douro follows great part of the W. boundary, and the province is watered by its affluents, the Sabor, Tua, and Tamega. T. is the loftiest part of Portugal; in the N. it is entered by the mountains of Leon (culminating in Serra de Monte Zinho, 9080 feet), and throughout has a wild, highland character. The district of Alto-Douro is noted for its port wine, while the uplands yield sumach and the valleys wheat, rye, hemp, flax, maize, oranges, almonds, &c. Silk is cultivated to some extent, and there are iron mines and mineral wells. The chief exports are mules, wool, silk, and wine. The capital is Bragança.

TREBIN'JE, a town (formerly capital) of Herzegovina, on the Trebinschitza, 17 miles inland from Ragusa. It is the seat of a Catholic bishop, and has a garrisoned castle. Pop. 10,000 (or according to Roskiewicz, 3000). During the war of the Austro-Hungarian occupation, Suleiman Pasha was shut up at T. with 1500 men, and an equal number of Bosnian troops joined the insurgents here, 20th September 1878.

TREE-CRAB (*Birgus*), the name applied to certain crabs, which are ranked among the 'land-crabs.' *B. latro* is a familiar species. It breaks open the shell of the cocoa-nut and of other fruits by repeated blows of its great claws. The T.-C. can live for long periods out of water, but deposits its eggs in the sea, to which it makes periodical journeys.

TREE KANGAROO (*Dendrolagus*) is so named from its arboreal habits. It belongs to the kangaroo family (*Macropodidæ*), but differs from the true kangaroo in having its fore-legs nearly as long as the hinder members. The tail is not used to support the body as with the ordinary kangaroo, and the claws are very long and curved. The T. K. occurs in New Guinea.

TREITSCH'KE, Heinrich Gotthard von, an able German publicist and historical writer, born at Dresden, September 15, 1834, studied at Bonn, Leipzig, Tübingen, and Heidelberg, became *privat-docent* in history at Leipzig in 1858, and 1863 professor at Freiburg, resigned his chair in 1866 in consequence of the attitude of Baden in the German crisis, and went to Berlin, where he undertook the management of the *Preussischen Jahrbücher*, to which he had contributed since 1858. In the autumn of 1866 he was called as a professor to Kiel, and next year accepted a chair in Heidelberg, which he vacated for another at Berlin in 1874.

TREVEL'YAN, Sir Charles Edward, Bart., K.C.B., a son of the late Archdeacon T. of Taunton, was born in England in 1807, educated at the Charterhouse and Haileybury College, and entering the East India Company's Civil Service, held important posts under Lords Auckland and Bentinck. His vigorous action promoted the abolition of Indian transit and town dues, and the introduction of educational institutions on a European model. In 1840 he was appointed Assistant-Secretary to the Treasury, and in 1848 was made K.C.B. for his attempts to relieve the distress caused by the Irish famine. With Sir Stafford Northcote and others he was long engaged in the revision of the civil establishments which led to the Civil Service being thrown open to public competition. He was Governor of Madras from 1859 to 1860, when he was recalled for protesting against the new taxes then imposed by the Government of India, although the Imperial government accorded him a highly eulogistic vote of thanks. In 1862 he became Financial Minister in India, a post in which he inaugurated important fiscal reform and a vast extension of public works, and which he resigned on account of ill-health in 1865. On his return he published two able pamphlets on army reform, a subject on which he had given evidence before the Royal Commission of 1857. Having subsequently devoted his attention to metropolitan charities, he was created a baronet in 1874. T. married Miss Hannah More Macaulay in 1834. He died 23d March 1879.—George Otto T., son of the preceding, was born at Rothly Temple, Leicestershire, 20th July 1838, and passing from Harrow to Trinity College, Cambridge, graduated as second classic. He entered the East India service by competition, but soon returned from India and was elected liberal representative of Tynemouth in 1865, and of the Scottish Border Burghs in 1868. In the second Gladstone administration he was appointed Civil Lord of the Admiralty (December 1868), but resigned office in July 1870, being opposed to the Educational Bill of the ministry. He strongly advocated, in and out of Parliament, a sweeping army reform, including the abolition of purchase, effected in 1871. The Volunteer movement had his active support, and he opposed the Regimental Exchanges Bill of 1875. He became Secretary for Ireland, May 1882, in succession to Lord Frederick Cavendish, who was murdered in the Phœnix Park, Dublin.

TREVI'SA, John, born in Cornwall, England, about the middle of the 14th c., was educated at Queen's College, Oxford, where he was a friend of Wiclif's, became vicar of Berkeley in Gloucestershire, and canon of the collegiate church of Westbury. He is said to have died in 1412. T. spent most of his leisure in turning Latin books into English. His chief works are a translation of Higden's *Polychronicon* (1387), one of the earliest specimens of English prose, of Occam's *Dialogue between a Soldier and a Clerk*, and of *Bartholomæus de Proprietatibus Rerum*, which last, a very mine of rare English words, stands in the list of proposed reprints of the Early English Text Society. Caxton said that T. had also translated the Bible; but his version, if it ever existed, is not known to be extant.

TRIBE'NI, 'the confluence of three rivers.' Such a spot is peculiarly sacred in Hindu mythology. The most frequented places of pilgrimage which bear this name are (1) in the district of Hoogly, Bengal, at the junction of the Hoogly river with the Jamuna and the silted-up bed of the Saraswuttee; (2) the town of Allahabad, where the Ganges and Jumna meet, and the third stream is imaginary; (3) where the Gunduck river and two of its affluents debouch from the mountains of Nepal on to the plains in the British district of Chumparun.

TRIGG'ER-FISH (*Balistes*), a genus of fishes belonging to the order *Teleostei* and to the sub-order *Plectognathi*, and deriving their popular name from the peculiar nature of the first ray or spine of the first dorsal fin. This ray is very strong, and remains in an erect position until the second ray is depressed, when it falls like the trigger of a gun. The T. occurs in tropical seas, and is allied to the urchin-fish.

TRIKU'PIS, Spirid'ion, a Greek statesman and historian, was born at Missolonghi in 1791, and in 1810 was sent to study in London by Lord North, who as Governor of the Ionian Isles chose him for private secretary. Throughout the Greek War of Independence, excepting the presidency of Capo d'Istria, he filled a number of important posts, and under Otto I. was three times envoy to London (1835–38, 1841–43, 1850–62), minister of foreign affairs and public instruction (1843), and president of the senate (1844–49). On Otto's deposition T. withdrew from politics, dying at Athens, February 24, 1873. His *Historia tes Hellenikes Epanastaseos* (4 vols. Lond. 1853–57) is perhaps the chief literary product of modern Greece, and T. is also remembered for his funeral oration on Byron, and by a spirited Cleph war-song, *Ho demos* (Par. 1821). His son, Constantin, belonging to the Radical party, was president of the council (1875–76), and held the portfolio of foreign affairs in Comoundouros' ministry.

TRIMOR'PHISM. In certain species of plants two different combinations of reproductive organs occur, long stamens and short styles on some individuals and the reverse on others. This is called *dimorphism*, and we have examples in the flax and the primrose. T. is the existence of three different forms, as in the purple loosestrife. Fertilization, as a rule, takes place between the male and female organs of the *same height*, consequently securing *cross-fertilization*.

TRING, a market town of Hertfordshire, 31¾ miles N.W. of London by rail, on the Grand Junction Canal, has a Perpendicular parish church, 6 chapels, a market-house, a mechanics' institute, assembly rooms, &c., whilst in the neighborhood is T. park, a seat of the Rothschild's, built for Nell Gwynne by Charles II. Straw-plaiting, sild-throwing, canvas-weaving, and brewing are the chief industries. Pop. (1881) 4354.

TRINITY COLLEGE, an American educational institution, located at Hartford, Conn., and controlled by the Protestant Episcopal Church. It has superior buildings, a fine library, and large endowment.

TRIPET'T'Y, or TRIPATORE', a town in the district of N. Arcot, Madras Presidency, British India, on the right bank of the river Palar, 137 miles S.W. of Madras by rail. It is celebrated for the fine pagodas built on the neighboring hills, to which pilgrims flock in thousands from all parts of India. As a shrine, it is only second to that of Juggernauth in Orissa; and the high priest is known to derive an immense income from votive offerings. T. has a special manufacture of brass work inlaid with copper. Pop. (1871) 10,423.

TRIPLE TIME, in music, is a common measure of time, in which there are three beats to the bar. In compound T. T. there are six beats, the emphasis falling on the first and fourth.

TRI'TON, a genus of *Amphibia* vertebrates, including the water-newts of ponds and ditches. The *T. aquaticus*, *T. cristatus*, *T. Bibronii*, and *T. marmoratus* are familiar species. The name is also given to a genus of Gasteropodous molluscs, of which the *T. variegatus* or Sea Trumpet, the *T. anus* or Wrinkled T., and the *T. distortus* or Twisted T., are examples.

TRIVAN'DRUM, the capital of the native state of Travancore, in the extreme S. of the Indian peninsula, 50 miles N.W. of Cape Comorin, and 2 from the Malabar coast. In the center is a large fort, which contains a celebrated pagoda, the royal palace, and the courts of law; about 2 miles distant is the Residency of the British Political Agent. There is an excellent high school, hospital, and observatory, all under European superintendence. Among the inhabitants are many native Christians, mostly Roman Catholic, and also descendants of early Dutch and Portuguese settlers.

TRIV'ET, Nicholas, was born about 1258, studied at Oxford and Paris, entered the Dominican order, and died in 1328. His chief work is a Latin chronicle on the six English Kings of the House of Anjou (1136–1307). It was first published in 1719 by Anthony Hall, and again in 1845 by Thomas Hog for the English Historical Society. T. has considerable merit as a historian. He is careful and trustworthy in his use of authorities, writes well and breathes a religious spirit.

TROCADE'RO, a fort of Spain, province of Cadiz, 4 miles S.S.E. of Cadiz, captured by the French August 31, 1823. This victory has been commemorated in the name of the *place* in Paris opposite the Champs de Mars, and in that of the permanent building in connection with the Exhibition of 1878.

TRO'CHU, Louis Jules, the defender of Paris against the Germans, was born at Le Palais, in Morbihan, May 12, 1815. In 1835 he entered the special military school at Paris, in 1840 became staff-lieutenant, and in 1841 accompanied the 6th Light Infantry to Algiers. In 1842 adjutant of Lamoricière, and in 1846 of Marshal Bugeaud, he became in the June of 1852 Director of the Staff in the Ministry of War at Paris.

In the Crimean war he was adjutant of Marshal Saint-Arnaud, and, after his death, of General Canrobert; became in November 1854 General of Brigade, and at the head of the First Brigade of the First Army Corps covered himself with glory at the storming of the Malakoff, September 8, 1855. At the battle of Solferino in 1859 he led a division, and after the peace entered the war ministry, where he was destined as the successor of Niel. His pamphlet, *L'Armée Française* (1867), however, which revealed the weakness of the French army and advocated the adoption of the Prussian system, cost him the favor of the Emperor. On the outbreak of the German war he was summoned by Napoleon to the camp at Châlons, and appointed Governor of Paris, and on the popular revolution which followed the disaster at Sedan he became Commander-in-Chief of the army of defence in Paris. T., however, proved a man of plan more than of action, and on the 22d January 1871 he resigned his military command to General Vinoy, and in February his civil authority to the National As-

sembly of Bordeaux. In March 1872 he brought an action for libel against the editor of *Figaro*, in which he was unsuccessful, while his conduct after September 4, 1870, was subjected to much sharp criticism from the press, in consequence of which he resigned his place as a member of the National Assembly in July, and retired into private life at Belle Isle.

TROSS'ACHS (Gael. 'bristled territory'), a romatic defile forming an approach to the W. Highlands of Scotland, is situated in Perthshire, some 8 miles W. of Callander, and extends for about a mile between Lochs Achray and Katrine. The pass, which winds between Ben A'an on the N. and Ben Venue on the S., is confined by lofty rugged precipices, feathered to their summits with birch, pine, and other trees; in the words of Scott, whose name will be associated forever with the district—

> 'Crags, knolls, and mounds, confusedly hurl'd,
> The fragments of an earlier world.'

TROWBRIDGE, John Townsend, born at Ogden, N. Y., in 1827, took up his residence in Boston, Mass; and is known to the American public as a brilliant story-writer. His best-known works are *Father Bright-hopes*, *The Three Scouts*, *Fast Friends*, and *The Book of Gold and other Poems*.

TRUMBULL, Benjamin, D.D., an American clergyman, born at Hebron, Conn., in 1735; educated at Yale College (1759); and in 1760 became pastor of a Congregational Church at North Haven, Conn., which position he continued to hold until his death, Feb. 2, 1820. He was a chaplain in the Continental army. Among his works are *Complete History of Connecticut*, *General History of the United States*, and *Discourses on the Divine Origin of the Holy Scriptures*.

TRUMBULL, Jonathan, LL.D., an American patriot, born in Connecticut, June 10, 1710; educated at Harvard College (1727); engaged in mercantile pursuits; was deputy-governor of the colony (1767–68), and governor (1769–83). He was one of the most strenuous supporters of the Colonial cause during the war of the Revolution, and the well-known expression 'Brother Jonathan' is supposed to have had its origin from his name. Died at Lebanon, Conn., in 1785.

TRUMPET, Sea (*Triton variegatus*), a species of Gasteropodous shells, also named the Conch Shell, attaining the length of a foot, and common in the South Seas, where it is used by the natives as a trumpet. The S. T. is of a white color, streaked with brown and yellow. The outer lip is large and ribbed.

TRUMP'ETER (*Psophia*), a genus of *Grallatorial* or Wading Birds inhabiting S. America, and represented by the *P. crepitans* or Golden-breasted T. and other species. It is so named from the deep, hollow sound it emits. The T. is readily tamed, and becomes a household favorite. The head and neck are glossy black, the back is grey, and the wings and under parts black. The feathers of the back are long and silky. The body is relatively small when compared with the legs. The bill is vaulted towards the tip, which overhangs the lower jaw. The fourth, fifth, and sixth quills are the longest, and the tail and hinder toe are short.

TSCHI'TA, or CHI'TA, the capital of the Russian province of Transbaikalia, Siberia, on the river Ingoda, an affluent of the Amoor, at the base of the Yablonoi Mountains, 255 miles S.W. of Nertchinsk. It has great fairs, and is an important place of trade. Pop. (1873) 2598.

TUBIP'ORA, a genus of *Sclerodermic Corals*, belonging to the order *Alcyonaria* and family *Tubiporidæ*. It is represented by the *T. musica*, or organ-pipe coral, the 'pipes' of the coral representing the *thecæ* or coral-cups. No *septa* or internal partitions are developed. The coral itself is dark red in color, and the polypes are green, and have eight pinnate tentacles surrounding the mouth. The tubes or pipes of the coral are united by cross partitions of external nature, named *epithecæ*.

TUBULA'RIA, a well-known genus of Zoophytes or *Hydrozoa*, belonging to the order *Corynida*. *T. indivisa* is a familiar British species, the polypites being enclosed each in a straw-colored tube. The polypites of T. are provided with two sets of tentacles, one set being much larger than the other, and the generative buds being produced at the bases of the tentacles.

TUCKERMAN, Henry Theodore, a brilliant American author, born at Boston, Mass., in 1813; traveled extendedly in foreign lands and devoted his life to literary pursuits. The following are among his works: *The Italian Sketch Book*, *Rambles and Reveries*, *The Optimist*, *America and her Commentators*, and *Book of Artists*. The latter part of his life was spent in New York, where he died, Dec. 17, 1871.

TUFT'S COLLEGE, an American educational institution, at Medford, Mass., controlled by the Universalists. It was named in honor of Charles Tufts, who gave liberally towards its founding in 1853. It has fine buildings, and an endowment of more than a million dollars.

TUMKUR, the chief town of the district of the same name, in the State of Mysore, India, 43 miles N.W. of Bangalore. It is prettily situated, and surrounded by fruit-trees. Pop. (1871) 11,170.—The *district* of T., which averages 2500 feet above the sea, has an area of 3606 sq. miles; pop. (1871) 632,239. The crops are *ragee*, rice, cocoa-nut, and areca palms. The through traffic, in the hands of *lingayat* merchants, is considerable. The manufactures are cotton cloth, blankets, iron and steel, brass ware, and earth-salt.

TU'NING, the correct adjustment of the sounds of a musical instrument. Such instruments as the flute and horn are tuned without difficulty, as, if the pitch is altered by accident, it affects every note, and may easily be rectified by varying the length of the pipe. The notes of the organ and pianoforte, however, are unconnected and independent, and require careful adjustment from time to time. Stringed instruments, such as the violin and harp, require T. on every occasion on which they are used.

TUNSTALL, a town of the Staffordshire Potteries, England, 2 miles N.N.W. of Burslem, on the Grand Trunk Canal, has two churches, Christchurch and St. Mary's (1859) in First Pointed style, a town-hall, literary institution, &c. Earthen-ware and porcelain are largely manufactured, and there are also extensive iron-works, brick-fields, and collieries. Pop. (1811) 1677; (1871) 13,540; (1881) 14,244.

TURKISH BATH', a popular form of vapor bath, in which the patient, after being subjected for some little time to a considerable temperature in a vapor chamber, is vigorously rubbed down, and is then conducted through a series of cooling chambers until he has regained his normal temperature. All secretions and accretions are thus completely removed from the skin, which is left free to perform its functions healthily.

TÜRR, General Stephan, was born at Baja, in Hungary, 10th August 1825, became a lieutenant in the Austrian army in 1848, and served his first campaign in that year in Italy under General Radetzky. In January 1849, in obedience to the command of the revolutionary government of Hungary, he deserted to the Piedmontese, and was appointed Colonel of the Hungarian legion in the service of the latter. After the disaster of Novara he passed into the duchy of Baden, and served in the revolutionary army, which, however, was soon defeated. The Hungarians took refuge in Switzerland, the government of which aided many to emigrate to the United States. T., however, remained in London on a pension granted by the Sardinian government.

On the outbreak of the war with Russia, he went to the Crimea, took part as a volunteer in several battles, and received a commission from Colonel M'Murdo. Despatched in 1855 to the Danubian provinces to purchase horses, T. was arrested at Bucharest by the Austrians as a deserter, sent to Vienna, tried by a court-martial, and condemned to death. On the vigorous remonstrance of the British government his sentence was commuted to perpetual banishment. In the Italian war of 1859 he was a member of Garibaldi's staff, and in the war in Sicily his aide-de-camp, and before Palermo was appointed a general of division. T. was appointed by Victor Emmanuel in 1861 general of division in the army of Italy, and Commandant of Naples. In the same year he married the Princess Adeline Wyse Bonaparte. He resigned his command in 1864, and in 1869 returned to Hungary.

TURRETI'NI, is the name of a celebrated family of Genevan theologians, descended from a Gonfaloniere of Lucca, whose son, Francisco, had to take refuge in Geneva on account of his religion in 1579, and there died.—Benedictus T., his son, was born at Zürich, 9th November 1588, became pastor at Geneva in 1612, and professor of theology in 1618; represented the Genevan Church at the Synod of Alais in 1620, and in the following year concluded successfully an alliance between Geneva, the States-General of Holland, and the Hanseatic towns. He died 4th March 1631, leaving behind him many theological writings.—Franciscus T., son of the preceding, was born 17th October 1623, studied at Geneva, Leyden, Paris, Montaubon, and Nismes; became pastor, and in 1653 professor of theology in his native city, where he distinguished himself as an opponent of Amyraldism, and a staunch upholder of the decisions of the Synod of Dort, ultimately formulating his views in 1670 in conjunction with several Swiss divines, in the Klostic *formula Consensus*. He died 28th September 1687. His most celebrated work is the *Institutio Theologiæ Elenchticæ* (Geneva 1679–85).—Joannes Alphonsus T., his son, born 13th August 1671, abandoned the strict Calvinism of his ancestors in favor of a mode of thought resembling the contemporary Latitudinarianism of England, and endeavored to unite the various sections of the Protestant Church on a more liberal basis. It was chiefly owing to his efforts that the Genevan Church resolved in 1706 to make the signing of the Formula Consensus, drawn up by Francisco T., optional in the case of candidates for the pastorate. T. studied theology at Geneva and Leyden, visited the English universities,

where he formed several personal friendships, and spent some time in Paris. In 1697 he was appointed to the chair of ecclesiastical history at Geneva, from which in 1705 he was transferred to that of systematic theology. He died at Geneva, 1st May 1737. Of his numerous works the most important are *Cogitationes et Dissertationes Theologicæ* (Gén. 1703. 1737); *De Veritate Religionis Christianæ* (Gén. 1721–23); and *Hist. Eccl. Compendium* (Gén. 1700, 1734), often re-edited and translated. A very full account of the family is given in Herzog's *Realencyklopaidie*.

TUSCON, a city of Arizona, on the Santa Cruz River and the Southern Pacific Railroad. It is surrounded by an agricultural and stock raising country, and is the center of a considerable trade. Mining and the reduction of gold, silver, and copper ores, is carried on to a great extent in this section. It is the largest town in the Territory. Pop. 10,000.

TUSS'ER, THOMAS, best known as the author of *Five Hundred Pointes of Good Husbandry*, was born probably about 1515, at Rivenhall, near Witham, in Essex, England. From his rhyming autobiography it would appear that he served as a chorister first at Wallingford Chapel, and afterwards at St. Paul's, had the honor of being flogged if not instructed by Nicholas Udall at Eton, was attached for a number of years to the court, probably in the capacity of a musician, and at a later date kept a farm for some time in Suffolk. He probably died at London somewhere between 1580 and 1585. His will was privately printed in 1846 at Great Totham, Essex. The *Five Hundred Points* were first published in 1573, having been preceded by *A Hundred Good Points*, which had seen at least five editions since its appearance in 1557. In rude rustic rhymes, which have hardly a claim even to the name of verse, he inculcated a good amount of sound agricultural wisdom; and the book is still of interest for the glimpses it affords of the country life of the times, as well as for occasional passages of quaint and vigorous expression. The best editions are Dr. Mavor's (1812), Arber's (1870), and the English Dialect Society's (1878).

TUTICORIN, a town in the district of Tinnevelly, Madras, British India, near the S. extremity of the peninsula, 70 miles N.E. of Cape Comorin, and 513 S.W. of Madras by rail. Pop. (1871) 10,565. In the roadstead here, where ships ride safely 2½ miles from the shore, is conducted all the sea-borne trade of the district. In 1874–75 the exports were valued at £890,337; the imports at £406,453. There is a pearl-fishery in the neighborhood. T. has acquired increasing importance as the terminus of the S. Indian Railway. The Prince of Wales disembarked here from Ceylon in 1875, and proceeded N. in the first train that opened the line.

TWEED, WILLIAM MARCY, a notorious American politician, born in New York, April 3, 1823. In 1850 he entered politics, and, after holding various positions of public trust, was, in 1869, chosen grand sachem of Tammany Society. He then organized a political ring that robbed New York City of millions of dollars, and for a time held almost absolute political power in the State of New York. He was arrested and tried in 1872, and sent to the penitentiary. In a civil suit against him, the City of New York secured a verdict against him for $6,537,117,38. Died April 12, 1878.

TWICK'ENHAM, a town of Middlesex, on the W. bank of the Thames, is 10 miles W.S.W. of Hyde Park Corner, and has three stations on the South-Western Railway. St. Mary's, with an ancient tower but red-brick nave rebuilt in last century, contains Pope's monument, erected by Bishop Warburton in 1761; and other churches are Holy Trinity (1840; reseated 1877) and St. Stephen's (1874–76). The public buildings include a handsome town-hall, a library and reading-room, the Royal Naval Female School (1856), and the Metropolitan and City of London Police Orphanage, to which a new wing was added in 1878. The site of Pope's famous villa is covered by modern residences, and Orleans House was converted (1877) into a club; but Strawberry Hill, which its builder, Horace Walpole, pronounced 'the prettiest bauble, set in enamelled meadows with filigree hedges,' remains for a monument of Gothic in the 17th c. Pop. (1801) 3138, (1881) 12,479, an increase due to the number of new villas, which, reaching to Richmond Bridge, constitute T. a suburb of Richmond.

TWIGGS, DAVID EMANUEL, an American general, born in Georgia, in 1790; entered the army in 1812 and served with distinction in the war of that year, rising to the rank of brigadier-general; served in the Mexican war with equal distinction, and was presented with a sword by Congress, for his gallantry at the battle of Monterey. In 1861 he was dismissed from the service for having surrendered large quantities of government property to the authorities of the State of Texas, at that time in a state of rebellion against the national government. Died at Augusta, Ga., in 1862.

TYCOON (Chinese 'great lord'), or more correctly Shiogun, the title of the hereditary military despots who ruled Japan from 1192 to 1868, when the revolt of the Daimios swept away the last of the race and reinstated the Mikado in power. The T., who resided at Yeddo, did homage to the *roi-fainéant* at Miako, but ruled unrestrictedly. Hence Europeans carried away the impression that the T. was the real emperor and the Mikado a 'spiritual ruler.'

TYNG, STEPHEN HIGGINSON, D.D., a prominent American clergyman of the Episcopal church, born at Newburyport, Mass., March 1, 1800, and graduated from Harvard College in 1817. He entered the ministry in 1821, and after filling several pulpits, in 1845, became rector of St. George's, New York city, which position he held until recently. He was noted for his eloquence and catholicity of spirit, and succeeded in building up one of the strongest parishes of his denomination. He published *Lectures on the Law and Gospel* (1832), *Recollections of England* (1847), *The Prayer-Book Illustrated by Scripture* (1863), and others.

TYRCONN'EL, RICHARD TALBOT, EARL OF, born in Ireland in 1625, was in early life noted for his unscrupulous character, went to England at the Restoration, but was banished in 1677 for a conspiracy against Charles II. He was created by James II., on his accession, Earl of T., and was in 1686 made commander of the forces in Ireland. In January 1687 he succeeded Clarendon as Lord-Lieutenant, when he commenced a policy which in a few months completely overthrew the English ascendancy, every Protestant judge and magistrate being replaced by an Irish Catholic, and the army being completely purged of its Protestant officers and men, while several new regiments were formed of the most ignorant and bigoted recruits. When the Revolution took place, T., to gain time for maturing his plans, intrigued with William for two months, but at the beginning of 1689 hoisted a flag, embroidered with the words 'Now or Never,' from Dublin Castle, and in a short time had an army of 50,000 men. After the defeat on the Boyne, T. went to France, returned with French forces in the spring of 1691, but died at Limerick, July 14th, 1691. T. was married to Frances Jennings, a sister of the famous Duchess of Marlborough. His name was execrated in England, and is celebrated in the famous contemporary doggerel ballad *Lilli Burlero*, which 'whistled a deluded prince out of three kingdoms.'

TYROLIENE', a song accompanied with dancing, originally a Tyrolese melody. The T. introduced by Rossini in *William Tell* was the first of the kind which was not a Volkslied.

TYR'WHITT, THOMAS, son of Dr. T., canon of Windsor, was born in London, England, 29th March 1730, educated at Eton and Queen's College, Oxford, and elected to a fellowship at Merton. He was Clerk of the House of Commons (1761–67), was appointed curator of the British Museum (1784), and died 15th August 1786. Besides several treatises on classical subjects, T. wrote *Observations on Some Passages in Shakspeare, The Canterbury Tales of Chaucer* (1775–78), and *Poems supposed to have been written at Bristol in the 15th c. by Rowley and others, with a Preface and Glossary*, to which he added an appendix proving that Chatterton was the author. T. merits remembrance mainly for his services as an editor of Chaucer. He was the first who sought to expel from the biography of the poet everything that did not rest on documentary evidence; his collation of the Chaucerian MSS., though not particularly discriminating, was extremely laborious; his arrangement of the 'Tales' is excellent; and his 'Dissertation' and 'Notes,' with all their linguistic imperfections, are of great and enduring value for the interpretation and illustration of the 'Father of English Poetry.'

U.

UCAY'ALE, or UCAY'ALI, a great river of Eastern Peru, and one of the main affluents of the Amazon, of which it was formerly regarded as the head-stream. This honor is now accorded, however, to the Maranon, which, though shorter than the U., is twice as broad as the latter at their confluence. The U. rises in the mountains of Southern Peru, some of its feeders having their sources only 150 miles from the Pacific on the one hand, and 100 miles from Lake Titicaca on the other. In its upper course the U. is known as the Apurimac, and below the junction of the Mantara, in 12° S. lat., it is called the Tambo. After receiving the united waters of the Urubamba and Camisea in 9° S. lat., it becomes known as the U. Its entire course is about 1200 miles in length. The U. has been navigated by steamers for a great part of its course, and a steamer has penetrated by the Pachitea, a tributary on its left bank, to within 220 miles of Callao. The Apurimac is not navigable; but with this exception, and that of a fall on the lower Urubamba, the U. and its principal tributaries are most valuable highways to the heart of a region abounding in vegetable and mineral wealth.

UCHEES, a tribe of American indians, originally occupying that section of country watered by the Savannah river, but now located on a reservation in the Indian Territory, and constituting a part of the Creek confederacy.

U'DALL, NICHOLAS, the author of the first English comedy, was born in Hampshire about 1505 or 1506. Having received his education at Oxford, he chose the profession of a schoolmaster, and in 1534 he passed M.A. and obtained the post of headmaster of Eton, which he held till 1541, when he was dismissed. He afterwards resigned the vicarship of Braintree in Essex, which he had enjoyed along with his mastership; but he continued both to teach and preach, and in 1551 we find him admitted a prebendary of Windsor, and in 1554–55 appointed headmaster of Westminster school. He died in 1556. U.'s comedy of *Ralph Roister Doister*, which was probably written for the Eton boys, is a perfectly harmless piece, with a fair amount of vivacity in its execution and ingenuity in its plot, the hero being led into various awkward situations in the course of his suit to Dame Custance, partly by his own stupidity, and partly by the malicious suggestions of Matthew Merrygreek. The play is in rhyme, and has thirteen *dramatis personæ*.

Hallam notices that the choice of a city-gallant for 'hero' probably determined in some measure the prevalent subject of English comedy all through the Elizabethan age. The exact date of its composition has not been determined; it is quoted in the 3d edition of Sir Thomas Wilson's *Rule of Reason* (1553), but *not* in the 2d edition (1552). There is but *one* copy of U.'s comedy in existence, having no title-page; but it was probably printed in 1566. It is now in the library of Eton College. Of the other productions of U.'s pen it is enough to name *Flowres for Latin Speakynge* (portions of Terence done into English, 1533), translations of part of Erasmus's Paraphrase of the New Testament, and of Peter Martyr's tract on the Eucharist, and a few Latin letters and poems. See Wilson's *Arte of Logike* (1567), Bliss's edition of Wood's *Athenæ Oxonienses*, and the preface to Arber's reprint of *Roister Doister* (1869).

UE'BERWEG, FRIEDRICH, a German philosophical writer, born 22d January 1826, at Leichlingen in Rheinpreussen, studied philology at Göttingen under K. F. Hermann, and philosophy at Berlin under Beneke, and was successively a teacher at Elberfeld (from 1851), *privat docent* at Bonn, extraordinary (1862) and ordinary (1867) professor of philosophy at Königsberg, where he died, June 9, 1871.

U'KERT, FRIEDRICH AUGUST, a German historian born at Eutin, October 28, 1780, studied at Halle and Jena, and was successively inspector at the Gotha gymnasium and librarian at the ducal library. He died May 18, 1851. His chief writings are *Geographie der Griechen und Römer* (3 vols. Weim. 1818–46), and *Ueber Dämonen. Heroen und Genien* (Leip. 1850).

ULIASUTAI, the capital of the Chinese province of Shen-si, in Mongolia, on the line between Si-Ngan-Foo and the Russian frontier. It is an important depôt for the central Asiatic trade with China, and is defended by a garrison of Chinese. The pop., partly Chinese, partly Mongolian, is greatly increased during the fair by the Mongolian nomads, who pitch their tents in the vicinity. Owing to the occasional eruption of the Dzungar rebels from Urumsti, the Russians have failed to open a trade at U., though they tried repeatedly since 1868.

ULL'MANN, KARL, a Protestant theologian, born March 15, 1796, at Epfenbach in the Palatinate, studied theology at Heidelberg and Tübingen, and became extraordinary professor (1821) of theology at Heidelberg, and ordinary professor at Halle (1829) and at Heidelberg (1836). In 1828 U. started with Umbreit the *Theologische Studien und Kritiken*. In 1853 he was made a member of the 'Oberkirchenrath' of Baden, of which he became 'Direktor' in 1856 at Karlsruhe, where he died, January 12, 1865.

UMAN, a town in Russia, government of Kiev, on the Umanka, an affluent of the Bug, 110 miles S.S.E. of Kiev. It has five churches and a synagogue, and has an active trade in farm produce. (Pop. (1870) 15,393.

UMBEY'LA, a mountain-pass on the N.W. frontier of British India, leading N. from the district of Peshawar. The total length from the plain to the village of U., just beyond the crest, is about 11¼ miles. The pass only permits an advance in Indian file, and is everywhere commanded by mountains 4000 feet high. It is celebrated as the scene of the U. campaign of 1863. Continual raids had rendered it again necessary to attack the fanatical colony of Mohammedans—Pathans and Hindustanees—who had in 1858 been expelled from Sitana. It was expected to be a mere expedition of three weeks, but Sir Neville Chamberlain, at the head of 9000 men, was practically blockaded in the U. pass from October 18 to December 16. The English casualities were 847 killed and wounded, while the enemy are said to have lost 3000. At last they broke up, owing to internal dissensions, and the rebel settlement at Mulkah, the object of the expedition, was burned. See *The Indian Mussulmans*, by W. W. Hunter (1872).

UM'BONATE, a term in botany, meaning 'round,' with a projecting point in the center, like the boss or *umbo* of an ancient shield; as the pileus of many species of *Agaricus*.

UM'BREIT, FRIEDRICH WILHELM KARL, a German theologian, born at Sonneborn, near Gotha, April 11, 1795, studied at Göttingen, and in 1820 was appointed professor of philosophy at Heidelberg, where with Ullman he founded (1828) the *Theologische Kritiken und Studien*, and in 1829 was transferred to the theological faculty. He died April 26, 1860.

UMBRELL'A BIRD (*Cephalopterus ornatus*), a species of *Conirostral* birds, allied to the Fruit Crows, and so named from the peculiar form of the crest borne on the head. This crest is composed of long and slender feathers, which slope backwards when at rest. In the erect position the shafts of the feathers radiate like the ribs of an umbrella, completely covering the head, and forming a dome of a beautiful blue color. The breast bears a prominent 'tuft' of feathers, which appear to spring from a fleshy growth. The U. B. is a native of S. America, and has a local distribution. It attains the size of a crow, and its general color is a rich glossy black.

U'MRER, a town in the district of Nagpur, Central Provinces, British India, 28 miles S.E. of Nagpur. Pop. (1872) 11,394. It has a considerable trade, being chiefly noted for its cotton goods with embroidered silk borders. There are 1150 looms, employing twice that number of journeymen, who receive from £1 to £2, 10*s*. per month.

UNAU (*Cholœpus*), a well-known species of sloths or *Bradypodidæ*. Its fore feet are two-toed, and it has twenty-three pairs of ribs, this being the largest number found in the class *Mammalia*.

UN'DERCLAY, the bed of fire-clay which is almost invariably found beneath a seam of coal, and contains usually the peculiar fossil plant known as *Stigmaria*. It is now looked upon as the old soil in which the plants that formed the coal originally grew.

UNDERHILL, JOHN, born in England, and removed to America in 1630; and in 1637 led a force which helped to defeat, and break the power of, the Pequot Indians, by the destruction of their forts at Mystic, Conn. Banished from Boston, on account of his religious views, he visited England, but returned to America, and was governor of Exeter and Dover, in 1641. Died at Oyster Bay, Long Island, in 1682.

UNION CITY, a town of Pennsylvania, 23 miles S.E. of Erie by rail, has 4 churches, 3 banks, and 3 newspapers. It has 2 flour-mills, 2 carriage and several furniture and other wood works, and a large tannery. Pop. (1880) 2171.—U. is also a town of New Jersey. Pop. (1880) 5849.

UNION THEOLOGICAL SEMINARY, founded in New York, N. Y., in 1836. It has recently removed from University Place, to new and elegant buildings on Park Avenue, in the upper part of the city. It is the possessor of one of the finest theological libraries in America, and numbers among its instructors, such eminent scholars as Roswell D. Hitchcock, Philip Schaff, and William G. T. Shedd.

U'NIT. Every quantity consists of two parts, a numerical and a denominational part. The former is a number whole or fractional, the latter is the name of a thing of the same kind as the quantity to be expressed, and of a certain definite magnitude. Thus three feet, twenty pounds, and sixty seconds, are examples of quantities whose *numerics* are three, twenty, and sixty respectively. The denominational parts, which are necessary for the complete determination of the quantities, are the foot, the pound, and the second. When the numeric is *one*, the quantity is the standard quantity itself, and a quantity of which the numeric is unity is called a *unit*. In the examples given above, the foot, pound, and second are evidently the chosen units. We may use different units of the same kind, as when we speak of one yard, three feet, or thirty-six inches. Here all these express the same quantity, but the numerics are different, because different units are chosen.

To express in terms of one U. a quantity which is given in terms of another, we must multiply the original quantity by the number of times which the former U. is contained in the latter. Thus, since there are twelve inches in a foot, to express three feet in inches we must multiply the numeric by twelve, expressing the quantity as thirty-six inches. If any quantities of the same kind are to be compared, we must express both in terms of the same U. Many quantities can be expressed in terms of units of a different kind. In this case we make use of derived units. Thus taking the U. of length as a foot, areas are expressed in terms of the square whose side is unity, and volumes in terms of the cube whose side is unity. Velocities being expressed as so many feet per second involves the time U., and by defining U. velocity as U. space described in U. time, the mathematical treatment of velocities is much simplified. The measurement of force involves, besides the length and time units, another U.—that of mass; and in terms of these fundamental units all physical quantities by proper definition can be expressed.

UNITED STATES MILITARY ACADEMY, at West Point, on the west bank of the Hudson river; founded by Congress, in 1802. It gives its students a thorough military education in every branch of the art of war. Cadets are appointed by the Secretary of war, at the request of Congressional representatives, one being allowed to each district. Besides these there are ten appointments, which are controlled by the President. A four years' course of study is pursued.

UNITED STATES NAVAL ACADEMY, at Annapolis, Md., established in 1845. It provides a four years' course of study, and thoroughly educates for the naval service.

U'NITIES. The law of the *Three U.* of *Place*, *Time*, and *Action*, which ruled supreme in the classical period of the French drama, demanded that there should be no shifting of the scene from place to place, that the whole series of events should be such as might occur within the space of a single day, and that nothing should be admitted irrelevant to the development of the single plot. The introduction of the law was due to Richelieu, who, being, pleased by Mairet's *Sophonisbe*, in which the U. were observed, secured their formal enactment by the Abbé d'Aubignac in his *Pratique du Théâtre*. The restrictions were accepted by Corneille, Racine, and Voltaire, and in short continued in force till the rise of the Romantic school; though Corneille himself, in his essay on the subject, admitted that the unity of place at least had no support from Aristotle or Horace, whose authority had been claimed by D'Aubignac. For a time the validity and value of the law were matters of keen debate.

UNYANYEM'BÉ, a town in Central Africa, capital of a district of the same name, forming part of the country of Unyamnesi. The town of U. is an important settlement of Arab traders, for whose protection a garrison was maintained till lately by the Seyyid of Zanzibar. The houses are substantial, and the Arabs cultivate wheat, onions, and fruit-trees imported from the coast, which is 400 miles distant, The climate is very deadly to Europeans. Pop. 5000. The name U., according to Cameron, signifies 'country of the hoes,' *i.e.*, cultivated country.

UNYO'RO, a kingdom of Central Africa, included between Lake Albert Nyanza, the Victoria Nile, and the kingdom of Uganda. The southern and eastern portions are nearly a dead flat, covered with long grass and thick forests of small trees; but the northern and western districts possess a rolling surface and a park-like vegetation. The promontory of Usongara, on the Albert Nyanza, contains a vast salt-field, whence the surrounding lands are supplied. Cattle constitute the chief wealth of the natives, and ivory, which is very plentiful, is the principal trade medium. The climate is moist, and extremely unhealthy for Europeans. The capital, Mrooli, is situated at the junction of the Kafur River with the Victoria Nile, and is a large place, chiefly remarkable for the extreme filthiness of its streets and dwellings, the king's palace being no exception to the rule. See the works of Speke, Baker, and Stanley.

UPHAM, CHARLES WENTWORTH, born at St. Johns, New Brunswick, May 4, 1802; educated at Harvard College (1821) and Harvard Divinity School (1824); pastor of a Unitarian church at Salem, Mass.; compelled by a loss of voice to leave the ministry, in 1844; and afterwards devoted himself to literary pursuits. U. was elected to Congress (1853), and during his life held several lesser political positions. Among his works are *Lectures on Witchcraft*, *Life of J. C. Fremont*, and *Prophesy as an Evidence of Christianity*. Died at Salem, Mass., June 15, 1875.

UPHAM, THOMAS COGSWELL, D.D., born at Deerfield, N. H., in 1799; educated at Dartmouth College (1818) and Andover Theological Seminary (1821); was pastor of a church (Congregational) at Rochester, N. H. (1823–24); and in 1825 was made professor of mental and moral philosophy at Bowdoin College, which position he held for 32 years. Died in New York, N. Y., April 2, 1872. The following are among his most notable works: *Elements of Mental Philosophy; Life of Faith; Philosophical and Practical Treatise on the Will;* and *Method of Prayer*.

URAS'TER, a genus of *Echinodermata*, belonging to the order *Asteroidea*, and including the common star-fish of British coasts (the *Uraster rubens*), along with other species. The disc or body is small, and the arms usually five. The genus U. appears in a fossil condition first in the Oolitic rocks, and has persisted from that period to the present day.

URBANA, in Champaign Co., O., a railroad and trade center. Pop. 6252.

URFÉ, ANNE D', born in Le Forez of an ancient family in 1555, succeeded his father as bailiff of his native country (1574), and having formed an unhappy union with Diane de Château-Morand (annulled in 1598), took orders in 1603, and died in 1621 a canon of Lyon, vicar-general and prior of Montverdun. The five sonnets published from his *Diane* (1572), and the first book of his *Hymnes* (1608), leave us well content that the bulk of his poems have remained in manuscript.—HONORÉ D'U., his far more celebrated brother, was born at Marseille, Feb. 11, 1568, and studied at the College of Tournon. A brave adherent of the League, he was twice taken prisoner, in prison commencing his *Epistres Morales* (1598); in 1600 he married his brother's wife, his seven years' senior, that thereby her wealth might not be lost to the family. He fared no better than his brother, and, disgraced at court, retired to Piémont, whence in 1610 he issued part of his famous romance, *L'Astrée*. Modeled on Tasso's *Aminta* and the *Pastor Fido* of Guarini, this work, with its medley of prose and verse, of shepherds, knights, and enchanters, of history and mythology, had a great but now scarce intelligible success. La Fontaine tells how he read it in childhood, and came back to it when his beard was grey. Its second and third parts appeared in 1612–19, the two last were published posthumously by the secretary of d'U., who died at Villefranche in Piémont, June 1, 1625.

URMIA, a prosperous town of Persia, province of Azerbijan, in a fertile plain, 12 miles W. of Lake U., and 112 miles S.W. of Tabriz. The plain of U. is 50 miles long and 18 miles wide, and is populous and fertile, being well watered by the streams that descend from the Kurdish mountains. The town is girt with a mud wall and moat, and is surrounded for 12 miles round with gardens intermingled with melon, citron, and tobacco grounds. Pop. 35,000 (2000 Jews).

URMIA, LAKE OF, a salt lake in Azerbijan, Persia, 3900 feet above sea-level, with a length of 90 miles, a breadth of 30 miles, and a circumference of not less than 250 miles. It contains 6 large and about 50 smaller islands, and receives 14 streams, of which the largest are the Jagatu, Tatau, Sefichai, and Ajichai. It has no apparent outlet. The depth for 2 miles does not exceed 3 feet, the average depth is under 12 feet, the greatest depth ascertained 45 feet. The water is so largely impregnated with salt that no fish can live in it, and the banks are covered with a thick saline incrustation, from which a salt of beautiful transparency is obtained for commerce.

UR'QUHART, THOMAS, SIR, a Scottish author, best known as the translator of Rabelais, was born probably in 1605. He spent some time in foreign parts while as yet his 'brains were unripened for eminent undertakings,' visiting Spain, France,

Italy, and Sicily. In 1639 he was present in Scotland at the battle called the Trott of Turiff, and he shortly afterwards entered the service of Charles I., by whom he was knighted in 1641. On his father's death in 1642, he handed over his Scotch estates at Cromarty to trustees and went abroad; but in 1645 he was obliged to come back to Scotland to look after his affairs, and spent some years in a contest with his creditors. After the execution of Charles I. he joined the royalists, and in March 1649 he was declared a rebel by the Estates at Edinburgh. At the battle of Worcester he was taken prisoner, but he was afterwards released; and after a vain attempt to recover his rightful position in Scotland he escaped to the Continent, where he is said to have died in a fit of laughter at the news of the restoration of Charles II. His translation of the first two books of Rabelais, which appeared in 1653–64, and has been frequently reprinted, is a masterpiece in its style; but his other works are mainly interesting for the strange picture they afford of the writer's mental peculiarities. They were reprinted in one volume of 412 pages for the Maitland Club in 1834:—*Epigrams, divine and moral* (1641); *The Trissotetras, or the Most Exquisite Table for Resolving all Manner of Triangles* (1645); *Pantochronochanon, or a Peculiar Promptuary of Time*, tracing the descent of the Urquharts of Cromarty from the Creation (1652); *Ekskybalauron, or the Discovery of the Most Exquisite Jewel* (1652), written as a vindication of the honor of Scotland, and remarkable for the sketches of Chrichton and other eminent Scotchmen; and *Logopandecteision, or an Introduction to the Universal Language* (1653).

URUGUAY', a large river of S. America, rises in Brazil in 28° 40′ S. lat., only 100 miles from the Atlantic, and flows successively N.N.W., S.S.W., and S. till it unites with the Parana, to form the Rio de la Plata. The total length of the U. is about 900 miles, but shoals and rapids prevent large vessels from ascending it beyond Concordia, 200 miles from its mouth. It has a rapid current, and a volume nearly as great as that of the Parana, to whose turbid waters its clear stream presents a marked contrast at their junction. For nearly three-fourths of its length the U. separates the Argentine Republic from Brazil and the republic of U. See *The Paraná, the U., and La Plata Estuaries*, by J. J. Revy (1874).

USAMBA'RA, a country of E. Africa, lying between 4° 20′—5° 25′ S. lat., and 38° 20′—39° 10′ E. long. Its most southerly point is only 50 miles N.W. of the city of Zanzibar. U., which has been called 'the Switzerland of Africa,' is a mountainous country traversed by four parallel ranges running N. and S., and forming a part of the great coast-range which stretches from Abyssinia to Natal. The mountains, which are of volcanic origin, reach a maximum height of 6000 feet, and are usually clothed with trees to their summits. The country is well watered, the soil extremely fertile, the vegetation luxuriant, and the scenery of the loveliest description. A level plain 30 miles wide separates the mountains from the sea. Rice, maize, semsem seed, india-rubber, and tobacco are exported, and cotton of good quality is also indigenous, but is not cultivated. The country, lying on the shortest route to Lake Victoria Nyanza, is likely to rise in importance as the civilization of Eastern and Central Africa advances. See the *Proceedings of the Royal Geographical Society for* 1879.

V.

VAGI'NA, the membranous canal leading from the *uterus* or womb to the external genitalia. The V. in lower mammals, such as the *Ornithorhynchus*, opens into a *cloaca*, while in the kangaroos and other *Marsupialia* it opens into a canal named the *ugo-genital canal*, which receives the efferent ducts of the urinary organs. In higher quadrupeds the V. is distinct both from the *rectum* and the urinary ducts. In the human subject it attains a length of about 4 inches measured along its anterior wall and 6 inches measured on its posterior surface. It lies between the bladder and rectum; constricted at its commencement it becomes dilated towards its uterine end. The coats of the V. number three—an external or muscular layer, a layer of erectile tissue, and an inner or mucous layer. The mucous layer is thrown into folds or *rugæ*, which permit the distension of the canal in the process of *parturition*.

VAIGATCH', an island in the Arctic Ocean, 67 miles long by 26 miles broad, belonging to the Russian government of Archangel, separated by the V. or Yugor Strait from the Continent, and by the Kara Strait from Novaia Zemlia. Its northmost point is under lat. 70° 29′ W. V. is mountainous, especially in the middle. The vegetation is very poor; only on the southern declivities of the mountains are found the sorrel, wild onion, spoonwort, and forget-me-not. V. is rich in furred animals (red and blue foxes, reindeer, polar bears, and wolves), sea-birds, and sea-animals; and in summer the few Samoyedes who live permanently on V. are visited by bands of Russian, Syryane, and Samoyede hunters.

VAILLANT, Jean-Baptiste, Philibert, Comte, a French marshal, was born at Dijon, December 6, 1790, and after studying at the École polytechnique entered the army in 1809 as sub-lieutenant of engineers. He accompanied the grand army in the Russian expedition, and had the misfortune to be taken prisoner. From 1826 to 1830 he served as chief of a battalion in Algiers, and in 1832 he distinguished himself at the siege of Antwerp. In 1837 he returned to Algiers to superintend the fortifications, and in 1840 the reconstruction of the fortifications of Paris was entrusted to him along with Marshal Dode de la Brunerie. His last important achievement was the siege of Rome in 1849, which led to his receiving the marshal's baton in 1851. In 1854 he was War Minister. V. died at Paris, June 4, 1872.

VALE'RIUS MAX'IMUS, a Roman historian, wrote between 29 and 32 A.D. the extant *Factorum Dictorumque Memorabilium libri ix. ad Tiberium Cæsarem Augustum*, a large collection of historical anecdotes arranged under miscellaneous heads. The style of V. M. is forced and cumbrous; 'his Latinity,' said Erasmus, 'is no more like Cicero's than a mule is like a man.' Of this work we also possess two abridgements, by Julius Paris and by Januarius Nepotianus, published by Mai in 1828. The *editio princeps* of V. M. is by J. Mentelin of Strassburg, 1470. The best editions are by Aldus Manutius (Ven. 1534), Lipsius (Antw. 1585), Kempf (Berl. 1854), and C. Halm (Leip. 1865).

VALKYR'JUR [from old Norse *val-r* (Old High Ger. *wal*), 'corpses,' and *kjöra* (Dan. *kaare*, Ger. *küren*), 'choose'], in Northern Mythology are the beautiful 'maids of Odin,' goddesses of fate allied to the Norns. They numbered either nine or thrice nine, and in three bands went forth on horseback and clad in full armor, through air and water, over the wide world to *choose* for Odin the *Valr* or *Einherjar* ('single champions') worthy of Valhalla. At home in Valhalla the V. were the cupbearers of the Æsir and the Einherjar. The belief in the V. toward the close of the heathen period may be seen in the *Njalsaga's* description of Daurrud's vision on the day of the battle of Clontarf. Twelve women came riding through the air and entered a hillside. Through an opening Daurrud saw them there weave a web of men's entrails, with a sword for batten and arrows for shuttles. They sang the while a song: 'The web, the web of war is weaving for the fight: bloody shall be the fray; a king shall conquer: a mighty king and great chieftains shall be slain.' Another moment, and the web was slit in two. With one-half six of the V. hurried to the N. and vanished, while six sped southward with the other half. The incident has been finely told by the poet Gray in his ode, *The Fatal Sisters*.

VALLANDINGHAM, Clement L., an American politician, born at New Lisbon, O., in 1822, and began the practice of law in 1842. During the civil war, he ardently sympathized with the South, and in 1863, on account of treasonable utterances, was placed under arrest by order of Gen. Burnside. He was tried by court-martial, and sentenced to confinement during the war. Subsequently, by order of President Lincoln, he was sent beyond the lines; but, being dissatisfied with his treatment at the hands of the Confederates, he went to Canada, and while there was nominated for governor of Ohio, but was defeated by 100,000 majority. At the close of the war, he returned to Ohio, and was killed at Lebanon, O., June 17, 1871, by the accidental discharge of a pistol.

VALLE'JO, a city and seaport of California, on an arm of San Pablo Bay, and on the California Pacific Railway. It has a spacious harbor, a street railway, and several flour-mills, ship-yards, iron-foundries, machine-shops, and broom-factories. V. exports large quantities of grain, and supports six churches and one weekly and two daily newspapers. Pop. 5987.

VALPARAISO, in Knox Co., Ind., on the Wabash River. Three railroads pass through it and it is the termination of one. It is engaged in manufacturing lumber, staves, and woodenware; and is a shipping point for large quantities of grain, pork, and cattle. Pop. 8500.

VAL'PY, Richard, D.D., born on the island of Jersey, 7th December 1754; from the college of Valognes (1764–69) in Normandy proceeded to Southampton Grammar School, and thence to Pembroke College, Oxford. Ordained in 1777, he held a living at Bury-St.-Edmunds, and from 1781 to 1830 was head-master of Reading Grammar School, which he raised to a state of high efficiency. He died at Kensington, 28th March 1836. His Greek and Latin Grammars enjoyed in their day a great reputation; and his brother Edward V. (1764–1832), head-master of Norwich School from 1810, was also well known by his *Elegantiæ Latinæ* (1803; 11th ed. 1836), an edition of the Greek Testament (3 vols. 1810), and other works.

VAN BUREN. John, a son of Martin (See Buren, Martin Van, Chambers' En.), born at Hudson, N. Y., in 1810; educated at Yale College (1828), and became a lawyer; visited England with his father, who had been appointed Minister to that country; was made attorney-general of New York (1845) and for many years played an important part in the politics of his native state. Visiting Europe in 1866, he died upon the return voyage, Oct. 13, of that year.

VAN CORTLANDT, Philip, born in New York, N. Y., in 1749; studied land-surveying; entered the Continental army, at the outbreak of the Revolution; served on the frontier against the Indians (1778); participated in several of the engagements of the war; was promoted to the rank of brigadier-general for gallant services at Yorktown; and, after the close of the struggle, held several political positions, being a member of Congress from 1793 to 1809. Died at Croton, N. Y., in 1831.

VANDERBILT, Cornelius, born of humble Dutch parentage at Staten Island, New York, 27th May 1794, after a meagre education turned waterman at an early age, and from his seventeenth year ran a ferry-boat of his own between New York and Staten Island. Thus and as schooner-master he had acquired $9000 by 1817, when, entering the service of Thomas Gibbons, he became captain of a New York and New Brunswick steamer, and a hotel keeper at the latter place. In 1829 he started steamboats of his own upon the Hudson in 1851, opened the Nicaraguan steam line to California, and in 1855, having visited Europe two years before, established the Havre-New York service. His gift to the Government of a splendid steamer (1862) earned him the thanks of Congress, and subsequently engaging in railroad enterprise, he became the president of four railway companies. One of the wealthiest of the citizens of the U. S., he presented $1,000,000 to the Central (now Vanderbilt) University of the Methodist Episcopal Church, which, founded at Nashville, Tennessee, in 1872, and opened in 1875, possesses the four departments of theology, law, medicine, and philosophy, and has 26 instructors and over 300 students. V. died at New York, 4th January, 1877. William Henry, one of his sons, who was born in New Brunswick, 8th May 1821, is now probably the wealthiest citizen of the United States.

VAN DORN, Earl, a Confederate general, born in Mississippi, in 1821, and graduated from West Point in 1842. He served during the Mexican war, and was promoted for gallantry at Cerro Gordo, Contreras, and Chapultepec, and was wounded at the capture of the City of Mexico. At the beginning of the civil war, he entered the Confederate service, and soon rose to the rank of major-general. He was defeated at Pea Ridge and Corinth. He was shot in Maury Co., Tenn., May 8, 1863, by Dr. Peters, a gentleman with whom he had had differences of a private character.

VANI'NI, Lucil'io (or, as stands on his title-pages, Julius Cæsar), owes his celebrity for the most part to his martyrdom in the cause of free thought. Born at Taurisano, near Otranto, in 1584, he studied at Rome, Naples, and Padua, and having joined the order of the Carmelites, wandered through Switzerland, Germany, the Netherlands, and France, preaching, teaching, debating, and attracting attention by his vivacious ability. From the threats of the Inquisition he fled to England; but, though he was admitted a member of the English Church by Abbot, Archbishop of Canterbury, his conduct was too independent for a proselyte, and for no other reason he was actually imprisoned in the Tower. His defence of Christian doctrine was supposed to be a mere pretext for the presentation of the counter arguments, and on the strength of some dubious passages he was accused of heresy, and in due course sentenced as an atheist to have his body burned and his ashes scattered to the four winds. His execution followed on February 19, 1619, and his memory has been blackened by the representatives of his clerical foes. In philosophy V. was an ardent follower of Averroes.

VAP'EREAU, Louis Gustave, a French littérateur and editor, born at Orléans, April 4, 1819, won (1838) the prize for philosophy in a competition between all the colleges of France, became private secretary (1842) to Victor Cousin, whom he assisted in his *Pensées de Pascal*, and after spending some years as a professor in a college at Tours returned to Paris, where he passed *avocat* (1854), but devoted himself to literature. His best-known work is the *Dictionnaire des Contemporaines* (1st ed. 1858; new ed. 1870), which is equally admirable for the fulness of its knowledge and the felicity of its criticism. Another important work of V.'s is his *Dictionnaire Universel des Littératures* (Par. 1876).

VARANUS, an important genus of Lacertilia or lizards, including the 'Monitors,' so named from the belief that they warned persons of the approach of crocodiles by a peculiar hissing noise. The family *Veranidoe* are represented by some of the largest members of the lizard group. They are found in Asia, Africa, and Australia. The V. *Niloticus* of Egypt attains a length of from 4 to 6 feet, and the *Hydrosaurus sulcator* of the East Indian Archipelago occasionally 8 feet. The head and belly are covered with small scales, and the tongue is protrusible and fleshy. The teeth are lodged in a common groove, and there are no palatal teeth. The tail is compressed in the water-living species, and has a double row of carinated scales.

VARNHA'GEN VON ENSE, Karl August, born at Düsseldorf, 21st Feb. 1785, passed his boyhood at Hamburg, where his father practised as a medical man. He studied medicine himself, but with it philosophy and ancient literature, at Berlin, hearing Fichte and A. von Schlegel, at Halle Schleiermacher, Wolf, and Steffens. With Chamisso he edited a *Musenalmanach* in 1803, the year of his meeting Rahel, with whom, on removing to Tübingen in 1808, he maintained by voluminous letters the friendship of the past five years. Entering the Austrian army (1809), he was wounded at Wagram, and visited Paris as Bentheim's adjutant in 1810; but in 1812, on Austria's joining in the Russian campaign, quitted her service, and next year accepted a captain's commission in that of Russia. Exchanging a career of arms for that of Prussian diplomatist, he married Rahel, 27th Sept. 1814, and having attended the chancellor Hardenberg to the Vienna Congress, and thence to Paris (1815), settled at Karlsruhe as resident minister. In 1819, however, a variance with his government recalled him to Berlin, where, busy with literature and bearing the empty title of *Geheim Legationsrath*, he chiefly resided down to his death there, 10th Oct. 1858. —V.'s wife, Rahel Antonie Friederike Levin, the daughter of a Jewish merchant, was born at Berlin in June 1771. Ill-health, and love affairs made hopeless by the stigma of her birth, saddened her earlier years, though hers was brightest of all the Jewish *salons*, the focus then of Berlin's intellect. Courted by all the chief authors, artists, and statesmen of those disordered times, she exercised by her broad sympathies and liberal culture a lively influence on the German mind; but in 1806 she left Berlin to wander awhile in France and Germany. The death of Marwitz at the battle of Montmirail (1813) removed V.'s rival in her affections; and Rahel, turning a Christian less from conviction than convenience, entered upon a union of pure and singular happiness, closed by her death at Berlin, 7th March 1833.

VA'SA, a family which held the throne of Sweden from 1523 to 1654 in the persons of Gustaf I., Erik XIV., Johan III. (1568–92), Sigismund, Karl IX., Gustaf II. Adolf, and Queen Christina. The name of V. has in recent times been claimed by the son of the deposed king Gustaf IV. Adolf, Prince Gustaf of Holstein-Gottorp, who was born in 1799, and died at Pillnitz, August 4, 1877.

VA'SO-MO'TOR SYS'TEM, the name given to those nerve-filaments derived from the *Sympathetic system* of nerves and which are distributed to the walls of the arteries. The V.-M nerves thus exercise a very direct influence on the blood-circulation, and appear to originate in the gray matter of the *medulla oblongata*. Division of the V.-M. nerves of the abdominal blood-vessels causes dilatation, and effects comparable to those following severe internal hæmorrhage.

VASS'AR COLL'EGE, 2 miles E. of Poughkeepsie, New York, was founded in 1861 by Matthew Vassar (1792–1868) for higher female education. A fine brick edifice, 500 feet long by 200 wide, it was erected at a cost of $200,000, and opened in 1865, its studies embracing the regular course of first-rate colleges, and the students receiving B.A. and M.A. degrees. V. C. is probably the most thoroughly equipped institution in the world for the education of the female sex.

VAT'ICAN COUN'CIL, the nineteenth œcumenical council of the Catholic Church, assembled at Rome, 8th December 1869, 719 prelates out of the 1037 invited having answered the summons

of Pope Pius IX., and of this number 276 were Italians. Its decrees on the 'dogmatic constitution of the Catholic faith,' aimed at rationalism, were unanimously adopted, 24th April; but those on the 'dogmatic constitution of the Church of Christ,' *i. e.*, the decrees of Infallibility, received (13th July) only 400 'placets,' against 60 'placets' *juxta modum*, and 88 'non-placets,' the last including Cardinals Rauscher, Schwarzenburg, and Mathieu, with Bishops Dupanloup, Strossmayer, and Hefele. On July 18, 110 recalcitrant prelates stayed away, and thus the Infallibility became a dogma by 533 affirmative against 2 dissentient votes. The council, having achieved its principal object, was indefinitely postponed, 20th October 1870, owing to the outbreak of the Franco-German War. See the recent works of Manning, Newman, and Gladstone; and J. Friedrich, *Geschichte des Vaticanischen Konzils* (Bonn. 1877). See COUNCIL in Chambers' En.

VAUGHAN, CHARLES JOHN, D.D., was born at Leicester in England, in 1810. From Rugby, where he was a pupil of Dr. Arnold's, he passed to Trinity College, Cambridge, graduated B.A. in 1838, became a fellow in 1839, and proceeded M.A. in 1841. As Chancellor's classical medalist he was in 1838 bracketed with Lord Lyttleton. In 1841 he became vicar of St. Martin's, Leicester, and from 1844 to 1859 was head-master of Harrow School, was appointed vicar of Doncaster, and in 1869 succeeded Dr. Robinson as Master of the Temple. In 1879 he accepted the deanery of Landaff. Dr. V. stands in high esteem for his fine spirit, his tireless activity, and his generous devotion to all the duties of his profession.

VAUGHAN, HENRY, an English poet, distinguished by the self-adopted title of the 'Silurist' (i. e., the Silurian, or native of South Wales), was born at Newton, near Skethrock, about 5 miles from Brecon, in the year 1621–22. Along with his twin brother Thomas he entered Jesus College, Oxford, in 1638. Their university course was disturbed by the Civil War; both were through family tradition keen royalists. Thomas at least took part in the conflict as a combatant, and Henry was sufficiently prominent to be imprisoned by the Parliamentarians. From Oxford Henry appears to have proceeded to London. We next find him practising medicine at Brecon; and in 1647 he settled down at Skethrock as village doctor. Of his after life little is known except by inference. He appears to have sufferred from serious illness and a 'peevish, inconstant state of health;' and if Mr. Grosart's conjecture be right, he was bereaved of a youthful and deeply-loved wife. He survived till April 23, 1695.

VAUGHAN, ROBERT, D.D., was born in Wales in 1795, and received his theological education at Bristol College. After discharging the pastoral office for six years at Worcester, he was called in 1825 to an Independent Chapel in Kensington. From 1830 to 1842 he was professor of history in London University (now University College), and in 1842, on the removal of the Lancashire Independent College from Blackburn to Manchester, he was called to the presidency. Owing to failing health he resigned the post in 1857. He died at Torquay, June 15, 1868. V. was the principal projector of the *British Quarterly Review*, and editor from its commencement in 1845 till 1866.—His son, ROBERT ALFRED V., was a young man of rare promise and attainment, who died in 1857 at the age of twenty-two. Of the literary power that was in him he has left proof in *The Witch of Endor and other Poems* (1844), and *Hours with the Mystics* (2d ed. 1860). See *Robt. V., a Memorial* (Lond. 1869), and J. G. Rogers' *Pulpit Memorials* (Lond. 1878).

VEC'TOR, in mathematics, is any directed quantity, and was first introduced as a fundamental conception clearly distinguished from that of mere magnitude by Sir W. R. Hamilton of Dublin in his calculus of quaternions. The simplest manner in which to represent such a quantity which involves both direction and magnitude is by means of a straight line in space; then the V. may be regarded as a *stepping* from one extremity of the line to the other. It then follows as an immediate consequence that, if we take any three points, A, B, and C, the step from A to C is equivalent to the step from A to B and the step from B to C taken in succession, a truth which is expressed in quaternion language thus —the V. AC is equal to the sum of the vectors AB and BC. The addition of vectors is therefore exactly the same process that has long been recognized in the composition of velocities and forces.

VELELLA, or SALLEE MAN, a species of *Coelenterate* animals in some degree related to the jellyfishes, but distinguished by the diagonal crest or sail borne on the upper surface of the organism, and which is used as a means of propulsion. The bulk of the V. (of which *V. vulgaris* is the common species) consists of the rhomboidal *pneumatophore*, or float bearing the diagonal crest, placed vertically. A single polypite depends from the flat structure, with reproductive bodies and tentacles. The average length of the V. is about 2 inches long by 1½ inches in height. The organism is of a beautiful delicate blue tint.

VELLORE', the most populous town of the district of N. Arcot, Madras Presidency, British India, near the left bank of the Palar river, 80 miles W. of Madras by rail. Pop. (1871) 38,022. The old fort, which was formerly very strongly garrisoned, now contains only a single regiment of native infantry. Inside there is a pagoda, with beautiful stone carvings. A central jail has lately been built for 1000 long-term prisoners, where excellent carpets, rugs, &c., are manufactured. V. was the scene of a mutiny in 1806, when the native sepoys rose and murdered 113 European officers and soldiers. The outbreak was promptly suppressed. It was supposed to have been instigated by the sons of Tippoo Sultan, who had been confined in the fort as state prisoners since 1799. They were forthwith removed to the neighborhood of Calcutta, where the last survivor died in 1875. See Kaye's *History of the Sepoy Mutiny* (vol. i.).

VE'NUS' GIR'DLE (*Cestum Veneris*), the name given to a species of *Cœlenterate* animals, belonging to the highest group of that sub-kingdom—the division *Ctenophora*. It appears in warm seas as a long, band-like animal, attaining a length of from 2 to 3 feet. At night it is markedly phosphorescent.

VERA CUEVADE, a town of Spain, province of Almeria, on the Almanzora, near its entrance into the Mediterranean, 65 miles S.W. of Carthagena. It has an old Moorish castle, and a massive parish church, and produces pottery, wine, oil, &c. There are mines in the vicinity. Pop. 10,500.

VERCELL'I BOOK, a MS. volume discovered by Dr. Blume at Vercelli in 1823, which, in spite of its mutilated condition, is one of the most valuable relics of Old English literature, containing as it does not only six Saxon homilies, but also six poems which together amount to 7000 lines. A transcript of the poems, made by Dr. Blume for the Record Commission and still preserved by the Master of the Rolls, was printed as an appendix B to the report of the Commission for 1836.

VER'DEN, a town of Prussia, province of Hanover, on the river Aller, 2½ miles above its junction with the Weser, has a Gothic cathedral (1290–1490) and two other Evangelical churches, a Catholic church, and a gymnasium. V. has considerable trade, manufactures tobacco, cigars, and lucifers, and carries on brewing, fishing, and shipbuilding. Pop. (1875) 7669.

VER'GIL, POL'YDORE, a native of Urbino, studied at Bologna, and taking orders became chamberlain to Pope Alexander VI., who sent him to England to receive Peter's Pence (1501). In England he tarried fifty years, holding the rectory of Church Langton, Leicestershire (1503), and archdeaconry of Wells (1508), with prebends of Hereford and St. Paul's (1513), and returning to Italy in 1551, to die four years later at his native town. A slight dispute touching the priority of V.'s *Proverbiorum Libellus* (1498) to Erasmus' *Adagia* led to a life-long friendship between the authors; but V. is better remembered by his *De Inventoribus Rerum* (1499), edition of Gildas (1525), *De Prodigiis* (1526) and *Historia Anglica* (Basel 1534; 7th ed. Lond. 1651). As the first history where the facts and statements of earlier chroniclers were weighed and compared, and also by its choice Latinity, the last-named work merited the high value set on it by V.'s compeers. Sir Henry Ellis edited for the Camden Society the three last and first eight books of an old MS. translation of it in the British Museum (1844–46). See the Preface of Dr. W. A. Hammond's translation of the *De Rerum Inventoribus* (New York 1868).

VERGNIAUD, PIERRE VICTURNIEN, born at Limoges, 31st May 1759, settled as an advocate at Bordeaux in 1781, and on the outbreak of the Revolution was sent as a deputy to the Constituent Assembly, and afterwards to the National Convention, where his brilliant eloquence gave him a foremost place in the ranks of the Girondists. During the trial of Louis XVI. V. strove with all the power of his oratory to persuade the Convention to let the nation decide the fate of its former monarch, yet when it came to vote he pronounced for death. After the execution of Louis he became an avowed opponent of Robespierre and the party of the Mountain, was arrested 4th June 1793, and guillotined with twenty of his companions on the 21st of October following. See Barthe, *Les Orateurs Francais* (4 vols. Par. 1820); Vermorel, *Oeuvres de V., de Gaudet et de Gensonné* (Par. 1866), and Touchard Lafosse, *Hist. Parlementaire et Vie Intime de V.* (Par 1848).

VERMILYE, THOMAS EDWARD, D.D., LL.D., an eminent American clergyman, born at New York, N. Y., in 1803; educated at Yale College and Princeton Seminary; was pastor of churches in New York (Presbyterian), West Springfield, Mass. (Congregational), Albany, N. Y. (Reformed), and in 1839 was called to the pastorate of the Collegiate Reformed church in New York, which position he continues to hold (1885) as *emeritus*.

VERNE, JULES, a popular French story teller, was born at Nantes, February 8, 1828. After producing several comedies and operatic librettos he was fortunate enough to strike on the new vein of fictitious narrative which he has since worked with immense diligence and success. The main characteristic of his method is the continual employment of quasi-scientific material in the construction of his most fantastic and incredible creations.

The most remarkable of these productions, which are, however, altogether lacking in pure human interest, are *Twenty Thousand Leagues under the Sea*, *From the Earth to the Moon*, *Across Africa in a Balloon*, and *To the Center of the Earth*. Most of V.'s works have been translated into English and German.

VÉRON, LOUIS DESIRE, a French journalist, born in Paris, 5th April 1798, took his degree of M.D. in 1823, and in 1824 received the appointment of physician to the royal museums, but in 1828 renounced his profession and obtained a post on the staff of *La Quotidienne*. He afterwards founded the *Revue de Paris* (1829), was director or lessee of the opera from 1831 to 1835, and acted as editor of *La Constitutionnel* from 1835 to 1856. In this last capacity he at first strongly supported M. Thiers, but after 1849 he became a partisan of the Bonapartes, and in 1851 loudly applauded the *coup d'état*. In 1852 he was appointed officer of the Legion of Honor. He died Sept. 27, 1867.

VERPLANCK, GULIAN CROMMELIN, LL.D., a well-known American author, born at New York, N. Y., in 1786; educated at Columbia College (1801), and became a lawyer; in 1822 was made professor of the evidences of Christianity in the theological seminary of the Episcopal Church at New York; was member of Congress (1825–33), and held several other political positions. Died at New York, N. Y., in 1870. He published *Evidences of Revealed Religion*, *Discourses and Addresses*, &c.

VER'WICK, a town in the province of W. Flanders, Belgium, close to the French frontier, and 10 miles N.W. of Courtray by rail. It has large tobacco manufactures. Pop. (1870) 6758.

VESICULA'RIA, a genus of Lower *Mollusca* or *Molluscoida*, belonging to the *Polyzoa*, included in the group *Ctenostomata*. In this group, the cells of which the organism is composed arise from a common tube, and the cell mouths are terminal in position.

VETHAKE, HENRY, LL.D., born in Guiana, South America, in 1792, and came to the United States, when young; was educated at Columbia College (1808), and studied law; devoted his life to teaching mathematics, and was in this capacity, connected with the faculties of several American colleges. Died at Philadelphia, Pa., Dec. 16, 1866. He published *The Principles of Political Economy* (1838).

VE'TRO DI TRI'NA, or LACE GLASS, is a beautiful ornamental variety of glass made at Venice by enclosing small rods or threads of opaque glass within an object made of transparent glass so as to form a regular lattice pattern; and at each intersection an air bubble is shut in to give beauty and variety to the work.

VIARDOT-GARCIA, MADAME MICHELLE-PAULINE, an operatic singer, daughter of Manuel Garcia and younger sister of Madame Malibran, was born in Paris, July 18, 1821. She was a pupil of Liszt. She appeared as Desdemona in London in 1839, and proving herself a worthy successor to her great sister, soon obtained a European reputation. In 1840 she married M. Louis V., director of the Italian Opera in Paris. Perhaps her greatest successes were in Meyerbeer's operas, *Les Huguenots* and *Le Prophète*, as Valentine in the former, and as Fides in the latter. Her splendid voice had a compass of 3 octaves, and she shone in the concert-room, particularly in the rendering of Spanish songs, as conspicuously as on the stage.

VIAUD, THÉOPHILE DE, born in 1590 at Clairac in Agenois, came to Paris in 1610, and by his talents and sprightly wit secured the patronage of the young lords and choicest spirits of the day. With Balzac he made a tour in Holland, next entered the household of the Duc de Montmorency, and, after writing court ballets and masques, had a great success with the tragedy, *Pyrame et Thisbé* (1617). His fondness for satire made him enemies, who, coupling obscenity with the charge of heresy, procured his banishment (1619); but after a two years' exile in England he returned to Paris, and abjuring Calvinism followed the king on his campaigns of 1621–22. Persecution, however, soon recommenced, his attack on a single Jesuit rousing the hatred of the entire order; and for the filthy *Parnasse Satirique* (1623), published under his name but without his knowledge, if indeed he had any part in it at all, he was sentenced first to death (1625), then to perpetual banishment. Montmorency obtained him leave secretly to return to Paris, where at the age of thirty-six he died in the duke's hôtel, 25th September 1626. Odes, sonnets, epistles, and elegies, fresh but fantastic, make up with vigorous prose the bulk of V.'s works, which, unduly exalted in the 17th c., fell in the 18th into complete oblivion, from which they were rescued by the Romanticists. See the preface to Alleaume's edition of them (2 vols. Par. 1856), and Théophile Gautier's *Les Grotesques* (Par. 1844).

VI'BORG, a län of Finland, comprising that part yielded to Russia by Sweden by the treaties of Nystad (1721) and Abo (1743), lying S. of Karelia between the Gulf of Finland and the Lake of Ladoga. Area 1662 sq. miles; pop. (1875) 289,010 (88 per cent. Lutheran). The surface is mostly mountainous, but is marshy along the coast. The principal rivers are the Voxen and the Kymene. The inhabitants are occupied with agriculture, cattle-rearing, fisheries, and a coast transit-trade.

VIBRAC'ULA, the name given to the peculiar moving or vibratile filaments associated with the 'Birds' Head Processes' or *Avicularia* of the *Polyzoa*. Their nature is still undetermined, but some authorities believe them to be rudimentary *polypides* or *Zooids*.

VICTORIA, in Victoria Co., Tex., on the Guadalupe River, 45 miles from Indianola. It is at the junction of the Gulf, West Texas & Pacific and N. Y. Texas & Mexico railroads. It is surrounded by a fine agricultural region. Pop. 8500.

VIELLE', the old name for the hurdy-gurdy. It had usually five strings, and was tuned in various ways. It was a favorite and even fashionable instrument in France in the middle of the 18th c. It is still played by itinerant Savoyards in the streets of London and Paris.

VIER'SEN, a town of Rhenish Prussia, on the Nord-Canal, 5½ miles N.E. of Gladbach by rail. It has one Evangelical and one Catholic church, carries on dyeing and bleaching, and manufactures silks, half-silks, cottons, woollens, velvet, ribbons, lace, damask, leather, strawplait, and tobacco. Flax is extensively cultivated in the neighborhood. Pop. (1840) 4543; (1875) 19,705.

VIERZON-VILLE, a town of France, department of Cher, at the confluence of the Yèvre and the Cher, 50¾ miles S. of Orleans by rail. It has some important ruins. There are manufactures of porcelain, glass, parchment, leather, hosiery, and vinegar. Corn and vines are grown in abundance. Pop. (1876) 8995.—V.-VILLAGE, less than a mile distant, has manufactures of lace and wire-drawing. Its once famous steel-works and blast-furnaces are no longer in operation. Pop. (1876) 1058.

VIK'RAMADIT'YA, a great legendary Hindu monarch of India, whose capital was at Oojein in Malwa, and whose era, 57 B.C., is still current in Hindustan proper. He is regarded as the champion of the revived Brahminic faith, who drove away the Buddhists to Ceylon.

VILLEHAR'DOUIN, GEOFFROI SIRE DE, an old French warrior and chronicler, was born probably about 1155 or 1160, in the family château near Bar-sur-Aube. In 1180 he succeeded his father Guillaume as Marshal of Champagne under Thibaut, brother of Henri II. of France, and in 1201 he was one of the ambassadors despatched to Venice to make arrangements for the transport of the forces for the fourth crusade. On his return he found Thibaut dangerously ill, and it was soon his duty to act as guardian of the rights of the widowed princess, Blanche of Navarre. Having concluded a treaty in her name with the king, Philippe Auguste, he departed for the East, where he distinguished himself greatly in the conflict which finally placed Baldwin of Flanders on the throne of the Byzantine empire. Rewarded by the new monarch with extensive lands on the Hebrus, and appointed Marshal of Rumania, he repaid the favor by saving the crusaders from disastrous defeat near Adrianople in 1205. On his death in 1213 his nephew Geoffroi inherited his title and possessions. The narrative of the fourth crusade, by which V. ranks among the most important historians of the time, covers the period from 1198–1207, and consists largely of his own personal experience. Its principal defect is the prominence given to purely military matters.

VILLEMARQUÉ, THEODORE CLAUDE HENRI HERSART, VICOMTE DE LA, was born at Quimperté, in Bretagne, July 6, 1815, and having early distinguished himself by his works on the Breton language and literature, received the decoration of the Légion d'Honneur (1846), and was admitted a correspondent of the Berlin Academy (1851), and a member of the French Academy (1858). Besides other works, V. has published *Coutes Populaires des Anciens Bretons* (2 vols. 1842), *Poëmes des Bardes Bretons du Sixième Siècle* (1850), *Noticés des Principaux Manuscrits des Anciens Bretons* (1856), *La Legende Celtique en Irlande, en Cambuè et en Bretagne* (1859), *Myrdhinn ou l'Enchanteur Merlin* (1860). *Le Grand Mystere de Jesus* (1865), &c.

VILL'I, the name given to those projections of the mucous membrane of the intestines which constitute the openings of the *lacteals* or *absorbent vessels*. The *chyle* or product of digestion passes through the V., and is thence conveyed to the blood-system. The V. attain a length varying from a line to a line and a quarter, and may number from 50 to 90 per square line. The surface is coated with columnar epithelium, and internally are found blood-vessels and lacteal vessels.

VILL'ON, FRANÇOIS, one of the earliest French poets, was born at Paris in 1431. The few authentic details of his life which we possess are to be gathered from his verses, where he paints his own character in anything but favorable colors. His father was of humble rank, perhaps a shoemaker, and his mother appears to have

been a woman of fine character, full of piety and love for her son. He began to attend the University of Paris, but soon deserted the lectures for evil courses of all descriptions, of which he makes full confession in many of his poems, and of which the *Repues Franches*, though admittedly not by V. himself, give a too faithful picture. He was in fact the first of the long series of literary Bohemians of Paris, always living at other people's expense, and very often carrying his love for the goods of others, or his boisterous debauches, to such a length as to land him in prison. Some exploit of this sort led to his removing in 1456 from Paris to Angers, and before leaving Paris he composed a burlesque will in verse, known as his *Petit Testament*. Next year, however, he was again in Paris, where he was shortly afterwards imprisoned in the Châtelet, and would probably have been executed but for the intervention of Charles d'Orleans. Again in 1461 we find him in prison, this time at Meury-sur-Loir, and after his release he seems to have composed his *Grand Testament*. After this his life is almost a blank. He is stated on the authority of Rabelais to have retired towards the end of his life to Saint-Maixent in Poitou, and also to have visited England. He died about 1487.

His popularity may be judged from the fact that between 1489 and 1542 twenty-six editions of his poems were published in Paris and three in Lyon. The best modern editions are that in the *Bibliothèque Elzevirienne* (Par. 1854), that of M. Jannet (Par. 1867), and that of Paul Lacroix (Par. 1877). Several English translations have been made of his famous ballad, *Mais où sont les neiges d'Antan;* by Rosetti, among others. Swinburne has given us a version of the *Ballad of the Fair Armourer*, and an English translation of almost all his works has been privately printed by John Payne (1878). See Besant's *Early French Poetry* (1868), Campaux's *F. V., sa Vie et ses Œuvres* (Par. 1859), Nagel's *F. V.* (Berl. 1877), and Longnon's *Études biographiques sur F. V.* (Par. 1877).

VIL'NA, a government of West or White Russia, surrounded by the governments of Kovno, Vitebsk, Minsk, Grodno, and Suvalki. Area 16,411 sq. miles; pop. (1879) 1,073,539. The surface forms an undulating sandy plain, with hill country in the S. and E. Except in the N.E., where Devonian sandstone and limestone occur, the formations are Lower Tertiary, consisting of layers of clay-slates, gravelly sandstone, coarse limestone, lignite, and marl. The rivers run to the Niemen, which forms the W. and part of the S. boundary, and whose chief tributary, the navigable Vilia, crosses from E. to W. the middle of V., while the Disna flows N.E. to the Düna on the N. border. There are in V. 400 small lakes, and numerous wooded marshes. Pine-woods, in which are found the elk, bear, wolf, boar, and glutton, cover 38 per cent. of the surface. The cereal products are rye, oats, buckwheat, and barley, the trade in which, as in wood, pitch, tar, turpentine, honey, and wax, is chiefly in the hands of Jews. V. is traversed by the St. Petersburg-Warsaw Railway. —V., the capital, is situated on the Vilia, 42½ miles S.S.W. of St. Petersburgh by rail. It has narrow and irregular streets, 18 squares, 2 large suburbs, called *Antokolla* and *Rudaishka*, a ruined castle, an imperial palace, a theater, and the Ogiński Palace, which is now used as government buildings. Of its churches 35 are Catholic (including the cathedral, with the tomb of St. Casimir and the great churches of St. John and St. Peter), 6 Russo-Greek, and 3 Protestant. There are also a synagogue, a mosque, and several Catholic and 2 Greek monasteries. The university, founded in 1576, was abolished in 1832, when the greater part of its library, observatory, and scientific collections were removed to St. Petersburg and Kiev. The other chief educational institutions of V. are a Catholic Priest's College, a Lithuanian Orthodox Priest's College, a Rabbinical School, a classical gymnasium, and 3 Hebrew schools. It has also an antiquarian museum, a deaf and dumb institute, and an orphanage, several factories and distilleries and an active trade. V. is a very old town. In the heathen period it was a holy place. In 1387 Jagellon here introduced Christianity, and built the cathedral on the site of the old heathen temple. Pop. (1879) 88,693 (about 20,000 Jews).

VINAROZ', a town of Spain, province of Castellan, at the mouth of the Servol on the railway between Valencia and Tarragona, has some small trade in salt, oil, and wine, besides the building of fishing-boats. Pop. 9200. In November 1810 the French general, Musniers, defeated the Spanish army here.

VIN'EGAR EEL (*Anguillula aceti*), a small species of *nematoid* worm, inhabiting vinegar. The V. E. is one of the 'free' or non-parasitic nematoids. The young are produced in large numbers, and frequently by a process analogous to asexual methods of reproduction.

VINELAND, a town of New Jersey, 34 miles S. of Philadelphia by rail. With the exception of a few blocks in the main avenue, the town is laid out in fruit-farms of from 5 to 25 acres, and resembles a vast park. It has ten churches, numerous schools, flour, wood, machine mills, &c. There are 2 daily and 4 weekly newspapers. In 1880, 345,791 quarts of berries, 23,784 crates of peaches, and 1,210,188 lbs. of grapes were exported. Pop. (1880) 2519. V. was founded by Charles K. Landis in 1861 on 'temperance principles.' The cultivation of fruit forms the chief industry.

VINTON, ALEXANDER HAMILTON, D.D., an American divine, born at Providence, R. I., in 1807; educated at Yale Medical College, and practiced as a physician (1828–32); entered the ministry of the Episcopal church (1835); was rector of churches at Portland, Me. (1835–36), Providence, R. I. (1836–42), Boston, Mass. (1842–58), Philadelphia, Pa., (1858–61), New York City (1861–70), and in 1870 was called to the rectorship of Emanuel church, Boston. Died in 1881.

VINTON, FRANCIS, D.D., an American clergyman, born at Providence, R. I., in 1809; educated at West Point (1830), and pursued the calling of a civil-engineer for several years; entered the ministry of the Episcopal church (1838); was rector of churches in Providence and Brooklyn, and in 1855 became assistant rector of Trinity church, New York City. In 1869 he became professor of ecclesiastical law and polity, in the theological seminary of his denomination, at New York. Died at Brooklyn, N. Y. in 1872. He published *Manual Commentary on the General Canon Law of the Protestant Episcopal Church in the United States* and *Arthur Tremaine, or Cadet Life*.

VI'OLLET-LE-DUC, EUGENE EMMANUEL, born in Paris, 27th January 1814, studied ancient art at Rome and Taormina (1836–37) as well as in the cities of Southern France, and in 1840 was charged with the restoration of the exquisite Sainte Chapelle. Since then he has been employed on many of the historic monuments of Gothic art in France, notably Notre Dame (1846), and as engineer he assisted in the defence of Paris (1870–71), while playing in politics the part of a hot republican.

VI'RET, PIERRE, a Huguenot theologian, born at Orbe in the Pays de Vaud in 1511. Along with Farel he was one of the earliest preachers of the Reformation in Switzerland. Having held ministries at Geneva and Lausanne, he was summoned towards the close of his life by the Queen of Navarre to teach theology at Orthez, where he died in 1571.

VIRGULA'RIA, or SEA-ROD, a genus of *Cœlenterate* animals belonging to the order *Alcyonaria* and family *Pennatulidæ*. The V. are common round the British coasts. Each of these organisms consists of a colony of polypes, having a sclerobasic or axial coral. The tentacles are pinnate. *V. mirabilis* is a familiar species.

VIS'ON, a genus of *Carnivorous* quadrupeds included in the *Mustelidæ* or weasel family. Of this genus the Mink (*V. lutreola*) is the most familiar example. It inhabits N. Europe and N. America, attains a length of a foot and a half or rather less, and is of a brown color, marked with white on the chin and jaws. The V. swims with great ease, the feet being slightly webbed. The fur is very valuable.

VIZAGAPATAM (Visakha-patta-nam = 'the land of Visakha,' the Hindu Mars), the chief town of the district of the same name, in the Madras Presidency, British India, on the sea-coast, 380 miles N.E. of Madras, pop. (1871) 32,191. It stands at the head of a bay, on a small river, and carries on a large coasting trade. One of the points of the bay, called the Dolphin's Nose, rises 1500 feet above the sea. A British factory was settled here in the middle of the 17th c. There are special manufactures of cotton cloth, gold and silver embroidery, silver, ivory and horn ornaments. The *district* of V. occupies the strip below the E. Ghauts S. of Ganjam and the wild hill country behind; area 18,344 sq. miles; pop. (1871) 2,159,199. The crops are rice, oil-seeds, sugar-cane, and tobacco. The hills rise to the height of 5000 feet. Sugar is extensively manufactured under European superintendence. This tract formed one of the N. Circars occupied by the British in 1767, and includes the semi-independent States of the Jeypur Agency.

VIZIAN'AGRAM, a town in the district of Vizagapatam, Madras Presidency, British India, 35 miles N. of Vizagapatam, and 12 miles from the sea-coast; pop. (1871) 20,169. In the fort is the palace of the Rajah of V., a Rajput family which figures largely in the early history of the British in Madras.

VO'GEL, EDUARD, an African traveler, was born at Krefeld, March 7, 1820. His father was Johann Karl Christoph V., afterwards director of the public school at Leipzig, and his sister is known in German literature as Elise Polko. Devoting himself to astronomy, V. studied at Leipzig and Berlin, and in 1851 became assistant to Hind in London; but in 1853 he was called to take command of an expedition from England intended to co-operate with Barth and Overweg in Central Africa. In January 1854 he reached Lake Chad, in December joined Barth near Zinder, and in 1855 pushed S. to Yacoba and the Benue. Before the close of the year he entered the kingdom of Wadai, where in the early part of 1856, probably on 8th February, he was brutally massacred near Abeshr. See his sister Elise Polko's *Erinnerungen an Einen Verschollenen* (Leip. 1863).

VOGT, CARL, a German scientist of most pronounced radicalism, born at Giessen, July 5, 1817, studied medicine, but subsequently devoted himself to scientific pursuits. He has published many works, all of which advocate the grossest materialism.

VOI'TURE, VINCENT, born at Amiens in 1598, studied at Paris, and by a copy of verses (1614) securing the patronage of Gaston d'Orléans, became comptroller of that prince's household. Through a fellow-student, the Comte d'Avaux, and his own gay wit, he gained an entrée to the choicest Parisian circles, notably to the Hôtel de Rambouillet, of which he was looked on as the laughing, as Balzac its serious, philosopher; and in 1634 he was chosen one of the early members of the French Academy. Despatched to Tuscany (1638) to announce the Dauphin's birth, he passed on to Rome, there to receive the membership of the Academia dei Umoriste; and on his return became the king's maître d'hôtel (1639), from this and from other appointments drawing a revenue of 18,000 livres. Gambling his only passion, he lived on gallant and frivolous to the last, dying in Paris, 26th May 1648. The rondeaux of V. are the best among their kind; of his sonnets one gave rise to the great literary feud of Jobelins and Uranistes; his *Lettres* (ed. by Roux, 1856) were regarded as models of the epistolary art. Yet somehow they all have lost their point; the charm and prettiness ascribed to them can no longer be seen, though it is allowed that modern French prose owes much of its present facility to V.

VOORHEES, DANIEL W., an American statesman, born in Indiana, in 1828; educated at Asbury University (1849) and, studying law, was admitted to the bar; soon became prominent as a leader of the Democratic party in his state; was in congress (1861–65) and again (1869–71); was appointed U. S. Senator in 1877, to fill an unexpired term, and was elected to that position in 1879, which he now (1885) holds.

VOR'TIGERN, a British prince who flourished in the 5th c. According to Gildas, Bede, Ethelwerd, and the *Old English Chronicle*, he invited Hengist and Horsa to come over and assist him against his enemies the Picts and Scots. Nennius, on the other hand, represents the German chiefs as exiles who came to the island unasked. Whichever form of the story be true, it seems certain that after a short time the new-comers, reinforced by fresh bands of their countrymen, turned against V., and wrested from him the Kentish territory. Nennius is the first to bring 'the beautiful daughter of Hengist' on the scene. He does not, however, name her. This is first done by Geoffrey of Monmouth (12th c.), who in the main follows and expands the version of Nennius. Geoffrey calls her Rowena, or, according to some MSS., Ronwen and Ronwenna; and he is the first to tell the familiar legend of the lady making a low curtsy to V. and saying, as she offered him a cup of wine, 'Lauerd King, wacht heil,' and how the 'devil' made him so enamored of the lovely pagan that he married her that same night. There is something like unanimity in the chroniclers regarding V.'s character. He was at once tyrannical and lascivious; and monkish indignation (as expressed in the legend of St. Germanus) affirms that he was finally destroyed by fire from heaven. We may at least safely presume that V. came to a violent end, probably in conflict with the heathen adventurers who had established themselves in his dominions.

VUL'CAN, the name given to the intra-mercurial planet which M. Lescarbault believed he observed crossing the sun's disc on March 26, 1859. In 1856 Leverrier had pointed out that to account for certain irregularities in the motion of Mercury it was necessary to assume the existence of matter between the sun and that planet, and Lescarbault's discovery was hailed as corroborating this theory. The subsequent but unsuccessful endeavors to observe another transit of this body cast grave doubts upon the whole question of existence, and until lately Lescarbault's object was supposed to have been a comet. In 1876, however, Porro and Wolf of Zurich recorded a similar transit; and on July 29, 1878, during the total solar eclipse, which was visible from America, a bright object was observed near the sun by two independent observers, Professor J. C. Watson and Professor Lewis Swift, who are both agreed that what they observed was a planet. Gaillot has compared the position of Watson's planet with the various orbits which Leverrier had assigned as the most probable orbits of Lescarbault's planet, and has shown it to be compatible with one of these. The period of revolution Gaillot fixes at 24·25 days, and gives reasons for believing the inclination of the orbit not to exceed 7°. From recent researches it would appear that earlier observations are on record than those of Lescarbault, notably one by De Vico in July 1837, and one by De Cuppis in October 1839.

W.

WAAG'EN, GUSTAV FRIEDRICH, a writer on art, was born at Hamburg, 11th February 1794, and educated in Silesia, whither his father, a painter of some note, removed in 1807. As a volunteer he made the campaigns of 1813–14, but subsequently turning to art under the influence of Ludwig Tieck, to whom he was related, he studied at Breslau, Dresden, Heidelberg, and Munich, and after traveling in the Netherlands, published *Ueber Hubert and Johann van Eyck* (Bresl. 1822). He traveled with Schinkel in Italy in 1824, and was appointed director of the picture-gallery of Berlin in 1830. His subsequent life was spent mainly in art tours through Europe, in which he visited France, England, Spain, St. Petersburg, &c. He died at Copenhagen, 15th July 1868.

WABASH COLLEGE, an educational institution, at Crawfordsville, Ind., controlled by Presbyterians. It was founded in 1833, and has four buildings and a fine library.

WACO, in McLennan Co., Texas, on the Brazos River, 95 miles N. by E. of Austin. It has two railroads, and is engaged in agriculture, stock raising, wool growing, and manufacturing. Pop. 9000.

WADDELL, JAMES IREDELL, a Confederate naval officer, born at Pittsboro', N. C., July 13, 1824, and entered the U. S. navy when 17 years of age. At the outbreak of the civil war, he resigned his position and entered the Confederate service. In 1863 he was sent to Europe by the Confederate States, and in 1864 took command of the Shenandoah, which had formerly been named the Sea-King, and had been engaged in the British merchant service, and which had been bought by the Confederacy from a Liverpool merchant, and fitted out for privateering. After putting into Melbourne, Australia, for repairs, he sailed upon a thirteen-months' cruise, during which time he succeeded in destroying 32 U. S. merchant vessels and property to the value of $6,000,000. At the close of the war, Waddell sailed to Liverpool, and delivered the Shenandoah over to the British government. Shortly after he returned to the U. S.

WADD'ING, LUKE, born at Waterford in Ireland, 16th October 1588, after studying theology at the Lisbon Jesuit Seminary, entered the Franciscan order (1605), and became professor of divinity in the University of Salamanca. As chaplain to an embassy despatched to treat concerning the doctrine of the Immaculate Conception, he came in 1618 to Rome, and settling there, founded the Irish Franciscan College of St. Isidore (1625), acted as papal councilor in the great controversy with the Jansenists, whose tenets he shared at first but presently renounced, and was procurator of his order (1630–34) and vice-commissary (1645–48). He refused a cardinal's hat, and died at Rome, 18th November 1657.

WADD'INGTON, GEORGE, D.D., son of Rev. George W., vicar of Tuxford, Nottinghamshire, England, was born 7th September 1793. A brilliant university career at Cambridge was rewarded by a fellowship in Trinity College; and after several years of foreign travel he received the vicarage of Marsham in Yorkshire. In 1840 he was made Dean of Durham, and in the following year Warden of Durham University. He died 20th July 1869.

WADE, BENJAMIN FRANKLIN, an American statesman, born at Springfield, Mass., Oct. 27, 1800. When 21 years of age he removed to Ashtabula Co., Ohio, and seven years later was admitted to the bar, and began to practice law, in which profession he soon rose to distinction. After holding various political positions in his own state, he was, in 1851, elected U. S. Senator, which position he continued to fill until 1869. He was an earnest opponent of slavery, and a hearty supporter of Mr. Lincoln's administration during the civil war. Upon the assassination of Mr. Lincoln, he became acting Vice-President of the U. S. Died March 2, 1878, at Jefferson, O.

WADSWORTH, James Samuel, an American general, born at Geneseo, N. Y., Oct. 30, 1807, and educated at Hamilton and Harvard colleges. He studied law, but never engaged in the practice of that profession. At the outbreak of the civil war he entered the Union service, and was present at first Bull Run. In 1861 he was made brigadier-general of volunteers, and, in 1863, commanded a brigade at Gettysburg, where he distinguished himself by his gallantry. He was shot, May 6, 1864, in an engagement near the Rapidan, and died two days afterwards.

WAIN'WRIGHT, Jonathan Mayhew, D.D., D.C.L., a bishop of the American Episcopal Church, born at Liverpool, England, Feb. 24, 1792, of American parents, with whom he came to the U. S. in 1803. He graduated from Harvard College in 1812, and entered the ministry in 1816. He was rector of churches in Hartford, Conn., New York City, Boston, Mass., and in 1852, became Bishop of New York. He was a learned scholar and eloquent preacher. He published *Music of the Church* (1828), *The Pathways and Abiding Places of Our Lord* (1851), *The Land of Bondage, a Journal of a Tour in Egypt* (1852), and *Our Saviour with Prophets and Apostles* (1850). His life has been written by Rev. John N. Norton. Died in New York, Sept. 21, 1854.

WAKE'FIELD, Gilbert, a classical scholar and theologian, was born February 22, 1756, in the parsonage at St. Nicholas of Nottingham, England, and in 1776 became a Fellow of Jesus College, Cambridge. After holding two curacies in the Church of England, he obtained (1779) a classical tutorship in a dissenting academy, and in 1786 he formally withdrew from his connection with the Established Church. For two years (1799–1801) he was imprisoned in Dorchester jail for a seditious libel contained in his *Reply to some Parts of the Bishop of Llandaff's Address to the People of Great Britain* (Lond. 1798), and a few months after his release he died, September 9, 1801.

WAKEFIELD, a town of Middlesex Co., Mass., on the Boston & Maine Railroad, 10 miles from Boston. It is extensively engaged in the manufacture of iron castings, rattan goods, boots and shoes. Pop. 5548.

WAL'FISCH BAY is situated on the S.W. coast of Africa, in 22° 50′ S. lat. It possesses safe anchorage, but is without fresh water, and its shores are barren and desolate in the extreme. Fish are very abundant, and it was formerly a favorite whaling-ground, whence its name. Valuable deposits of copper and lead exist some distance inland, but are not yet worked. The climate of W. B. is almost rainless, and is fairly healthy except in the hot months, when low fever prevails. In 1878 the coast-line between the Cunene and Orange rivers, a distance of 720 miles, was annexed to Cape Colony, the English flag being hoisted at W. B. The strip of land thus taken possession of is from 13 to 18 miles broad.

WALKER, Amasa, LL.D., born at Woodstock, Conn., in 1799; engaged in mercantile pursuits at Boston, Mass.; was prominently connected with the anti-slavery movement; held several political positions in Massachusetts; was a member of Congress (1862–63); was for several years professor of Political Economy at Oberlin College, O.; and during the latter period of his life was lecturer on political economy at Amherst College, Mass. Died Oct. 29, 1875.

WALK'ER, Frederick, an English artist, was born in Marylebone, 24th May 1840, studied at the British Museum and at 'Leigh's,' and by the time he entered the Academy (1858) was earning a livelihood by designing wood-engravings. His beautiful drawings in *Once a Week* brought him into notice. Engaged by Thackeray to help him out with his illustrations for the novels, he was the 'F. W.' who gave to the crude designs of the humorist their charm of spirit, finish, and grace. He drew much for the Messrs. Dalziel Brothers, but with Miss Thackeray's *Village on the Cliff* ended his work for the engraver. He now devoted himself to painting, both in oil and water-colors. In the first his works were 'The Lost Path' (1863), 'Bathers' (1867), 'Vagrants,' and 'In the Glen, Rathfarnham Park' (1868), 'The Old Gate' (1869), 'The Plough' (1870), 'At the Bar' (1871), and 'The Harbor of Refuge' (1872). His water-colors comprise 'Spring' (1863), 'The Bouquet' (1866), 'Fisherman and Boy' (1867), 'Streams in Inverness-shire' (1868), 'Wayfarers' (1870), 'Girl at a Style,' and 'The Housewife' (1871), 'The Escape' (1872), 'The Village' (1873), 'The Rainbow' (1874), and 'Fishmonger's Shop' (1875). He died at St. Fillan's, Perthshire, 4th June 1875. An exhibition of 150 of his works took place in 1876.

WALKER, James, D.D., an American clergyman, born at Woburn (now Burlington), Mass., in 1794; educated at Harvard College (1814); studied theology and entered the ministry of the Unitarian church; was pastor of a church of that denomination at Charlestown, Mass. (1818–38); was professor of moral and intellectual philosophy at Harvard (1838–53), and was president of that institution (1853–60). Died at Cambridge, Mass., Dec. 23, 1874. Besides sermons and editions of several works as text-books, he published *A Memoir of Daniel Appleton White* and *A Memoir of Josiah Quincy*.

WALKER, James Barr, D.D., an American clergyman, born at Philadelphia in 1805; educated himself while working, first as an operative in a factory, and then as a printer; engaged in teaching; studied law; completed his education at Western Reserve College, O. (1831); engaged for a time in journalism; was licensed to preach by the Congregational church; and lectured at Oberlin College and the Chicago Seminary on the relations between science and revealed religion. He is the author of numerous works, among which the following may be mentioned: *God Revealed in Creation and in Christ, Philosophy of Skepticism*, and *Philosophy of the Divine Operations in Human Redemption*.

WALKER, Robert James, an American statesman, born at Northumberland, Pa., July 19, 1801, and graduated from the University of Pennsylvania in 1819. In 1821 he was admitted to the bar, and in 1826 removed to Natchez, Miss., where he became a successful lawyer. In 1836 he became U. S. Senator, in which position he attained highest distinction for his legal learning and masterly eloquence. During the civil war he was a strong supporter of the government, and in 1863–64 was its financial agent in Europe, where he was successful in negotiating large loans. At the close of the war he resumed the practice of law at Washington, D. C., where he died Nov. 11, 1869.

WALKER, William, an American adventurer, born at Nashville, Tenn., in 1824; became a physician and afterwards a lawyer; was for a time engaged in editorial pursuits, first at New Orleans and then at San Francisco; in 1853 led an expedition for the conquest of Northern Mexico, which after some trifling successes, surrendered to the United States authorities; was brought to trial and acquitted; in 1855 led an expedition to Nicaragua, with the intention of conquering that country; gained two battles and caused himself to be made president; in 1857, when imperilled by a powerful insurrection, surrendered to a United States man-of-war, and was returned to New York; attempted two other expeditions of like character, but was prevented by the U. S. government; in 1860 sailed from New Orleans to Honduras, where, after some temporary successes, he was seized, court-martialed, and shot, Sept. 12, 1860.

WALLA WALLA, in Walla Walla Co., Washington Territory. It is surrounded by a farming, grain, and stock raising district, and carries on an extensive trade with the surrounding country. Pop. 4000.

WALLINGFORD, a town in New Haven, Co., Conn., 13 miles N. of New Haven. It is largely engaged in the manufacture of Britannia ware. Pop. 6000.

WALLACE, Lewis, born in Indiana, in 1827; served with distinction in the Mexican, and also in the civil war. He presided at the court-martial which tried Pres. Lincoln's assassins, and was (1884), U. S. Minister to Turkey. He published *The Fair God* (1873) and *Ben Hur* (1880).

WAL'TON, Brian, born in 1600 at Seymour in Cleveland, Yorkshire, England, studied at Magdalen College and Peterhouse, Cambridge, and after graduating (1619) kept school in Suffolk. He became rector of St. Martin's Ongar, London, and Sandon in Essex (1635), chaplain to the king and a prebendary of St. Paul's (1639), but was sequestered from all these offices by the Parliament in 1642, having rendered himself obnoxious to the Puritans by his *Treatise on the Payment of Tithes and Oblations in London* (1641). Taking refuge in Oxford, he there designed the famous Polyglot that bears his name, and which in spite of infinite disturbances for his loyalty he completed in four years' time. At the Restoration he was rewarded with the bishopric of Chester, but died in London, 29th November 1661.

WALWORTH, Mansfield Tracy, an American novelist, born at Saratoga in 1830, and graduated from Union College in 1849. He published *Hotspur*, *Stormcliff*, and *Warwick*, all of which were brilliant literary productions, and had large circulations. He was shot and killed by his son Frank, at the Sturtevant House, New York, June 3, 1873. The shooting was the result of domestic differences between Walworth and his wife.

WALWORTH, Reuben Hyde, LL.D., born at Bozrali, Conn., in 1789, was largely self-educated; was admitted to the bar in 1809, and began the practice of that profession at Plattsburg, N. Y.; participated in the war of 1812 with the rank adjutant-general of the state troops; was member of congress (1821–23), one of the judges of the circuit court (1823–28), and state chancellor (1828–48). W. ranked high as a jurist, and his decisions are always good authority. Died at Saratoga, N. Y., in 1867.

WARD'LAW, Elizabeth Halket, Lady, a Scottish poetess, daughter of Sir Charles Halket of Pitferrane, was born April 1677, married Sir Henry Wardlaw of Pitreavie in 1696, and died in 1727. She is the authoress of the fine ballad of *Hardyknute*, which was long handed about in MS. as a genuine product of an-

tiquity, and was printed as such by Ramsay in his *Evergreen* 1724). The secret of the authorship was first disclosed by Percy in his *Reliques of Ancient English Poetry* (1755). Lady W. also touched up the ballad of *Gilderoy;* Kirkpatrick Sharpe was 'almost persuaded' that she wrote 'the grand old ballad of *Sir Patrick Spens,*' and finally Dr. Robert Chambers, in a controversial pamphlet, ascribed to her the fabrication of most of the 'historical' Scottish ballads.

WARE, in Hampshire Co., Mass., on the Ware River Railroad, about 21 miles from Springfield. It is largely engaged in cotton and woollen manufactures. Pop. 5500.

WARE, HENRY, D.D., an American divine, born at Sherburne, Mass., in 1764; educated at Harvard College (1785), and entered the ministry of the Congregational Church; was pastor of the First Church of Hingham, Mass. (1787–1805); and was professor of divinity at Harvard from 1805 until his death at Cambridge, July 12, 1845. He was one of the leaders of the Unitarian movement, which resulted in the division between that body and Evangelical Congregationalists. Among his works may be mentioned *Letters to Trinitarians and Calvinists;* and *An Inquiry into the Foundation, Evidences, and Truth of Religion.*

WARE, HENRY, JR., D.D., son of the preceding, born at Hingham, Mass., in 1794; educated at Harvard College (1812); entered the ministry of the Unitarian Church and was pastor of a church in Boston (Second Unitarian) from 1817 to 1830; became professor of pulpit eloquence at Harvard in 1829, which position he held until 1842. Died at Framingham, Mass. in 1843. He was one of the most active organizers of the Unitarian body. He was the author of *Hints on Extemporaneous Preaching* and *Life of the Saviour.*

WAR'HAM, WILLIAM, born about 1450 at Church Oakley, Hampshire, England, from Winchester was elected scholar of New College, Oxford, of which he became a fellow in 1475. At Oxford he commenced the study of law, and having taken his LL.D., repaired to London (1488) to practise in the Court of Arches. His sober abilities were brought by Archbishop Morton under the notice of Henry VII., who attached him to Poynings' embassy to the court of Burgundy (1493, the probable year of W.'s ordination). His inculent exposure on this occasion of Duke Perkin's claims led to his rapid advancement, and he became precentor of Wells, Master of the Rolls (1494), Archdeacon of Huntingdon (1496), Bishop of London and Lord Chancellor (1502), and Archbishop of Canterbury (1503). The popular minister of an unpopular king, W. was charged with divers important missions, but as an opponent of the marriage to Catherine enjoyed less favor with the Eighth than the Seventh Henry, and in 1515 gladly resigned the Great Seal to Wolsey, having labored to get quit of it for several years. With Wolsey he always stood on amicable terms, but his chosen friends were the scholars of the New Learning, Colet, Grocyn, Linacre, and Erasmus, all of whom he helped to preferment, which Erasmus repaid by the noble preface to his *St. Jerome.* From lettered retirement W. was called in 1529, weighed down with age and bodily infirmities, by the burning questions of the royal divorce and royal supremacy. On the first he sided passively with Henry, on the second yielded, presenting the submission of Convocation to the King three months before his death at Canterbury, 22d August 1532.

WARNER, CHARLES DUDLEY, a well known American writer, born at Plainfield, Mass., Sept. 12, 1829, and graduated from Hamilton College in 1851. He studied law, and practiced for a time in Chicago, Ill., and after that edited the *Press and Courant* of Hartford, Conn. He has, besides numerous magazine articles, published *My Summer in a Garden* (1871), *Saunterings* (1872), *Back-Log Studies* (1872), *Mummies and Moslems* (1876), and others. With Samuel L. Clemens (Mark Twain) he produced *The Gilded Age.*

WARNER, SUSAN, an American novelist, born at New York, N. Y., in 1818, and devoted her life to literary pursuits. She published *The Wide, Wide World; Queechy; The Hills of Shatemuc; The Golden Ladder; The Old Helmet; American Female Patriotism;* and *The Law and the Testimony.* The first two attained enormous circulations, and were translated into several languages. W. died at Highland Falls, N. Y., March 17, 1885.

WARREN, a town of Trumbull Co., O., on the Mahoning River, 52 miles E. of Cleveland. It has four railroads, and is noted for its coal and iron industries. Dairying is one of the chief industries of the surrounding country. Pop. 6000.

WARREN, JOSEPH, an American patriot, born at Roxbury, Mass., June 11, 1741, and graduated from Harvard College in 1759. He studied medicine and began the practice of that profession in Boston. He was an ardent patriot, and after the battle of Lexington, was active in organizing the Continental militia, and was made major-general by appointment of Congress. He was killed at the battle of Bunker's Hill, June 17, 1775, near the spot where the monument in memory of that conflict now stands. His life has been written by A. H. Everett.

WARR'EN, SAMUEL, English novelist and lawyer, was born in Denbighshire, Scotland, 23d May 1807, studied at Edinburgh for the medical profession, but afterwards went to London and qualified as a lawyer. He was called to the bar at the Inner Temple in 1837, made Queen's Counsel in 1851, and appointed Recorder of Hull in 1852. The following year brought him the degree of D.C.L. from Oxford; in 1856 and 1857 he was elected a member of Parliament; and in 1859 he was appointed by Lord Chelmsford a Master in Lunacy. He resigned the recordership of Hull in 1874, and died 29th July 1877. W.'s best achievements in fiction were *Diary of a Late Physician* (1832, 2 vols.), and *Ten Thousand a Year* (1841, 3 vols.); and in professional literature, *Popular and Practical Introduction to Law Studies* (1835; new ed., entirely remodeled, &c., 1845); and *Blackstone Systematically Abridged* (1857). As a novelist W. enjoyed an amazing success, which was not confined to England, but extended to America and the Continent. He possessed genuine humor, but of the kind which is hardly to be distinguished from extravagence and caricature. Of W.'s lesser productions it is enough to note *The Lily and the Bee* (1851), a strange rhapsodical poem on the Great Exhibition of 1851; *Now and Then* (1847, a novel of religious tendency; and *Moral and Intellectual Development of the Age* (1854). A collected edition of his literary works was published in 5 volumes (1853–54), having been preceded by a German edition by Tauchnitz (1843–48).

WASHBURN, EMORY, LL.D., an American lawyer and statesman, born at Leicester, Mass., in 1800; educated at Williams College (1817), and began to practice law at Worcester, Mass., was a judge of the court of common pleas (1844–47), governor of the state (1854–55), and professor of law at Harvard (1855–76). Died at Cambridge, Mass., in 1877. He published *Treatise on the American Law of Real Property* and law of *Easements and Servitudes,* both of which are standard authorities.

WASHBURN, ELIHU BENJAMIN, born at Livermore, Me., in 1816; learned the printer's trade; studied law and began the practice of that profession at Galena, Ill.; was a member of congress (1853–69); was appointed secretary of state, by Pres. Grant, in 1869, but soon resigned, and was made minister to France; and was recalled at his own request in 1877.

WASHINGTON, a manufacturing town of Fayette Co., O., on Point Creek. It has railroad communications with Cincinnati, Columbus, and other important points. Pop. 5000.

WASHINGTON AND JEFFERSON COLLEGE, an American educational institution at Washington, Pa., established in 1865, by the consolidation of Jefferson College at Carronsburg, Pa., and Washington College at Washington, Pa. It has new buildings, and an endowment that supports its faculty of nine professors.

WASH'INGTON AND LEE UNIVER'SITY, at Lexington, Virginia, was originally the Augusta Academy at Greenville, and was chartered in 1782. A grant of stock from General Washington was commuted by the legislature to an interest-bearing fund of $50,000, and this sum has been augmented by gifts of $25,000 from the Cincinnati Society in 1803, and of $40,000 from Mr. J. Robertson in 1826. The institution comprises 13 elective schools, including schools of law, engineering, and applied science. Scholarships are opened to divinity students, sons of ministers, intending journalists, teachers, and practical printers, and the foremost pupils of certain high schools and academies. Degrees are only gained by examinations in the several schools. The government is vested in the president and faculty under a board of trustees.

WASHINGTON, BUSHROD, LL.D., nephew of George W., born in Virginia, in 1759; served in the Colonial army during the Revolution; practiced law at Philadelpia, Pa., and afterwards in his native state; and in 1788 was made one of the judges of the U. S. supreme court. Died at Philadelphia in 1829. He published several volumes of *Reports.*

WAST'WATER, in Cumberland, the seventh largest of the English Lakes, lies 14 miles S.S.W. of Keswick, from which it may be gained by the steep Sty Head (1560 feet) or the Black Sail Pass (1690 feet). Shut in by rugged mountains, among them Scafell Pike (3208 feet), the highest point in England, W. presents an aspect of wild and gloomy grandeur. It is 3 miles long by half a mile wide, and has a depth of 270 feet.

WATERFORD, a town of Saratoga Co., N. Y., on the Hudson River, near the month of the Mohawk River, 4 miles from Troy. It is engaged in the manufacture of knit goods, fire hydrants, steam and hand fire engines, valves, paper, and brushes. Pop. 4326.

WATERLOO, a town of Black Hawk Co., Ia., on the Cedar River. It has two railroads; is surrounded by a fine agricultural country; and is engaged in manufactures of various kinds. Pop. 5630.

WATKINS GLEN, one of the most remarkable and picturesque phenomena of nature in America, in Schuyler Co., N. Y., and near the village of Watkins. Through a narrow chasm, with perpendicular rocks of from 200 to 300 feet high, runs a beautiful stream of water, which here and there dashes over cascades. This spot is visited every year by thousands of tourists.

WAT'SON, Richard, an English prelate, born at Heversham, Westmoreland, in August 1737, from the grammar-school of his birthplace was elected to a sizarship of Trinity College, Cambridge (1754), where he became a fellow (1760). Knowing nothing of science, he was raised to the chemical chair (1764), but exchanged it in seven years' time for that of divinity, and the latter he retained as well as a prebend and the archdeaconry of Ely, when in 1782 he was advanced to the bishopric of Llandaff. Himself of doubtful orthodoxy, he combated the views of Gibbon and Paine in his *Apology for Christianity* (1771) and *Apology for the Bible* (1796), other works by him being *Chemical Essays* (5 vols. 1781–87; 7th ed. 1800), *Sermons on Public Occasions* (1788), and *Miscellaneous Tracts* (2 vols. 1815). He died at Calgarth Park, in Westmoreland, 4th July 1816. See his autobiographical *Anecdotes of the Life of R. W.* (1817).

WAUKESHA, in Waukesha Co., Wis., on the Fox River, and 18 miles from Milwaukee. It is engaged in manufacturing and trade; and has stone quarries, mineral springs, and good water-power. It is widely known as a watering place, in connection with its mineral springs, and is sometimes called the Saratoga of the West. The surrounding country is fertile. The State Industrial School is located here. Pop. 4500.

WAUSAU, in Marathan Co., Wis., on the Wiseonsin River. It has two railroads, and is engaged in general lumber trade and general manufacturing. Pop. 8500.

WAYLAND, Francis, D.D., LL.D., an American thinker, born in New York, March 11, 1796, and graduated from Union College in 1813. He studied medicine and practiced at Troy, N. Y., but in 1816 entered the ministry of the Baptist Church. He was a tutor in Union College, pastor of a church in Boston, and was made President of Brown University in 1827. In 1855 he resigned, and was for a time pastor of a church in Providence. He published *Elements of Moral Science* (1835), *Elements of Political Economy* (1837), *Limitations of Human Reason* (1840), *Christianity and Slavery* (1845), *Elements of Intellectual Philosophy* (1854), *Life of Rev. Adoniram Judson, D.D.* (1853), *Letters on the Ministry* (1863), and other works. Died at Providence, R. I., Sept. 26, 1865. His life has been written by his sons Francis and H. L.

WAZI'RIS (the children of Wazir or Vizier), a tribe of independent Afghans, who occupy the Sulaiman Mountains, on the W. frontier of the Punjaub, British India. It is estimated that they can furnish 44,000 fighting men. Some of them have settled quietly within British territory, chiefly in the district of Bunnu, where they cultivate 27,000 acres and pay a revenue of £900. The majority yet live in the hills, a terror to all their neighbors, especially to the caravans that traverse the Gomul pass. Their crops are wheat, maize, and barley; they rear horses and sheep, and export iron and wood.

WEBB, Alexander S., born at New York, N. Y., in 1835; educated at West Point (1855); after serving on the frontier, was assistant professor of mathematics at West Point (1857–61); served with distinction during the civil war, and was twice severely wounded, at Gettysburg and the Wilderness; and in 1871 became president of the college of the City of New York.

WEBB, Samuel Blatchley, an American patriot, born at Wethersfield, Conn., in 1753; entered the Continental service at the outbreak of the Revolution; was engaged at Bunker Hill, Trenton, and Brandywine, and rose to the rank of major-general. Shortly after the close of the war he removed to Claveraek, N. Y., where he died, Dec. 3, 1807.

WEB'STER, John, an English dramatist, born in the latter part of the 16th c., wrote plays partly in conjunction with Dekker. He lived on into the period of the Commonwealth, and died about 1654. His chief original dramas are *The White Devil, or Vittoria Corombona* (1612), and *The Duchess of Malfi* (1619). Both are full of tragic pathos and exquisite description, and secure for their author a high place among the selecter spirits of the Elizabethan age.

WEED, Stephen H., an American general, born at New York, N. Y., in 1834; educated at West Point (1854); served in the Florida war; distinguished himself by his great gallantry at the battles of Antietam and Chancellorsville in the Civil war; was promoted to be major-general; and was killed at the battle of Gettysburg, while at the head of his command, July 2, 1863.

WEISS, John, an American author, born at Boston, Mass., in 1818; educated at Harvard College (1837) and the divinity school (1840); was twice minister of a Unitarian church at Watertown; and withdrew from the ministry in 1870 to devote himself entirely to literary work and took up his residence at Boston. Died in 1879. He published *Life and Correspondence of Theodore Parker, American Religion*, and *Wit, Humor, and Shakespeare*.

WEITZEL, Godfrey, an American general, born at Cincinnati, O., in 1835; educated at West Point (1855); served with gallantry in the civil war, being present at the siege of Port Hudson (1863) and accompanying Gen. Butler's expeditions against New Orleans and Fort Fisher. He subsequently (1865) was given a command in Virginia, and eventually retired from the service with the rank of major-general.

WELCH, John, D.D., a Scottish divine, son of the proprietor of Collieston in Nithsdale, was born about 1570, spent part of his youth in the society of Border thieves, and 'lived for a time entirely by plunder,' but growing ashamed of his wickedness, was reconciled to his family and studied for the church. Ordained minister at Selkirk before he had reached his twentieth year, he was successively called to Kirkcudbright and Ayr, where he proved himself a bold and successful preacher of the gospel. His opposition to James VI.'s arbitrary policy led to his imprisonment (1605), and banishment (1606) from the kingdom. He sought refuge in France, and became pastor of a Protestant congregation first at Nerac, and afterwards, for sixteen years, at St. Jean d'Angely, in Lower Charente. Owing to declining health, he obtained permission to return to England, and died in London 1623. His wife, Elizabeth Knox, third daughter of the great reformer, died at Ayr in Jan. 1625.

WELHAVEN, Johan Sebastian Cammermejer, a Norwegian poet, born 22d December 1807 at Bergen, studied at Christiania from 1825, where he became 'Lector' in 1840, and 1846 Professor of Philosophy. His first appearance in literature was closely connected with the political and literary ferment which about 1830 produced a new epoch in the social history of Norway. The views of W. were fullest expressed in the poem *Norges Dæmring* (Christ. 1834), which with the boldest freedom lashed the weaknesses of the Ultra-Norse School that strove to curb the powerful influence of Danish culture. Before this he had written *Fre Dusin Complimenter tie Henrik Wergeland* (Throndhjem 1838) and *Henrik Wergeland's digtekunst og Character* (Christ. 1839), but henceforth from the long and bitter controversy he had now called forth W. in the main held aloof. The chief events of the remainder of his life were the issues of four collections of poems at Christiania in 1839, 1845, 1848, and 1860, marked by great finish of form and beauty of style, and of his *Reisebilleder og digte* (Christ. 1851). Of great merit are his romances *Asgaardereien* and *Eyvind Bolt*, and the short sketches *Holberg* (Christ. 1854), and *Ewald og de Norske Digtere* (*ib.* 1863). W.'s *Samlede Skrifter* are in 8 vols. (Copenh. 1868). He died 21st October 1873.

WELLES Gideon, an American statesman, born at Glastonbury, Conn., July 1, 1802, and was educated at Norwich University. From 1826 to 1837 he edited the Hartford *Times*, and after holding various political positions, was in 1861 made secretary of the navy by President Lincoln, which position he held throughout the civil war. Died at Hartford, Conn., Feb. 11, 1878.

WELLS, Charles Jeremiah, born in London, England, in 1800, was educated at Edmonton with Keats's brother, and Horne the author of *Orion*. With Keats himself he grew intimate, and after that intimacy was snapped by a hoax on the poet's brother, it was in rivalry with Keats that he wrote the little prose volume, simple, idyllic, stillborn—*Stories after Nature* (1822). Two years later appeared *Joseph and His Brethren*, by '*H. L. Howard.*' *Joseph* lay long neglected, by no man more than by its author, who from fishing and boating in S. Wales betook himself about 1840 to Brittany, there raised, it is said, the dead to life by prayer, and finally settled at Marseille, where he died 17th February 1879. But *Joseph* ere that had been brought from prison by Swinburne, whose attention was called to it by D. G. Rossetti, and who, after vainly dwelling, in his *Essay on Blake*, on the 'dramatic language, passion, and characterization of this great poem,' had the tardy satisfaction of adding to the reprint (1876) an Introduction that commanded from the critics an almost unanimous credit of 'the most Shakespearean drama since Shakespeare's day.'

WELLS, David Ames, D.C.L., born at Springfield, Massachusetts, June 17, 1828, graduated (1847) at Williams' College, and at the Lawrence Scientific School, Cambridge (1851), where he was assistant-professor (1851–52), became a practical chemist at Boston (1853), a member of the publishing house of Putnam & Co., New York (1857–58), and associate-editor of the *Springfield Republican* (1858). W. was sent to Europe (1862 and 1867) on commissions for the United States Government, was United States Special Commissioner on Revenue (1866–70), during which time he made fifteen valuable reports, was appointed (1872) lecturer on Political Economy at Yale College, visited Europe (1873), succeeded John Stuart Mill as foreign associate of the French Academy of Political Sciences (1874), received the degree of D.C.L. from Oxford University (1874), and has for many years been a zealous advocate of

Free Trade. He has edited the *Annual of Scientific Discovery* (16 vols. Bost. 1850–65); C. Knight's *Knowledge is Power* (1856), and Timb's *Things not Generally Known* (1857); and is the author, among other works, of *The Science of Common Things* (1857); *Elements of Natural Philosophy* (1857); *Principles and Applications of Chemistry* (1858); *First Principles of Geology* (1861), and *Our Burden and Our Strength* (1864).

WER'GELAND, Henrik Arnold Thaulow, a Norwegian poet, was born at Christiansand, 17th June 1808, and graduated at Christiania in 1829. His early sympathies were fired by the July Revolution in France, the struggles of the Poles, and the rise of Democratic sentiment in Norway. Liberty and Reason became his guiding-stars in politics and religion, and he followed their guidance with all the force of genius and the enthusiasm of a poet. His first works were the so-called farces of 'Siful Sifadda.' *Ah!* (1827), and *Irreparabile Tempus* (1828), and *Digte, forste Ring* (1829). In the latter year W. entered public life as one of the most eloquent opponents of the Conservative party. His religio-philosophical poem, *Skabelsen, Mennesket, og Messias* (1830), called forth the sharp criticism of Welhaven in 1832. W. was for some time editor of *Folkebladet*, and from 1835 to 1837 of *Statsborgeren;* and after the dissolution of the popular parliament in 1836 published a large number of violent party songs and pamphlets. His *Digte, anden Ring*, and the drama *Barnemorder-sken* (1835), are full of the noblest lyric diction, and show a great advance on his earlier works in clearness. But W.'s style was at best too difficult to be popular with the vulgar, as his genius was too original to be the organ of any party. The friendly offices of King Karl Johan gradually won him over to the court; in 1839 a pension from the king succeeded in drawing him from the field of politics. To this later period belong some of his best poems, *Jan van Huysums Blomsterstykke, Svalen, Jöden, Jödinden*, and *Den Engelske Lods*. He died of consumption at Christiania, August 12, 1845. His poems are published in 9 vols. by H. Lassen (1852–59), and a selection, *Udvalgte Skrifte*, appeared in 1859.

WESLEYAN FEMALE COLLEGE, an American educational institution, at Macon, Ga., founded in 1836, and controlled by the Methodist Episcopal Church, South. It is claimed that it was the first female college ever chartered, and empowered to confer the usual college degrees upon females.

WESLEY'AN UNIVER'SITY, The, opened at Middletown, Connecticut, in 1833, occupies the former buildings of the American Literary, Scientific, and Military Academy, which with recent additions comprise a library of 20,000 volumes, a chapel erected as a memorial of the eighteen students and alumni who fell in the Civil War, laboratories, the Orange Judd hall of natural science, &c. There are three courses: Classical, Latin-Scientific, and Scientific. Since 1872 ladies have been admitted to the W. U.

WESTBOROUGH, in Worcester Co., Mass., on the Boston & Albany Railroad, 32 miles from Boston. It is engaged in manufacturing boots, shoes, and various other articles. The State Reform School for Boys is located here. Pop. 5214.

WEST'COTT, Brooke Foss, D.D., born near Birmingham, England, in January 1825, obtained a scholarship at Trinity College, Cambridge, and having gained many university distinctions graduated B.A. (1848) as twenty-third wrangler and bracketed senior classic. Elected a fellow of Trinity in 1849, he next year took orders, and was an under-master at Harrow from 1852 to 1869, when he received a Peterborough Canonry. In 1870 he became Regius Professor of Divinity at Cambridge, in 1875 an honorary chaplain to the Queen, and in 1879 a chaplain in ordinary, being besides a member of the Revision Company.

WESTERN COLLEGE, an educational institution at Western, Ia., established by the United Brethren in Christ in 1856. It has classical, scientific, and commercial departments, and co-education of the sexes is practiced.

WEST'FIELD, a town of Massachusetts, 9 miles W. of Springfield by rail. It has 9 churches, a public library, and 1 weekly newspaper. The waterworks of W. are very large. W. has great whip-factories, turning out annually $800,000 worth of whips, extensive cigar-manufactures—18,046,000 cigars having been made in 1875—paper-mills, &c. It is also noted for its manufacture of church-organs and piano legs. Pop. 7587.

WEST POINT. See United States Military Academy.

WEY'ER, Sylvain van de, a Belgian statesman, born in 1802 at Louvain, studied law there, and subsequently practiced at the bar in Brussels till appointed city librarian, keeper of the Burgundian archives, and professor at the museum. These appointments he lost in consequence of his becoming leader of the opposition and co-editor of the *Courrier des Pays-Bas*. After the Revolution of 1830 he was a member of the Committee of Public Safety, and of the Provisional Government, and in the National Congress was a zealous advocate of the exclusion of the House of Orange. In November 1830 he was commissioned to confer with the English cabinet, and on his return he became President of the Diplomatic Committee and Minister of Foreign Affairs (February 26, 1831). On the accession of Prince Leopold, W. was appointed ambassador to England. Recalled in 1845 to form a new cabinet, he failed as Minister of the Interior to reconcile the Liberal and Catholic parties, and in 1846 returned to his former post in London, which he held till his resignation in 1867. He died in London, May 23, 1874.

WHARTON, Francis, D.D., LL.D., born at Philadelphia, Pa., 1820; educated at Yale College (1839); was admitted to the bar and settled in his native city; became professor of logic in Kenyon College, Ohio (1856–63); entered the ministry of the Protestant Episcopal Church, and was rector of a church at Brooklyne, Mass. (1863); and in 1866 became one of the faculty of the Harvard divinity school. Among his works are the following: *A Treatise on the Criminal Law of the United States; A Treatise on the Law of Homicide in the United States; A Treatise on Theism and Modern Skepticism; The Silence of Scriptures;* and *A Treatise on the Conflict of Laws.*

WHEATON COLLEGE, an educational institution at Wheaton, Ill., founded by the Wesleyan Methodists in 1850. On account of financial difficulties, in 1860 it was transferred to the control of the Congregationalists. It has property to the value of more than $100,000, a faculty of eleven members, and its course of instruction is open to both sexes.

WHID'AH BIRD, the name given to a species of *Insessorial* birds allied to the weaver. It inhabits W. Africa, and is noted for the peculiar development of the tail-feathers. The webs of the two central feathers are very broad, and the shafts protrude without a web. The next two feathers—one on either side—are extremely long, and may measure upwards of 10 inches in length. This disposition of feathers is typical of the broad-shafted W. B. (*Viduia paradisea*), which attains a length of 5 or 6 inches, and is of a brown-black hue above, and pale-buff below, with an orange collar. The Shaft-tailed W. B. (*V. regia*) is so named from its four central feathers presenting the bare shafts without any web. The color is a dark brown, and the length from 9 to 10 inches.

WHITE, Andrew Dixon, LL.D., an American educator, born at Homer, N. Y., Nov. 7, 1832, and graduated from Yale College in 1853. He subsequently studied at the University of Berlin, and returning to the U. S., from 1857 to 1862 was professor of history and English literature in the University of Michigan. He was one of the founders of Cornell University, and in 1866 was made president of that institution. During late years he has been a prominent member of the Republican party. He has published *Lectures on Mediæval and Modern History* (1861), *A Word from the North-west* (1863), *The New Education* (1868), *Report on the Co-education of the Sexes* (1871), *The Warfare of Science* (1876), and others.

WHITE, Richard Grant, an American author, born in New York City, May 22, 1822, and graduated from the College of the City of New York (then known as the Free Academy) in 1839. He studied medicine and afterwards law, and was admitted to the bar in 1845, but has devoted his life almost entirely to literary work. He has been connected with several papers, at various times, and has written voluminously for the magazines, making a specialty of philological subjects. Died in 1885. He published *Shakespeare's Scholar* (1854), *The Authorship of the Three Parts of Henry VI.* (1859), *National Hymns, how they are Written and how they are not Written* (1861). *The New Gospel of Peace, according to St. Benjamin* (1863–66). *Memoirs* of the Life of William Shakespeare (1865), *Words and their Uses* (1870), and others.

WHITE, William, D.D., born at Philadelphia, in 1748; educated at Philadelphia College (1765); visited England, where he studied theology, and was admitted to the ministry of the Established Church in 1742; returned to the United States, and became rector of St. Peter's Church at Philadelphia; was made presiding officer of the first Convention of the Episcopal Church in America; was chosen Bishop of Pennsylvania (1786), and, visiting England, was there consecrated to that office (1787). He was one of the most active of the early workers of his denomination in America. Died at Philadelphia, in 1836. An account of his life has been published by Rev. Bird Wilson (1839).

WHITEHALL, in Washington Co., N. Y., on Lake Champlain, at the mouth of the Poultney River. It is extensively engaged in the lumber business, and boat-building is carried on. Pop. 5347.

WHITE'LOCKE, Bul'strode, born in London, England, 2d August 1605, from Merchant Taylors' passed to St. John's College, Oxford, and thence degreeless to the Middle Temple. Returned to the Long Parliament of 1640, he acted as chairman of the committee for drawing up Strafford's charges of impeachment, and was one of the commissioners appointed to treat with the king at Oxford; but during the Troubles he steered a uniformly middle course, as member of the Westminster Assembly

643) opposing the adoption of Presbyterianism, as governor of Windsor (1644) saving the royal library and cabinet of medals from dispersion, and as a commissioner of the Great Seal (1649) withholding his consent to Charles's death. Ambassador to Sweden (1653), he concluded a treaty with Queen Christina, and by her was made knight of the order of Amartha, on his return becoming a commissioner of the Treasury (1655), Speaker of the House of Commons (1656), and one of Cromwell's lords (1657). He helped, however, to dethrone the Protector's son, and after the Restoration lived unmolested at Chilton Park, his Wiltshire seat, where he died, 28th January 1676.

WHITMAN, WALT., born on Long Island in 1819; educated at the public schools and learned the printer's trade; became respectively carpenter, editor, and government clerk at Washington; subsequently removed to Camden, N. J. He has published *Leaves of Grass, Democratic Vistas, The Two Vistas*, and *Drum Taps*. There is no unanimity of opinion as to the rank to which he is entitled as a poet. He certainly has the merits of genius and originality, whatever his defects may be.

WHIT'NEY, WILLIAM DWIGHT, born at Northampton, Mass., 9th Feb. 1827, after graduating at Williams College in 1845, held for some time a clerkship in a bank. Having, however, resumed his studies at Yale College (1849), he visited Europe, and at Berlin under Weber, at Tübingen under Roth, made Oriental languages, Sanscrit especially, the object of three years' investigation (1850–53); and returning home by way of Paris, London, and Oxford, became in 1854 professor of Sanscrit in Yale College, and of comparative philology in 1870. He has been besides a member of the American Oriental Society since 1849, its librarian (1855–73), and corresponding secretary since 1857, and was first president of the American Philological Association. W. has done in America what Max Müller has done in England, popularized the science of language.

WHIT'WORTH, SIR JOSEPH, BART., F.R.S., a well-known mechanician, was born at Stockport, England, in 1803. At the Great Exhibition of 1851 he exhibited a number of improved tools and machines; and a few years later turned his attention to the construction of projectiles and firearms of great range and accuracy. In this department he has gained a high reputation; and for his services in perfecting military armaments he was created a baronet in 1869. The same year he founded the Whitworth Scholarships for the encouragement of engineering science. These consist of 30 scholarships of £100 a year each, and tenable for two or three years. In 1878 he received from the University of Edinburgh the degree of LL.D. He is the author of *Miscellaneous Papers on Practical Subjects; Guns and Steel* (1873).

WHYTE-MELVILLE, GEORGE JOHN, son of a Fifeshire laird, born near St. Andrews, Scotland, in 1821, was educated at Eton, and entering the army at eighteen, retired after ten years' service, having risen to be captain in the Coldstream Guards (1846). On the outbreak, however, of the Crimean War, he joined the cavalry of the Turkish contingent, and during 1855–56 gained the experiences embodied in the *Interpreter* (1858). This was the fourth of some twenty novels, which, whether sporting, historical, or 'costume,' have all a cleverness and dash that make them popular, among them being *Digby Grand* (1853), *General Bounce* (1854), *Kate Coventry* (1856), *Holmby House* (1860), *The Gladiators* (1863), *Cerise* (1865), *Sarchedon* (1871), *Katafelto* (1875), and *Black but Comely* (1879). He who so well described a good run with the hounds, met his death in the Gloucestershire hunting-field, 5th December 1878.

WICHITA, a town of Sedgwick Co., Kan., at the mouth of the Great Arkansas River. It has two railroads; is engaged in stock-raising and wheat-growing; and is an important shipping point for Texas cattle and grain. Pop. 4911.

WIL'DERNESS, BATTLES OF THE, in the American Civil War, the name conferred on a series of desperate actions in Virginia between the Federals under Grant, and the Confederates under Lee, May 5–31, 1864. Commencing in the 'Wilderness' proper, a swampy expanse of brushwood to the S. of the Rapidan, the contest was renewed at Spottsylvania and on the bank of the North Anna, and ended in the Federals' repulse at Cold Harbor in their attempt to enter Richmond. The Federal loss was officially stated at 41,398, including 33,948 killed and wounded; that of the Confederates was certainly less.

WILKES-BARRE, a city of Luzerne Co., Pa., on the N. branch of the Susquehanna River. It has numerous railroads, carries on a large trade, and is the center of the Wyoming Valley anthracite coal-fields. Pop. 32,000.

WILL'IAMS, EDWARD (Cymr. *Iolo Morganwg*), born at Llancarvan, Glamorganshire, in 1745; with Owen Jones and Pughe edited the *Myvyrian Archæology* (3 vols. 1801–7), and himself published, among other works, *The Fair Pilgrim, a Poem translated from the Welsh* (1792). To this he appended specimens of Druidical 'Triads,' which, after a long-protracted controversy and on the non-production of their MSS., are commonly looked on as a literary forgery. A friend of Southey, W. by trade was a stonemason, and worked for some years in London, but died at Flemingstone, Glamorganshire, 17th December 1826, leaving a posthumous Welsh work, *Secrets of the Bards of the Isle of Britain* (1829). See E. Waring's *Recollections of E. W.* (1850).

WILLIAMS, JOHN, D.D., born at Deerfield, Mass., in 1817; educated at Trinity College (1835); entered the ministry of the Protestant Episcopal Church, and was rector of a church at Schenectady, N. Y. (1842–48); was president of Trinity College, Connecticut (1848–53), assistant bishop of Connecticut (1861), and bishop (1865). Among other works, he is author of *Thoughts on the Gospel Miracles*, and *Exposition of the Thirty-nine Articles*.

WILLIAMS, MONIER, son of a Surveyor-General of the Bombay Presidency, was born at Bombay, 12th November 1819, and after studying at King's College, London, and Balliol, Oxford (1838), gained an Indian writership, and entered Haileybury College. In spite of a brilliant career there, circumstances forced him to resign his appointment, and returning to University College, Oxford, he was elected Boden scholar (1843), graduating B.A. in 1844. He occupied the Sanscrit chair at Haileybury (1844–58), was two years Oriental master at Cheltenham College, and in 1860 defeated Max Müller in a candidature for the Boden Sanscrit professorship at Oxford. His tenure of this office has been distinguished by his two visits to India (1875–76), there to collect subscriptions to found at Oxford an Indian Institute, a task that he has successfully achieved. Among his works are *A Sanscrit Grammar* (1846; 4th ed. 1877), an *English-Sanscrit Dictionary* (1851), *Rudiments of Hindustani* (1858). *Indian Epic Poetry* (1863), *A Sanscrit-English Dictionary* (1872). *Indian Wisdom* (1875), *Hinduism* (1877), and *Modern India and the Indians* (1878).

WILLIAMS, ROWLAND, D.D., born at Halkyn, Flintshire, England, 16th August 1817, from Eton (1828–36) passed to King's College, Cambridge, of which, having graduated in 1841, he became a fellow and tutor. Taking orders, he was appointed chaplain to the Bishop of Llandaff, vice principal and Hebrew professor at Lampeter College (1850), select preacher to Cambridge University (1854), and vicar of Broadchalk, Wiltshire (1859). A foremost member of the Broad Church party, he was condemned by the Court of Arches (1862) for his paper on Bunsen's 'Biblical Researches' contributed to the famous *Essays and Reviews*, and having resigned his professorship prior to the reversal of that sentence by the Privy Council (1864), resided thenceforth at his vicarage down to his death there, 18th January 1870.

WILLIMANTIC, in Windham Co., Conn., on the Willimantic River, at the junction of several railroads, 50 miles from Providence. It is engaged in silk and cotton manufactures. Pop. 6612.

WILMOT, DAVID, an American statesman, born at Bethany, Pa., Jan. 20, 1814, and began the practice of law at Wilkesbarre, Pa., in 1834. In 1845 he was elected to Congress by the Democratic party, and continued a member of that body until 1851. In 1846 a bill was before congress, to appropriate $2,000,000 for the purchase of territory from Mexico, and on August 8th Mr. Wilmot introduced an amendment to it, which has since come to be known as the 'Wilmot Proviso.' It was to the effect 'that, as an express and fundamental condition to the acquisition of any territory from the Republic of Mexico by the United States, neither slavery nor involuntary servitude shall ever exist in any part of the said territory.' This amendment was passed by the House, but failed to pass the Senate. It led, however, to the organization of the Free-Soil party. Mr. Wilmot is best known by this amendment. He was afterwards U. S. Senator, and Judge of the U. S. Court of Claims. Died at Towanda, Pa., March 16, 1868.

WILSON, HENRY, LL.D., an American statesman, born at Farmingham, N. H., Feb. 16, 1812. His early surroundings were those of poverty, and his education was almost entirely self acquired. When a boy, he was apprenticed to a farmer. At the age of 21 he removed to Natick, Mass., where he spent the remainder of his life. A few years afterwards, visiting Washington, D. C., he became profoundly impressed with the wrong of slavery, and was ever afterwards one of its most earnest opponents. Originally a Whig, he left that party in 1848, when it nominated Gen. Taylor for President, and adopted a platform which raised no opposition to the extension of slavery, and joined the Free-Soil party. After filling various political positions in his own state, he was, in 1855, elected U. S. Senator, to succeed Edward Everett. During the civil war he rendered great services to the country as chairman of the committee on military affairs. In 1872 he was elected Vice-President of the U. S. He was a man of large executive abilities, unbending integrity, and intense purpose. He published *The Rise and Fall of the Slave Power*. Died at Washington, D. C., Nov. 22, 1875.

WIMM'ERA, a district of the colony of Victoria, occupying its N.W. portion, and having an area of 25,000 sq. miles. It consists

for the most part of wide sandy plains, thinly grassed and badly watered, yet supporting great flocks of sheep, for which water is obtained by digging wells from 80 to 140 feet deep. The plains are intersected by belts of scrub and forest, and there are also patches of land suited for agriculture.

WIN'CEY is a mixed textile fabric, consisting of a cotton warp with a worsted weft. Winceys are woven either plain or twilled, and though generally made of grey, drab, or brown colors without any pattern, in fancy winceys checks and stripes are introduced, but the coloring is always sober. It is chiefly used for gowns and petticoats, and of late years it has been commonly employed for men's shirts, &c.

WINCHELL, ALEXANDER, LL.D., an American scientist, born at North East, Duchess Co., N. Y., Dec. 31, 1824, and graduated from Wesleyan University in 1847. After teaching in several institutions, he was made, in 1853, professor of physics and civil engineering in the University of Michigan, and, in 1855, he became professor of geology, zoology, and botany in the same. He was state geologist of Michigan and directed the geological surveys of that state and Minnesota. He was subsequently chancellor of Syracuse University (1872–74) and professor of geology and zoology in that institution. He has published *The First Biennial Report of the Geological Survey of Michigan* (1861), *The Grand Traverse Region* (1866), *Geological Maps of Michigan* (1865), *Geological Chart of New York* (1870), *Sketches of Creation* (1870), *Geology of the Stars* (1872), *The Doctrine of Evolution* (1874), *Lay Theology* (1876), and numerous essays and addresses.

WINGS, the name applied to those organs in animals by which flight is effected. In their most typical development, as seen in birds, they consist of the bones of the fore-limbs, specially modified to form a support and axis, whilst attached to this skeleton are the muscles moving the limb. Externally the skin is provided with feathers, and the whole fore-limbs of the bird thus form the W.; while the bones of the shoulder girdle are modified to form a special support for the organ of flight. In the bat the 'wing' consists of an expansion of the skin or integument, supported on four of the fingers, which are extremely long. This membrane, or *patagium*, extends from the fore limbs to the hind limbs, and in many cases between the hind limbs and tail as well. In such Mammalia as the flying foxes, flying squirrels, flying phalangers, and in the lizards known as flying dragons, the 'wing' is a mere expansion of skin, extending along the sides of the body, often connecting hind and fore limbs, and serving as a parachute to sustain the animals in their flying leaps from tree to tree, but in no sense serving as an organ of true flight. In insects the wing is formed of two delicate skin layers, supported on hollow tubes or *nervures*, placed in communication with the respiratory or breathing system. The W. of insects become thus related to respiration, and by their movements probably aid in the diffusion of air through the breathing-tubes.

WINK'ELRIED, ARNOLD STRUTH VON, a Swiss of Unterwalden, who, at Sempach, on the 9th of June 1386, contributed to the victory over Duke Leopold of Austria by rushing on the lances of the enemy and opening up a lane for his countrymen. A monument on the spot commemorates the deed. See Liebenau, *Arnold W.* (Aarau, 1862); and Kleissner, *Die Quellen der Sempacher Schlacht und die Winkelriedsage* (Göttingen, 1874).

WINNEBA'GO, a lake of Wisconsin, in the basin of the Fox River. It is 26 miles long and 10 broad, and has an area of 212 sq. miles. Both the river and the lake are navigated by steamboats, and afford good fishing.

WINNEBA'GOES, WINNIPEGOOS', or LITTLE WINN'IPEG, a lake of British N. America, draining into Lake Winnipeg, from which it is distant 50 miles westward. W. measures 125 miles by 25. It abounds in fish, and its shores are very fertile.

WINN'IPEG RIVER rises in Minnesota, and flows to Lake Winnipeg. Its course, though serpentine, is generally northwards. It passes through Rainy Lake and the Lake of the Woods, which are thus connected with Lake Winnipeg. Though its length is only 520 miles, it drains a very large basin, and discharges an immense volume of water into Lake Winnipeg. W. R. abounds in fish, and its shores are richly wooded, but the forest is rapidly being cleared, for the soil yields magnificent wheat crops. An Icelandic national colony has been founded, and a rapid influx of settlers from England is taking place. Much mineral wealth is known to exist in this region, though as yet it is undeveloped.

WINO'NA, a township of Minnesota, on the Mississippi, 90 miles S.E. of St. Paul by rail. It was founded in 1851, and has 15 churches, a public library, a normal school, 1 daily and 3 weekly newspapers. There are 3 saw-mills, 7 flour-mills, 2 foundries, and 6 carriage factories. In 1880 it exported 5,550,000 bushels of wheat and $1,500,000 of lumber. Pop. 10,208.

WINSLOW, EDWARD, one of the early settlers of New England, born at Droitwich, England, Oct. 19, 1595. He was born of a worthy family, received a good education, and in early life became addicted to the views of the Puritans. Traveling abroad he joined the congregration of Rev. John Robinson at Leyden. He was one of the company that crossed the Atlantic in the *Mayflower*, and was a prominent member of Plymouth colony. In 1635 he returned to England, and, by order of Archbishop Laud, was thrown into prison for having preached, being only a layman, and for having, as a magistrate, performed the ceremony of marriage. He lived in England during the protectorate, and enjoyed the confidence of Cromwell. Died at sea, between Jamaica and Santo Domingo, May 8. 1665. He was the author of several works, among which are *The Danger of Tolerating Levelers in a Civil State*, *New England's Salamander*, *The Glorious Progress of the Gospel among the Indians in New England*, and *A Platform of Church Discipline in New England*.

WIN'SLOW, FORBES BENIGNUS, D.C.L., born in London, England, but of a Massachusetts family, August 1810, was educated in Scotland and near Manchester, and after studying medicine at New York and the London University, passed the College of Surgeons (1835), and took his M.D. at Aberdeen. With his earliest practice he combined the duties of a *Times* reporter, but having since 1830 paid special attention to insanity, he opened a private asylum at Hammersmith (later another in London), and rose in time to be the supreme authority on all relating to diseases of the brain. Founder and editor of the *Quarterly Journal of Psychological Medicine and Mental Pathology* (1848) and of the *Medical Critic* (1861), vice-president of the Juridical and president of the Medical Society (1853), President of the Association of Medical Officers of Asylums (1857), and a Commissioner of Lunacy (1859), he was besides a member of numerous scientific bodies, a frequent contributor to the press, and the great 'expert' in medico-legal cases. He died at Brighton, 3d March 1874.

WINSLOW, JOHN A., an American naval officer, born in North Carolina, Nov. 9, 1811, and entered the navy in 1827. In 1855 he was made commander, and in 1862 captain. In 1864 he was in command of the *Kearsarge*, and on June 19 fought and sank the Confederate cruiser *Alabama*. The vessels were evenly matched, and the contest lasted for about an hour. The *Alabama* had become the terror of the seas to American merchant vessels, and Winslow won highest commendation for his brilliant victory. He was made commodore in 1864, and rear-admiral in 1866. Died Sept. 29, 1873.

WINSTED, a town in Litchfield Co., Conn., at the terminus of the Naugatuck Railroad, 26 miles from Hartford. It is extensively engaged in manufacturing, and is an important trade center. Pop. 5186.

WINSTON, in Forsyth Co., N. C. It contains a number of tobacco factories, which employ large numbers of men during the winter, and it is an important tobacco centre. It is also engaged in manufacturing and fruit culture. Pop. 7000.

WIN'TERBERGEN, a lofty mountain-range in the E. of Cape Colony, forming a part of the great dividing chain, sometimes called 'the backbone of S. Africa.' Its culminating point, the Great Winterberg Peak, is 7806 feet high.

WIN'TERHOEK MOUNTAINS, a range in Cape Colony whose eastern termination is about 30 miles N.W. of Port Elizabeth. Its loftiest peak, the Cock's-comb, is estimated to be 8000 feet high, and, though 20 miles inland, is visible 60 miles out at sea. There is also a W. Peak, 6840 feet high, 75 miles N.E. of Capetown, whence it is visible.

WINTHROP, THEODORE, born at New Haven, Conn., in 1828, educated at Yale College (1848); engaged in mercantile pursuits in New York City; conducted explorations in Central and South America; studied law at St. Louis, Mo.; removed to New York City (1855), where he became a lawyer; entered the Union army at the outbreak of the civil war; and was killed at the battle of Big Bethel, while leading an assault upon the enemy, June 10, 1861. His works, published after his death, are *Cecil Dreeme*, *John Brent*, *Life in the Open Air*, *Canoe and Saddle*, and *Edwin Brothertoft*.

WIREKER, NIGEL, flourished in the 12th c. in the reign of Henry II. He was a precentor in the Benedictine Monastery at Canterbury, and a friend of William of Longchamp, afterwards Bishop of Ely, to whom he dedicated a treatise *On the Corruption of the Church*. His chief work is *Brunellus*, or the *Speculum Stultorum* ('Mirror of Fools'), a satirical poem extending to nearly 4000 verses of Latin elegiacs. The hero Brunellus is an Ass who convinced that he has an immense power of patient labor, resolves to study at the University of Paris; he goes through the sciences, tries the various orders of the Church, is dissatisfied, resolves to establish a new one of his own, and after a long discussion with his favorite 'Galen,' is caught by his old master and forced to resume his original and true occupation. The poem is brisk and biting in its ridicule of scholastic and monastic fol-

lies, and may be regarded as in part a protest against ecclesiastical abuses.

WIRT, WILLIAM, LL.D., born at Bladensburg, Md., in 1772; became a lawyer and followed that profession at Culpeper, Va.; removed to Richmond (1806); was attorney-general of the United States (1817–29); and afterwards located at Baltimore, Md. He held several other public offices, and was the candidate of the Anti-masonic party for president, in 1832. Died at Washington, D. C., in 1834. He published a *Life of Patrick Henry*.

WISCON'SIN, UNIVERSITY OF, at Madison, in Wisconsin, incorporated in 1838, opened its first classes in 1851. It comprises a school of ancient and modern classics; a school of agriculture, engineering, mining, and of general and military science; and a school of law (organized in 1868). Instruction is free to all natives of the state (of both sexes since 1867).

WITHERSPOON, JOHN, D.D., LL.D., born in Scotland, in 1722; educated at Edinburgh University, and entered the ministry; was pastor of several churches; became president of Nassau Hall, Princeton, N. J. (now the College of New Jersey); took an active part in the colonial struggle for liberty, and was one of the signers of the Declaration of Independence; after the war visited England to raise founds for the college; and spent the closing years of his life on a farm near Princeton, where he died, in 1794. A fine monument has been erected to his memory, in Philadelphia.

WOFFORD COLLEGE, an American educational institution at Spartanburg, S. C., and under the control of the M. E. Church. It was named after Rev. Benjamin Wofford, who in 1851 gave $100,000 to found it.

WOLF SPIDER, a name given to spiders of the genus *Lycosa*, in which the body is large and hairy, and in which the fourth pair of feet is larger than the other pairs. It makes no web, but roams about in search of prey, and hides beneath stones. *L. Tarantula* is the Tarantula of Italy.

WOOCHANG', a town in the interior of China, province of Hu-pé, on the Yang-tse-kiang, opposite the important trading town of Hankow. It stands amid cotton-plantations and rice-fields, and is a great emporium for tea, which is exported to Britain *viâ* Shanghai. Hankow is virtually a suburb, and another considerable section of the town on the N. bank of the river is Hang-yang-fu. The pop. of W., including the outlying portions, is estimated at 1,000,000.

WOODS, LEONARD, D.D., an American divine, born at Princeton, Mass., June 19, 1774; educated at Harvard College (1796); entered the ministry and became pastor of a church (Congregational) at Newbury, Mass. (1798); was professor of theology at Andover Seminary (1807-46), and *emeritus* from that time until his death, in 1854. During the Unitarian controversy, he was a strong supporter of Calvinism, and wrote voluminously in its defense. Among his works are, *Doctrine of Perfection; Lectures on Church Government; Reply to Ware;* and *Letters to Unitarians.*

WOODS, LEONARD, JR., D.D., LL.D., son of Leonard, born at Newbury, Mass., in 1807; educated at Union College (1827); entered the ministry (1831); was professor of sacred literature at Bangor Seminary (1836–39); and president of Bowdoin College (1839–66); and afterwards visited Europe for the purpose of investigating records relative to the early history of Maine. Died in 1878.

WOOL, JOHN ELLIS, an American general, born at Newburg, N. Y., in 1788; studied law, but entered the U. S. army in 1812; was present at the battles of Queenstown Heights and Plattsburg in the war of 1812, and was severely wounded at the former; for his gallantry in this conflict was promoted and in 1841 had attained the rank of brigadier-general; at the outbreak of the Mexican war, organized a volunteer force of 15,000 men, and was second in command to Taylor at Buena Vista; was brevetted major-general for his services in the Mexican war and presented with a sword by congress and also by his native state; during the civil war, commanded fortress Monroe, and afterwards of the department of Virginia; was made major-general (1862), and retired from the service in 1863. Died at Troy, N. Y., in 1869.

WOOL'NER, THOMAS, R.A., an eminent English sculptor, was born at Hadleigh, in Suffolk, 17th December 1825 and educated in Ipswich. At the age of thirteen he entered the studio of William Behnes, under whom he worked for six years and became a skillful draughtsman. W.'s first efforts showed a fine imagination and a cultured intellect. He drew his inspiration from the high sources of poetry and history. In 1843 he exhibited at the Royal Academy 'Eleanor Sucking the Poison from Prince Edward's Wound,' and about the same time a life-size group, 'The Death of Boadicea,' the latter of which was hailed as the promise of a great career in ideal sculpture. These works were followed by figures of 'Puck,' 'Titania with her Indian Boy,' 'Eros and Euphrosyne,' and 'The Rainbow' (1848). In 1850 he joined Millais, Holman Hunt, and D. G. Rossetti in establishing the Pre-Raphaelite magazine called *The Germ*, to which he contributed some poems which were afterwards gathered, with additions, into a volume entitled *My Beautiful Lady* (1863; 3d ed. 1866). In 1854 he visited Australia, where he remained for two years, and executed some fine medallions. On his return to England he produced a life-size statue of Lord Bacon for the new museum at Oxford. Among W.'s subsequent works may be mentioned his statues of Prince Albert for Oxford, Lord Macaulay for Trinity College, Cambridge, William III. for the Houses of Parliament, Sir Bartle Frere for Bombay, Dr. Whewell for Cambridge, Lord Lawrence for Calcutta, Lord Palmerston for Palace Yard; busts of Tennyson, Carlyle, Newman, Darwin, Cobden, Dickens, Kingsley, Gladstone, Lushington (University of Glasgow), Huxley, and other distinguished men. 'Elaine with the Shield of Sir Lancelot,' 'Ophelia,' 'Guinevere,' and 'Achilles and Pallas Shouting from the Trenches' (1876), show the same high aim as the earlier products of his chisel. In 1878 W. completed a colossal statue in bronze of Captain Cook for the Government of New S. Wales, which has been erected in Sydney. In 1874 he was elected an R.A., and in 1877 was appointed Professor of Sculpture in the Royal Academy.

WOOL'SEY, THEODORE DWIGHT, D.D., LL.D., born in New York, 31st October 1801, graduated in 1820 at Yale College, where, after studying theology at Princeton, he was a tutor (1823–25). Licensed to preach in the latter year, he studied Greek in Germany (1827–30), became Greek professor at Yale College (1831), and was its president (1847–71). A master of political science, a brilliant scholar, and a profound and catholic theologian, W. has edited four Greek plays (1833–37) and Plato's *Gorgias* (1842), and has published many sermons and discourses; but his fame is principally based on his *Introduction to the Study of International Law* (1860; 5th ed. 1879) and *Political Science, or the State Theoretically and Practically Considered* (1878). He has also written *An Essay on Divorce and Divorce Legislation* (1869), and in 1874 re-edited Prof. Lieber's *Civil Liberty and Self-Government* and *Manual of Political Ethics*.

WOOSTER, in Wayne Co., O., on Killbuck Creek and the Pittsburg, Fort Wayne & Chicago Railroad, 52 miles from Cleveland. It is engaged in manufacturing, and is the seat of Wooster University. Pop. 5843.

WOOSTER UNIVERSITY, an American educational institution, at Wooster, O., founded in 1866 by the Presbyterian Church. It has fine buildings, museum, laboratory, a full corps of teachers, and an increasing endowment. It has three courses of study: classical, scientific, and philosophical. Co-education of the sexes is practiced.

WORCESTER, JOSEPH EMERSON, LL.D., born at Bedford, N. H., in 1784; educated at Yale College (1811); engaged in teaching at Salem, Mass., and in 1819 removed to Cambridge, Mass., where he spent the remainder of his life. He published several dictionaries and educational works, and in 1860 his *Dictionary of the English Language*. This work is, with Webster's *Dictionary*, standard authority, wherever the English language is spoken, and will ever remain a monument to W.'s scholarship. Died at Cambridge, Mass., in 1865.

WORDE, WYNKYN DE, one of the earliest English printers, was a native of Lorraine. Whether he was with Caxton at Bruges is open to question, but he was certainly for many years in the famous office at Westminster, and succeeded to the business on his master's death. About 1500 he removed to the city, and from 1502 till his death in 1534 he had his office at the sign of the 'Sun' in Fleet Street. He was appointed king's printer, enjoyed the patronage of Margaret, the mother of Henry VII., and attained a good position as a citizen of London. Though less scholarly than Caxton, W. did excellent service to his art. He was his own typefounder, and not only did he set the fashion of employing Roman letters as we now use italics, but he was the first to introduce Greek types into England, and in some of his works he inserted Hebrew and Arabic characters cut in wood. Of the four hundred and odd books which proceeded from his press it is enough to mention *Bartholomæus de Proprietatibus Rerum* (without place or date, but about 1495), which was the first book printed on English paper, and ranks as altogether his finest production; *Scala Perfectionis* (1493), *Bonaventuras Speculum Vitæ Christi* (1494), Trevisa's *Polichronicon* (1495). See Blade's, *Life of Caxton;* Bullen, *Caxton Celebration Catalogue* (Lond. 1877).

WORDEN, JOHN L., an American naval officer, born in New York City, March 12, 1818, and entered the navy in 1834. He commanded the *Monitor* in its famous fight with the Confederate ironclad *Merrimack*, March 9, 1862, and distinguished himself by his gallantry in the action, during which he was severely wounded in the eyes. He subsequently commanded the *Montauk* in several naval engagements.

WORNUM, Ralph Nicholson, an English art-critic and historian, was born at Thornton, Northumberland, December 29, 1812, and studied at University College, London. During 1834–39 he carefully examined the art-galleries of the Continent, and on his return to England contributed articles on his favorite subject to the *Penny Cyclopædia*, and to Dr. Smith's *Dictionary of Greek and Roman Antiquities*. In 1845 he was appointed to draw up the official catalogue of the National Gallery, became art-lecturer to the Government Schools of Design (1848), librarian to these schools (1852), and Keeper and Secretary of the National Gallery (1855). He died at Hampstead, December 15, 1877.

WORTH, William Jenkins, an American general, born at Hudson, N. Y., March 1, 1794. At the beginning of the war of 1812 he entered the army as a private, and was promoted captain and major for his gallantry at the battles of Chippewa and Niagara. He was at the close of the war retained in the regular service, was instructor at West Point, and commanded the Florida army in its campaign against the Seminole Indians. For his services in the Seminole war he was promoted brigadier-general. He participated in the Mexican war, and for gallantry at Monterey, was made major-general. He rendered valuable services at Cerro Gordo, Cherubusco, Molino del Rey, Chapultepec, and the capture of the city of Mexico. For his gallantry at Monterey, Congress voted him a sword of honor. After the war he was placed in command of the department of New Mexico and Texas. Died at San Antonio, Tex., May 7, 1849. His remains are buried at the junction of Broadway and Fifth Avenue, New York, and a handsome memorial monument is erected over them.

WOTT'ON, Sir Henry, born at Boughton Malherbe, Kent, England, March 30, 1568, was bred at Winchester, New College, and Queen's, and making the 'grand tour' (1589–97), met at Geneva Beza and Casaubon. Secretary to Essex, he fled, upon Essex's fall, to Tuscany (1600), whose Grand-Duke sent him disguised to Scotland, to warn James VI. of a plot to poison him. James, taking this 'honestest dissembler' into high favor, despatched him on embassies to most of the European courts, and at Venice W. formed a close friendship with Fra Paulo Sarpi, whose *Istoria del Concilio Tridentino* he transmitted to James, sheet by sheet, as it was written. Over-freedom of speech—his saying, namely, that an 'ambassador is a good man and true sent abroad to lie for his country's good'—caused W.'s disgrace, but in 1625 he received the provostship of Eton College, which, with angling and philosophy for recreation, he held till his death in December 1639. Author of poems and sundry treatises, as well as of many sage and quick apothegms, W. chose for his epitaph—'*Hic jacet hujus sententiæ primus auctor: Disputandi Pruritus sit Ecclesiarum Scabiés. Nomen alias quære.*' See a life by Izaak Walton prefixed to his edition of the well-known *Reliquiæ Wottonianæ* (1651).

WRIGHT, Silas, an American statesman, born at Amherst, Mass., May 24, 1795, was admitted to the bar in 1819, and settled at Canton, St. Lawrence Co., N. Y. After holding several important positions in his own state, he was in 1827 elected to Congress. He became U. S. Senator in 1834, and was chosen governor of New York in 1844. He was a successful lawyer and ranked high as a statesman. Died at Canton, N. Y., April 27, 1847.

WRY'NECK is a common deformity in children from spastic contraction of the sternomastoid muscle by which the head is drawn towards the shoulder, and the chin turned to the opposite side. The contracted muscle stands out strongly under the skin, and sometimes the size of the features on the affected side is strikingly less than on the opposite. If the deformity be neglected, the clavicle itself may yield and be curved upwards. The trapezius, scalene, and other muscles are involved, but to a less extent. W. is usually due to congenital causes, though it may not be noticed till some years after birth. The only effective treatment consists in the division of the sternomastoid muscle by two punctures. The head should be put well on the stretch, and the knife should be entered behind the clavicular fibres, about half an inch above the cavicle, and passed beneath the muscle. Then its edge is turned towards the fibres, and they are divided completely. The same operation is performed with the sternal tendon. The head is afterwards kept in position by a suitable apparatus.

WY'ANDOTTE, a town of Kansas, at the confluence of the Missouri and Kansas rivers, opposite Kansas city, has 8 churches, a State blind asylum, 2 weekly newspapers, &c. W. is an important railway junction, and the seat of great machine-shops, stock-yards, rolling-mills, and pork and beef packing-houses. The neighborhood is rich in coal, and the town has been lighted since 1867 by gas from a natural gas-well. Pop. 9000.

WYR'CESTRE, William, son of a Bristol burgess of the same name, was born in that city in 1415, entered Hart Hall (now Balliol College), Oxford, in 1432, where he remained four years, and afterwards became secretary and pursuivant to Sir John Fastolf, in commemoration of whose exploits he wrote the *Acta Domini Johannis Fastolf*, which Bale had seen and quotes, but which is now lost. He was one of Fastolf's executors, and the administration of the will brought him into controversy with Sir John Paston and others. The dispute was not settled till 1472. In 1473 he presented his friend, Bishop Waynflete, with a copy of an English version which he had made of Cicero's *De Senectute*, and which was published anonymously by Caxton. He died in Bristol about 1479. The twin passions of his life were literature and architecture. His chief works are the *Itineraria* (edited by Nasmith, 1778), and the *Annales Rerum Anglicarum*, 1324–1468 (edited by Hearne, 1771).

WYTT'ENBACH, Daniel Albert, born 7th August 1746 at Bern, Switzerland, studied at Marburg, Göttingen, and Leyden, and was successively professor of Greek at the Remonstrants' College at Amsterdam (1771), of philosophy at the Athenæum there (1779), and of eloquence at the University of Leyden (1799). Retiring in 1816, he resided first at Heidelberg, then at Leyden, and died at Œsgeest, 17th January 1820. W.'s writings are full of sound classical learning and criticism, expressed in pure and clear Latin. The chief are *Epistola Critica ad D. Ruhnkenium* (Gött. 1769); *Præcepta Philosophiæ Logicæ* (Amst. 1782); *Vita Ruhnkenii* (Leid. 1800); the *Bibliotheca Critica* (3 vols. Amst. 1777–1808); the *Philomathia seu Miscellanea Doctrina* (3 vols. Amst. 1809–17); his editions of Plato's *Phædo* (Leid. 1810, Leip. 1825) and Plutarch's *Moralia* (5 vols. 1795–1800), and the *Animadversiones* (3 vols. 1810–21). A collection of his *Opuscula Varii Argumenti* appeared after his death (2 vols. Leid. 1821); selections by Friedemann (Brunsw. 1825), as also of his *Index Gracitatis* (2 vols. Oxf. 1830), and his letters, *Epistolarum Selectarum Fasciculi Tres* (edited by Malme, Ghent 1830). See Malme, *Vita D. Wyttenbachii* (Ghent 1823).—Johanna W. (*née* Gallien), married to the above in his seventy-second year, lived after her husband's death chiefly in Paris, obtained the degree of doctor of philosophy from Marburg University in 1827, and died at Leiden in 1830. Of her writings the chief are *Théagène* (Par. 1815); *Das Gastmahl des Leontis* (Ulm 1821), and the novel *Alexis* (Par. 1823).

X.

XIN 'GU, a large river of Brazil, rises in the eastern spurs of the Serra Diamantina, near the heart of the country, and after flowing N. and N.E. for fully 1300 miles through a fertile, but undeveloped region, joins the Amazon 210 miles W. of Para.

XIPHOSU'RA, an order of *Crustacea*, represented solely by the king crabs or *Limuli*, found in the West Indian seas, and also in the East Archipelago. The front segments of the body are united to form a broad shield-like plate or *carapace* of convex shape, whilst the posterior portion is elongated to form a terminal, sword-like, spinous tail (*telson*), from the presence of which the name X., or 'sword-tailed,' has been given. On the upper and convex surface of the 'carapace' are placed the eyes, whilst the concave or under surface bears the locomotive and other appendages. In the limulus there are thirteen pairs of appendages, and of these, six pairs, in the form of legs, are attached round the margin of the oral aperture, the spines with which the basal or proximal joints of the legs are furnished subserving the function of a masticatory apparatus. Anteriorly, and in front of the mouth, a pair of chelate antennæ are also situated. The remaining feet are placed posteriorly on the abdominal surface in the form of broad plate-like structures, to which the respiratory organs are attached. The extinct group of the *Eurypterida* were closely related to the X. The two genera, *Pterygotus* and *Eurypterus*, are included in this group, the most familiar form being that of the *Pterygotus Anglicus*. Like the *Trilobites*, the *Eurypterida* are solely characteristic of the Palæozoic life period.

XYLO'BIUS (Gr. *xylon*, 'wood,' and *bios*, 'life'), a fossil genus of *Myriapoda* occurring in rocks of Carboniferous age, within the hollowed trunks of *Sigillaria*, one of the most characteristic trees of the Coal Epoch. X. had the power of rolling itself up for protection into a ball-shaped form.

Y.

YAK'UB BEG, surnamed *Khushbegi* ('lord of the family'), and *Atalik Ghazi* ('victorious guardian'), was born near Samarcand early in the present century. His lineage and race are doubtful, but he originally appears as chamberlain to Khudayar Khan, the Mohammedan conqueror of Khokand, then a Chinese possession. He became successively a commander of five hundred soldiers, governor of the Ak Musjid ('White Mosque'), on the Jaxartes, where in 1853 he stubbornly resisted the advance of the Russian general Perovsky, and governor of Kurama. At this time Y. B. had the reputation of being a brave soldier, an orthodox Mohammedan, and a stern disciplinarian. But he first rose to great eminence after the recovery of Kashgar from the Chinese in 1864. In the course of three years he had firmly established his power. For twelve years this remarkable man conferred on a large part of Central Asia the benefits of a settled though rigorous government. He 'drilled and disciplined a large civil staff. He presented to his subjects the spectacle about which Indian administrators now and then dream, of a monarch who held a public durbar to which the meanest had access, who received all kinds of petitions, who passed orders by a sort of instinct on piles of reports, who punished delinquent officials for malpractices, who whipped vagrants and beggars, drove idlers to say their prayers at mosques, checked sedition, and forced women to go about in modest veils.' In his foreign policy he was strongly anti-Russian, and ultimately friendly to Britain. In 1874 a commercial treaty was concluded between Y. B. and Sir Douglas Forsyth to develop intercourse between India and Kashgar, which has already produced considerable results. But in the spring of 1877 he was assassinated, though another account attributes his death to fever, and the fabric he had so laboriously raised fell to pieces almost immediately. The Chinese armies overran the country (1878) and Kashgar has again come under Chinese rule. See Demetrius Charles Boulger's *Life of Yacoob Beg, Ameer of Kashgar*, 1878.

YALE, ELIHU, born at New Haven, Conn., in 1648; removed with his father, to England, in 1658, and never returned to America. He went to India in 1678; was Governor of Fort St. George, Madras, and afterwards President of the East India Company. During his life he acquired a large fortune, and made numerous gifts to Yale College, Conn., which was named after him. Died in London, in 1721.

YANCEY, WILLIAM LOUNDES, an American statesman, born at Ogeechee Shoals, Florida, in 1814; received a liberal education at the North; became a lawyer at Abbeville, S. C., and removed to Alabama (1836); was engaged for some time in editorial work; became prominent in politics; was a member of Congress (1844–47); was an ardent advocate of pro-slavery doctrines and secession; represented the Confederate government in Europe, during the civil war, and was afterwards a member of the Confederate Congress. Died in South Carolina, in 1863.

YAQUIS, or HIAQUIS, a tribe of partially civilized indians, at Sonora, Mexico. They number about 20,000, are peaceably disposed, and are devoted to agriculture. Many of them are Roman Catholics.

YATES, RICHARD, born at Warsaw, Ky., in 1818; educated at Illinois College, and became a lawyer; was sent to congress by the Whigs (1851–55); was elected governor of the state of Illinois, in 1861, and in that position, was an energetic supporter of the national government during the civil war; and was U. S. Senator (1865–71). Died at St. Louis, Mo., in 1873.

YELL'OW THROAT (*Trichas Marylandica*), a species of warblers occuring in N. America. Its length is about 5 inches, and the color olive-green above, with a yellow breast and throat, the male exhibiting a black band on the forehead as part of its summer plumage. The nest is built on the ground, and the song is musical, but not very strong.

YEOLA, a town in Nassick district, Bombay Presidency, British India, 130 miles N.E. of Bombay. Pop. (1872) 17,461. It has special manufactures of silk and cotton cloth, woven on the hand-loom with elaborate designs, with broad borders of gold or silver thread.

YOO'SUFZYE ('children of Joseph'), a numerous Afghan tribe, on the N. W. frontier of India, occupying about 2000 sq. miles within the British district of Peshawur and also the hills beyond the N. boundary. Their total number is estimated at 246,000, including 73,000 fighting men. Of these 80,000 are British subjects; 800 are serving in the Bengal army, and 360 in the Punjaub irregular force. The crops of their territories are wheat, barley, millets, maize, cotton, and mustard-seed. The Y. export iron, cattle, and wool; and their transit trade is considerable. Those within British territory have become good subjects.

YORKTOWN, a village on York River, and in York Co., Va. In 1781 Lord Cornwallis was besieged here by American and French forces, commanded by Washington and La Fayette, and on Oct. 17, 1781, was forced to surrender. The force so surrendered consisted of 7,247 regular troops, and 840 sailors. During the civil war the Confederate general Johnston with a force of 53,000 men was here beseiged by a Union army, commanded by Gen. McClellan. On May 4, 1862, the confederates evacuated their works.

YOR'UBA, or YARR'IBA, a county of W. Africa, lying between the kingdoms of Dahomey, Benin, and Gando. Its northern portion, which is subject to Fulah Mohammedans, is open and well cultivated, resembling a great garden. To this region there succeeds, on the S., an undulating, wooded country, which in turn merges into the dense belt of primeval forests, which, as on the Gold Coast, separates the coast district from the interior. The coast natives are pagans of a debased type, but are improving under the efforts of missionaries. The total pop. of the country is estimated at about 3,000,000, and several of the towns are of large size. The chief are Abeokuta, Illori (60,000), Oyo, and Ibadan. The last is a walled town 18 miles in circumference, and with a pop. of 150,000. Palm-oil, cotton, and ivory are the staple products of the country, whose foreign trade is carried on chiefly through the British colony of Lagos.

YOUNG, CHARLES MAYNE, born January 10, 1777, was the son of a London surgeon eminent in his profession, but brutal to his family. During a visit to an uncle at Copenhagen, Charles so captivated the king that the monarch offered to educate and provide for him if he became a naturalized subject. This offer being declined, he was educated at Eton and the Merchant Tailors' School. After a short experience in a mercantile house, he went on the stage at Liverpool as Douglas in 1798. Next year he was engaged to 'lead' at Manchester. In 1804 he played lovers' parts in Liverpool with Miss Grimani, whom he married in that city, March 9, 1805. This lovely and estimable wife died in the following year. Charles Y. made his first appearance in London as Hamlet; and amid the tumultuous applause accorded to his performance the only hiss was that of his malignant father. Thenceforth he rivalled Kemble—some say, imitating him too much. His stately style, of what we call the Classical, though it is a highly artificial type, contrasted so well with Edmund Kean's that the two often played alternately in the same parts with much pecuniary gain. Up to 1829 he enjoyed uninterrupted favor on the stage and in society. In that year he was tempted to play in America by an offer of $60,000 for ten months. He declined the proposal, however, and at the age of fifty-three retired from his profession with a competency of $300,000. He died at Southwick, near Brighton, June 28, 1856. See *Life of Charles Mayne Y., by his Son, the Rev. Julian Y.* (2d ed. 1871).

YOUNGSTOWN, a city of Mahoning Co., O., on the Mahoning River. It has five railroads, and is engaged in iron manufactures, coal mining, and agriculture. It is also the center of a large trade. Pop. 24,000.

YPSILANTI, a town of Washtenaw Co., Mich., on the Huron River, at the junction of the Michigan Central and the Detroit & South-western Railroads, 30 miles from Detroit. It is surrounded by an agricultural district, and the river furnishes water-power for manufacturing. The State Normal School is located here. Pop. 6377.

YUMAS, a tribe of American Indians, occupying the territory along the Colorado River. The numbers of the tribe are small, and they now occupy a reservation assigned to them in 1865.

YU'THIA, the former capital of Siam, 40 miles N. of Bangkok, is almost encircled by the Méinan, whose fisheries furnish the town its principal employment. The German Mandelslohe in the 15th, and Portuguese Mendez Pinto in the 16th c., described the marvels of this 'Venice of the East;' but in 1768 it was razed to the ground by the king of Ava, and of its famous structures there only remains the 'Golden Mountain,' a neighboring pyramid 400 feet high, with a gilded colossal statue of Buddha. The modern town is the summer residence of many Bangkok merchants, and has an estimated pop. of 40,000, including many Chinese and Burmese.

Z.

ZAGAZIG, a town of Egypt, pop. 30,000. The ancient city was of great size, but nothing now remains of it but vast mounds. The position of two great temples can still be distinguished. From Z., as a center nearly all the railways of the Delta radiate.

ZE'A, Francisco Antonio, born at Medellin in Colombia, 20th October 1770, for sharing in a revolutionary movement was imprisoned at Cadiz, Spain (1797–99), but in 1805 became Professor of Botany at Madrid, and by Joseph Bonaparte was appointed Minister of the Interior and Governor of Malaga (1808–13). Retiring to S. America (1814), he joined Bolivar, and after rising to be Intendant-General of the forces, held the Vice-Presidency of Venezuela (1818–19). Ill-health, however, compelled him to revisit Europe, and having as minister-plenipotentiary concluded a Colombian loan of $10,000,000 with London bankers, he died at Bath, 22d November 1822.

ZEB'ULUN (Heb. 'dwelling') was the tenth son of Jacob (Gen. xxx. 20), and the tribe numbered 57,400 at the first census, and 60,500 at the second (Numb. i., xxvi.). The territory of Z. was one of the richest and most beautiful sections of the land of Canaan, stretching across the country almost from the Sea of Galilee on the E. to the plain of Phœnicia on the W. In after times the tribe was distinguished for its warlike spirit (*cf.* Jud. iv. 6, 10; v. 18), scientific skill (Jud. v. 14; 1 Chron. xii. 33), and commercial enterprise (Gen. xlix. 13; Deut. xxxiii. 18, 19).

ZEISBERGER, David, born in Moravia, in 1721; educated among the Moravians and joined their body; went to England and came from there to Georgia; went North and was one of the founders of Bethlehem, Pa. (1740); became an Indian missionary, and during the remainder of his life labored among various tribes with great success. Died in 1808. He published several religious and educational works in the language of the Delawares.

ZELKO'NA TREE, a name given to *Planera Richardi*, a large elm-like tree, native of the Orient. The timber is much prized, the heartwood when dry being exceedingly hard, capable of a fine polish, and is an excellent furniture wood.

ZELL, Karl, a well-known humanist, born at Mannheim, April 8, 1793, studied philology at Heidelberg, Göttingen, and Breslau, and became professor in the Rastatt Lyceum in 1814, and in the University of Freiburg in 1821. Here he founded a school of philology in 1830, and in 1835 was nominated to the ministerial council. In 1847 he became Professor of Archæology at Heidelberg, and from 1848 to 1853 he sat in the Second Chamber of Baden. At the diet of 1851 with Hirscher he exerted himself to promote the greater freedom of the Church. In 1855 he retired from his chair, and died at Heidelberg, January 24, 1874. His chief works are *Ferienschriften* (3 vols. Freib. 1826–23), *Handbuch der Römischen Epigraphik* (3 vols. 1850–57), and *Li-oba und die frommen Angelsächsischen Frauen* (Freib. 1860). He also published *Ueber die Ilias und das Nibelungenlied* (Karlsr. 1843), and his course of university lectures as *Opuscula Academica* (Freib. 1857).

ZENA'NA, or ZANA'NA (Pers. 'belonging to women'), that part of a house which among Hindus of good caste is set apart for the use of women. In Bengal a native gentleman's house consists of an outer and an inner part. Each of these is in the form of a quadrangle. The former, well furnished, with fine rooms, and windows looking out upon the public street, is for the use of the men; the latter, of a mean and even squalid appearance, is devoted to the women, who may go into each other's rooms, or take an airing in the courtyard, but must not be seen in public. From 50 to 100 Hindu ladies are sometimes gathered together in this dismal prison-house. Till about twenty years ago no Christian woman was permitted to enter a Bengal Z. The Rev. J. Fordyce was the first to organize the Z. Mission there, and Mrs. Mullens, an accomplished authoress in the Bengalee language, developed the system. In all the great centers of city and intellectual life in India, thousands of Hindu, and in some cases Mohammedan, ladies are now systematically taught in their own homes by Christian ladies, native, European, and American. A Government inspectress in many cases reports on the secular instruction imparted, and grants-in-aid are given accordingly. The sole difficulty is to train a sufficient number of vernacular Christian female teachers to meet the demand. Thus ever-increasing efforts are being made to reach the Hindus of the next generation by bringing the light of the gospel to brighten the cheerless hearths of Hindu mothers.

ZENICK (*Suricata Zenick*), a species of Carnivorous quadruped, allied to the Ichneumon, and also named the 'Suricate.' It is found in S. Africa, attains a length of 18 inches, and resembles a weasel, but has longer legs. The color is a greyish brown, marked on the back with cross bands of darker hue. The muzzle is sharp and the tail long, but sparsely covered with hairs. The Z. may be domesticated, and is a dreaded enemy of rats and mice. It also feeds on fruits.

ZERBST (Wend. 'belonging to the Sserbski'), a town of Germany, Duchy of Anhalt, formerly capital of the principality of Anhalt-Z., on the Nuthe, 26¼ miles S.E. of Magdeburg by rail. The chief buildings are the Nikolaikirche, dating from the 15th c.; the great Schloss, surrounded with a park; and the stately old Rathhaus, dating from the 15th c., but disfigured by additions in 1610, standing in the market-place, in the center of which are the Roland Column (1445), and the Butterjungfer, a slender column bearing a female figure. Z. contains a gymnasium of high repute —the Franciscenm—and has manufactures of silks, plush, cloth, leather, gloves, gold and silver lace, soap, starch, essences, tobacco, chemicals, pottery, umbrellas, musical instruments, and machinery. Gardening, iron-founding, and beer-brewing are also carried on. Pop. (1875) 12,877.

ZE'RO, in physics, is any convenient point with reference to which quantitatively estimable phenomena of the same kind are compared. Thus, on the centigrade scale, the Z. of temperature is chosen as the temperature of freezing water; while the absolute Z. of temperature is a point determined by thermodynamic principles. In electricity any object is at Z. potential when it is in contact with and is at the same potential as the earth. A Z. has the essential characteristics of what is known in analytical geometry as the origin.

ZEUSS, Johann Kaspar, the founder of Celtic philology, was born at Vogtendorf in Oberfranken, Bavaria, July 22d, 1806. From the Lyceum at Bamberg he passed to the University of Munich, where he devoted himself to philology and history. In 1839 he became professor of history in the Lyceum at Speier, and in 1847 in that at Bamberg. He died at Vorstendorf, near Kronach, Nov. 10th, 1856. His historical works are, *Die Deutschen und die Nachbarstamme* (Münch. 1837), *Die Herkunft der Bayern von den Markomannen* (1839), *Traditiones Possessionesque Wizenburgenses* (Speier, 1842), *Die freie Reichsstadt Speier vor ihrer Zerstörung* (1843). His great work is his *Grammatica Celtica* (2 vols. Leip. 1853; 2d ed. by Ebel, Berl. 1868–71), which for the first time placed Celtic philology on a scientific basis.

ZIB'ETH (*Viverra Zibethia*), a species of *Viverridæ* or civets found in E. Asia, and attaining a length of from 3 to 4 feet. The color is a brown mixed with white, and marked with spots and blotches of darker hue. The Z. has a musk-secreting pouch resembling that of its African neighbor the true civet (*Viverra civetta*).

ZIE''THEN, or ZIE'TEN, Hans Joachim von, one of the bravest and most popular generals of Friedrich the Great, was born at Wustran, May 18, 1699, entered the Prussian service in 1714, retired in 1724, but re-entered it as a lieutenant in 1726. A quarrel with his captain next brought him a year's imprisonment and his dismissal from the service. Restored to his rank in 1730, he became captain in 1731, and major in 1736. In 1741 he became colonel of a regiment of hussars, and in this capacity did much to increase the efficiency of the Prussian light cavalry. At the outbreak of the Second Silesian War (1744), at the head of the advanced guard he entered Bohemia, advanced to Budweis, then achieved a dexterous retreat behind the Elbe, inflicting a signal defeat on a force of 16,000 men at Moldau-Tein, 12th October. In 1745, at Jägerndorf, he led his regiment, which wore a uniform similar to that of an Austrian regiment of hussars, through an Austrian force of 20,000, in order to carry to the Markgraf Karl the orders of the king, and took an active part in the battles of Hohenfriedberg (June 4th) and Hennersdorf (November 23), soon afterwards being made major-general. During the peace he fell under the displeasure of the king, but was forgiven at the outbreak of the Seven Years' War, and appointed a lieutenant-general. He took part in the battles at Reichenberg and

Prague, commanded the left wing at Kollin, next remained near the Prince von Bevern, who wished to cover Lausitz and Schlesien, and on his defeat and capture, led the remnant of his army to join the king at Liegnitz. In the battle of Liegnitz (August 15, 1760) he held back the Austrian main army during the struggle before the camp, for which on the field of battle he was made general of cavalry. At Torgau he carried the Siptitz Heights, and thus decided the victory. In the spring of 1761 Z. watched the Russians, who, however, declined to give him battle. From this time until the close of the war he remained with the king, holding during his absence the supreme command. After the war he lived chiefly at Berlin, enjoying the especial favor of Friedrich, who was a frequent visitor of his 'old father Z.' He died at Berlin, January 26, 1786. A monument was erected to him at Berlin in 1794 by Friedrich Wilhelm II. His life has been written by Luise Joh. Leopold von Blumenthal (3d ed. Berl. 1806), and Hahn (5th ed. Berl. 1878).

ZIPH'IUS, a genus of whales belonging to the family of the *Rhynchoceti*, or 'Beaked whales.' Z. occurs in the Mediterranean Sea and S. Atlantic. The snout is pointed, there is a single blowhole, and a small dorsal fin is developed. There are no teeth in the upper jaw, but the lower jaw is provided with from 1 to 2 pairs. *Z. Sowerbiensis* is a familiar species. The average length is 16 feet.

ZIRCO'NIA LIGHT, an intensely brilliant light differing from the Drummond Light mainly in the employment of cones of the oxide of zirconium instead of the less durable cylinders of lime. In 1867 Tessié du Motay introduced the Z. L. into Paris, and it was there employed for several years to illuminate squares and public buildings and gardens. The cones were formed of burnt zirconia kneaded into a paste with aqueous boracic acid, and hardened in iron moulds at a red heat, and a mixture of oxygen and a highly carburetted gas was burnt to raise the cones to incandescence. The Z. L. was also some time used as an illuminant in public places of Brussels and Vienna, and in America in lighthouses and public works. The construction of the Brooklyn Bridge over East River, New York, was conducted by night under the radiant light from zircon cones acted on by oxygen. The Z. L. has been practically superseded by the electric light.

ZNAIM, a town of Moravia, Austria, on the Thaya, 50 miles N. by W. of Vienna by rail. It has a Rathhaus (1446), a circular church, said to have been a heathen temple, and the Gothic Church of St. Nicholas. The old ducal castle crowns a neighboring height. The trade is largely agricultural. Mustard, wine, and cucumbers are exported, and there are large potteries, at which fine Majolica is produced. Leather and chocolate are also manufactured. New waterworks were opened in 1877. Pop. (1869) 10,415. Formerly *Znoimo*, under which name it was the capital of Moravia, Z. was destroyed in 1145 by the Bohemian prince Vladislav, but was rebuilt in 1226. On 11th July 1809 the French under Massena and Marmont defeated the Austrians here, and from 13th July to 3d September 1866 it was held by the Prussians.

ZOANTHAR'IA, an order of *Actinozoa*, in which the sea anemones and most of the corals are contained. The tentacles and soft parts exist in multiples of 5 or 6. The Z. are divided into the *Z. malacodermata* (sea-anemones, &c.), *Z. sclerobasica* (*Antipathes*), and *Z. sclerodermata* (reef-building corals).

ZO'LA, Emile, born in Paris, 2d April 1840, is the son of an Italian engineer. Bred in Provence and educated at the Parisian Lycée Saint-Louis, he turned from bookseller a novelist, producing *Contes à Ninon* (1864), *La Confession de Claude* (1865), *Le Voeu d'une Morte* (1866), *Les Mystères de Marseille* (1867), &c., titles that indicate the scope of one who may fairly be called a realist of the foulest water. An immense success has attended his series, *Les Rougon-Macquart, histoire naturelle et sociale d'une famille sous le second Empire* (7 vols. 1874–77), the last volume of which, *L'Assommoir*, was dramatized by Charles Reade under the title *Drink* (1879). Z. himself brought out two comedies, *Club* and *Le Bouton de Rose*, in 1878, with small success.

ZONA'RAS, Joannes, a Byzantine writer of the 12th c. A.D., born at Constantinople, held various high offices at the courts of Alexius and Joannes Comnenus, but afterwards withdew to a monastery on Mount Athos, where he died at the age of eighty-eight. His *Chronicon*, from the creation to 1118 A.D., is valuable as preserving many fragments of perished histories, and was last edited by Dindorf (6 vols. Leip. 1868–75), and his Commentaries were edited by Beveridge (Oxf. 1672). He was also the reputed author of several other works, among them a Greek Lexicon (ed. by Tittman, 2 vols. Leip. 1808).

ZO'ÖIDS (Gr.), the name given to the beings produced by a sexual processes of *gemmation*, or budding, or by *fission*. The Z. collectively make up a compound 'individual'—as for example in a Zoophyte where the whole organism, including its hundreds of animals, is an 'individual' animal, its constituent elements being named '*zoöids*.'

ZOOT'OCA (Gr. *zootokos*, 'producing young alive'), a genus of lizards included in the family *Lacertidæ*, and represented by the *Z. vivipara*, the Viviparous or Scaly lizard, which, with the *Lacerta agilis* or Sand lizard, are the only members of the Lizard group inhabiting Britain. The viviparous lizard is common on heaths and in grassy places. It attains a length of 6 inches; the color is olive-brown above, with a dark line passing along the spine. The under parts are orange, marked with black in the male, and olive-brown in the female.

ZUCC'ARO, Federi'go, an Italian painter, born in 1543, was intrusted by Pope Gregory XIII. with the completion of the pictures in the Pauline Chapel, begun by Raphael. Falling into disgrace, however, he went abroad, and spent several years in Flanders, Holland, and England, where he painted portraits, among others, those of Queen Elizabeth and Mary Stuart. In 1582 he was employed in adorning with pictures the palace of the Doge of Venice. He founded the Academy of San Luca, was called to Spain in 1588 to decorate the Escurial, but soon returned to Italy, where he died in 1609. Both Federigo and his brother Taddeo (born 1529, died 1566), in spite of their artistic merits, are examples of the decadence of Italian art in the latter half of the 16th c., of its lack of originality, genuineness and power.

ZUMPT, Karl Gottlob, a well-known classical philologist, was born at Berlin, March 20, 1792, entered the University of Heidelberg in 1809, studied afterwards at Berlin, and became in 1827 extraordinary and in 1836 ordinary professor of Roman literature at the latter. In 1831 he traveled in Italy and in 1835 in Greece. He died at Karlsbad, June 25, 1849. Z. is best known by his *Lat. Grammatik* (Berl. 1818; 13th ed. 1874). His other works are *Annales Veterum Regnorum et Populorum* (1819; 3d ed. 1842); *Ueber den Röm. Ritterstand* (1839); *Ueber den Stand der Bevölkerung und die Volksvermehrung im Alterthum* (1841); *Ueber den Bestand der Philosophischen Schulen in Athen und die Succession der Scholarchen* (1843); *Ueber die bauliche Einrichtung des Röm. Wohnhauses* (1844; 2d ed. 1851); *Die Religion der Römer* (1845); *Ueber die Persönliche Freiheit des Röm. Bürgers und die Gesetzlichen Garantien derselben* (Darmst. 1846); and his editions of Quintilian (Leip. 1831), Curtius (Berl. 1826), and Cicero's *Orationes in Verrem* (2 vols. 1831), and *De Officiis* (Braunsch. 1838). See his nephew's *De C. Tim. Zumptii Vita et Studiis Narratio* (Berl. 1851).—August Wilhelm Z., nephew of the preceding, was born at Königsberg, December 4, 1815, in 1833 entered the University of Berlin, and became in 1851 professor at the Friedrich-Wilhelm gymnasium there. He died at Berlin, April 23, 1877. His chief works are *Commentationes Epigraphicæ* (2 vols. Berl. 1850–54); *Studia Romana* (1859); *Das Kriminalrecht der Röm. Republik* (2 vols. 1865–69); *Das Geburtsjahr Christi* (Leips. 1869); and *Der Kriminalprozess der Röm. Republik* (Berl. 1871).

ZUNZ, Leopold, the Nestor of modern Hebrew scholarship, was born at Detmold, Germany, 10th August 1794, and after some years in Wolfenbüttel gymnasium, studied philology at Göttingen and Berlin. Preacher at the New Berlin Synagogue (1820–22) and joint-editor of the *Spener'sche Zeitung* (1824–32), he also directed the Jewish School (1825–29), and after a visit to Prague (1835), the new Normal Seminary (1839–50). In 1845 he became a member of the Commission for the Education of Jews in Prussia. Among his numerous works are *Etwas über die rabbinische Literatur* (1818), *Die Gottesdienstlichen Vorträge der Juden* (1832); *Die synagogale Poesie des Mittelalters* (1855), *Literaturgeschichte der synagogalen Poesie* (1869), &c., republished in his *Gesammelte Schriften* (3 vols. Berl. 1875–76).

End of American Supplement.

BIOGRAPHY OF EMINENT AMERICANS.

ALLERTON, Isaac, was the fifth of the noble band who signed a constitution of government in the cabin of the *May Flower*, at Cape Cod. He survived the terrors of the first winter in New England, afterward became the agent of the settlers in negotiating the purchase of the new possessions from those of the company in London, who had furnished capital for the enterprise; and, as an enterprising trader, became the founder of the commerce of New England. He was accompanied in the *May Flower* by his wife and four children. The time and place of his death is not known, some asserting that he returned to England, and others that he died in the city of New Amsterdam (New York) in 1659.

ANDERSON, Richard Clough, was born at Louisville, Ky., August 4, 1788. He graduated at William and Mary College, studied law under Judge Tucker, and commenced its practice in his native town, then rapidly swelling toward the proportions of a city. He soon stood in the front rank of his profession as an able counsellor and eloquent advocate. Political life presented a high road to fame, and friends and ambition urged him to travel it. For several years he was a member of the Kentucky legislature; and, in 1817, he was elected to a seat in the Federal Congress, where he continued four years. It was a period of great excitement in that body, for, during A.'s membership, the admission of Missouri was the topic for long and angry debates. In these he took a prominent part, and was highly esteemed for his manly and conciliatory course. His constituents were anxious to reëlect him, in 1822, but he declined the honor, because he considered his services to be more valuable, at that juncture, in the legislature of his own State, to which he was elected. He was chosen Speaker of the Assembly, but did not preside in that body long, for, in 1823, President Monroe appointed him the first United States minister to the new Republic of Colombia, South America. There he was received with joy and great honor, and during his residence at Bogota, the capital, he won for himself and family the unaffected love and esteem of all classes. In 1824, he negotiated an important treaty. In 1826, President Adams appointed him envoy extraordinary and minister penipotentiary to the diplomatic Congress held at Panama, to consider the welfare of the South American Republics. On his way thither he was taken ill at the village of Tubaco, where he died, on the 24th of July, 1826, at the age of thirty-eight.

BALDWIN, Thomas, one of the most eminent lights of the Baptist Church in America, was born at Bozrah, Conn., Dec. 23, 1753. When he was sixteen years of age his parents went to Canaan, then a frontier town in New Hampshire, to reside, and there his youth was spent in the laborious vocation of a blacksmith. Only a few books could then be obtained, yet so thoroughly did he study all that fell in his way, that, when arrived at manhood, he possessed a stock of miscellaneous knowledge much greater than that of most young men of his time. He was ordained for the Christian ministry in the summer of 1783; and at about the same time he was elected to a seat in the Connecticut legislature. He soon declined political office, because it interfered with his ministerial labors. The fame of B., as a zealous preacher, was soon in all the churches; and, in November, 1790, he was installed pastor of the Second Baptist Church, in Boston. In 1803, the Faculty of Union College, New York, conferred upon B. the degree of Doctor of Divinity; and the same year he commenced the publication of the *American Baptist Magazine*. He was its sole editor until 1817, and senior editor until his death. It was a powerful auxiliary in his hands, in promoting the growth of the Baptist Church in this country; and, for a long time, it was the only publication issued by that denomination on this side the Atlantic. He died on the 29th of August, 1825, at the age of seventy-two.

BARD, Samuel, was the son of an eminent physician, in Philadelphia, where he was born on the 1st of April, 1742. He was graduated at Columbia College, in 1761, and the same year he went to Europe, to obtain a thorough medical education. He was absent in France, England, and Scotland, five years; and such was his skill in Botany, that he obtained the annual medal given by Professor Hope, at Edinburgh, for the best collection of plants, in 1765. He there received his degree, returned home, and entered into partnership with his father. He made New York his residence the same year, and there he formed and executed the plan of founding the Medical School of New York, where degrees were conferred in 1769. In 1813, he was elected president of the College of Physicians and Surgeons, of New York, and held that office until his death, which occurred on the 24th of March, 1821, at the age of seventy-nine.

BARNEY, Joshua, was born in the city of Baltimore on the 6th of July, 1759. He made several sea voyages while yet a lad, and at the beginning of the War for Independence, he entered the sloop, *Hornet*, as master's mate, and accompanied the fleet of Commodore Hopkins to the West India seas, in 1775. He was at the capture of New Providence, and for his bravery there was promoted to a lieutenantcy. In 1782, he was placed in command of the *Hyder Ally*, of sixteen guns, belonging to the State of Pennsylvania. In April, of that year, he captured the British ship, *General Monk*, after an action of twenty-six minutes. This vessel was bought by the United States, and in September, it sailed for France, with Barney as commander, who bore dispatches for Dr. Franklin, at Paris. In that vessel he brought back the French loan to the United States in chests of gold and barrels of silver. Peace soon came, and he left the service, for awhile. In 1796, Captain B. went to France, with Mr. Monroe, as the bearer of the American flag to the National Convention. Commodore B. was among the most efficient commanders in service, when the United States declared war against England in 1812; and the following year, he had charge of a flotilla in

the Chesapeake Bay for the protection of the coast. When the British invaded Maryland, and pressed forward toward Washington City, near the close of the summer of 1814, B. abandoned his flotilla, and with his marines, engaged in a battle with the enemy at Bladensburg, where he was wounded in the thigh by a musket ball, which was never extracted. He died on the 1st of December, 1818, at the age of fifty-nine.

BARTLETT, Josia, was born at Amesbury, Massachusetts, in November, 1729. He was a maternal relative of Daniel Webster, and, like that statesman, he arose to eminence by the force of his own character, without the factitious aid of wealth or family influence. He lacked a collegiate education, but having acquired a knowledge of Greek and Latin in the family of a relative, he was prepared for the study of medicine, his chosen profession. He commenced its practice at Kingston, New Hampshire, was skilful, and soon acquired a moderate fortune. In 1774, he was a member of the general Committee of Safety. The appointment of that committee alarmed the governor. He dissolved the Assembly; but the members, with Dr. B. at their head, reassembled, and, like those of Virginia, appointed delegates to the Continental Congress. One of these was B. Wentworth soon afterward took away his magistrate's and military commissions; but the governor, in turn, was speedily deprived of his office, and became a fugitive. B. was re-elected to Congress, in 1775, and was one of the committee chosen to devise a plan for a confederation of the States. He earnestly supported the proposition for independence, and was the first man to sign it, after John Hancock. He remained in Congress until 1778, when he obtained leave to return home and superintend his deranged private affairs. He did not again resume his seat in that body, for the following year he was appointed chief justice of the Court of Common Pleas of his native State. He was afterward raised to the bench of the Superior Court; and was very active in favor of the Federal Constitution. The legislature elected him first United States Senator, under the new government, but he declined the honor, having been previously chosen president, or governor of New Hampshire. That office he held, by successive election, until 1794, when he retired to private life. He died on the 19th of May, 1795, in the sixty-sixth year of his age.

BARTON, William, was born in Providence in 1750. He passed through the several grades of office, until, in 1777, he held the commission of lieutenant-colonel of militia, and performed good service in preparations for driving the British from Rhode Island. General Prescott, an arrogant, tyrannical man, was the commander-in-chief of the enemy there, and the people suffered much at his hands. They devised various schemes to get rid of him, but all failed until a plan, conceived by Colonel B., was successfully carried out. Prescott's head-quarters were at the house of a Quaker, five miles north of Newport. On a sultry night in July, 1777, B., with a few trusty followers, crossed Narragansett Bay from Warwick Point, in whale boats, directly through a British fleet, and landed in a sheltered cove a short distance from Prescott's quarters. They proceeded stealthily in two divisions, and secured the sentinel and the outside doors of the house. Then B. boldly entered, with four strong men and a negro, and proceeded to Prescott's room on the second floor. It was now about midnight. The door was locked on the inside. There was no time for parley. The negro, stepping back a few paces, used his head as a battering-ram, and the door flew open. Prescott, supposing the intruders to be robbers, sprang from his bed and seized his gold watch. The next moment B.'s hand was laid on his shoulder, and he was admonished that he was a prisoner, and must be silent. Without giving him time to dress, he was conveyed to one of the whale-boats, and the whole party returned to Warwick Point, undiscovered by the sentinels of the fleet. Prescott's mouth was kept shut by a pistol at each ear. The prisoner first spoke after landing, and said, "Sir, you have made a bold push to-night." B. coolly replied, "We have been fortunate." At sunrise the captive was in Providence, and in the course of a few days he was sent to the head-quarters of Washington, in New Jersey. For this brave service, Congress presented their thanks and an elegant sword, to lieutenant-colonel B., and in December following, he was promoted to the rank and pay of colonel in the Continental army. He was also rewarded by a grant of land, in Vermont. In the action at Butt's Hill, near Bristol Ferry, in August, 1778, Colonel B. was so badly wounded, that he was disabled for the remainder of the war. In after years, the grant in Vermont proved to be an unfortunate gift. By the transfer of some of it he became entangled in the meshes of the law, and was imprisoned for debt, in Vermont, for many years, in his old age. When La Fayette was "our nation's guest," in 1825, he heard of the situation of his old companion-in-arms, paid the debt and set him at liberty! Colonel B. died at Providence, in 1831, at the age of eighty-four years.

BARTRAM, John, was the first American who conceived the plan of establishing a botanic garden for American plants and vegetables. He carried his plan into execution, by devoting about six acres, near Philadelphia, to the purpose. He traversed the country in every direction, from Canada on the north to Florida on the south, in search of new productions, and his garden was enriched and beautified by the results of his explorations. His philosophical knowledge attracted the attention of learned and scientific men, at home and abroad, and with these his intercourse became extensive. He sent many botanical collections to Europe, and their beauty, novelty, and admirable classification, won universal applause. Literary and scientific societies of London, Edinburgh, Stockholm, and other cities, placed his name among those of their honorary members; and finally, George the Third of England appointed him "American Botanist to his Majesty." He held that honorable position until his death, which occurred in September, 1777, when he was in the seventy-sixth year of his age.

BAYARD, James A., was born in the city of Philadelphia, on the 28th of July, 1767. His studies were completed in the College at Princeton, New Jersey, where he was graduated with the highest honors, in 1784, at the age of seventeen years. He chose the profession of law, studied it with great assiduity, under General Joseph Reed and Jared Ingersoll, and was admitted to the bar, in August, 1787. In 1796 he was a successful Federal candidate for a seat in Congress, where he first appeared in May, 1797. There he was noted for his industry, integrity, and consistency; and during his services as a member of the House of Representatives, from 1797 until 1804, no man was more highly esteemed for talents and personal worth than B. When, in the winter of 1801, the choice between Jefferson and Burr, the Republican candidates for president of the United States, devolved upon the House of Representatives, and B. and three other Federal members held the choice in their own hands, his colleagues submitted the matter to his judgment, and he fortunately gave the office to Jefferson. A few days afterward President Adams appointed B. minister plenipotentiary to France, but he patriotically declined it for political reasons. In 1804, he was elected to a seat in the United States Senate, to fill a vacancy; and, in February, 1805, he was re-elected for the full term of six years. In that body, also, he was an esteemed leader; and, in 1811, the legislature of Delaware again elected him United States Senator, for another full term. He opposed the declaration of war against Great Britain, in 1812, but, when a majority in

Congress gave sanction to the measure, he cheerfully acquiesced, and, it is said, actually labored with his own hands in the erection of defences at Wilmington, where he resided. In 1813, the emperor of Russia offered his mediation between the United States and Great Britain, and B. and Albert Gallatin were sent to St. Petersburg to negotiate. There they remained six months, when, hearing nothing from England, they proceeded to Amsterdam. They arrived in that city in March, 1814. There they were informed that England would not accept the mediation of Russia, but was ready to treat for peace with the United States. They were also informed that Messrs. Adams, Clay, and Russell, had been added to the commission. All finally met with the British commissioners at Ghent, in August, 1814, where they remained until the 24th of December following, when a treaty was agreed upon and signed. Fourteen days afterward, B. left Ghent for Paris; and on the 4th of March, 1815, while in that city, he was seized with a fatal, but lingering disease. He died on the 6th of August, 1815, when a little more than forty-eight years of age.

BLAND, Richard, was one of the committee to prepare a remonstrance with parliament, in 1768; and in 1773, he was one of the first general committee of correspondence, proposed by Dabney Carr. He was chosen a delegate to the first Continental Congress in 1774, but declined the appointment the following year, because, as he said, he was "an old man, almost deprived of sight." Francis Lightfoot Lee, who signed the Declaration of Independence the following year, was appointed in his place; and three years afterward, the aged patriot went to his final rest.

BOUDINOT, Elias, was born in Philadelphia, on the 2d of May, 1740. He inherited a love of freedom and religious devotion from his Huguenot ancestors, and when the colonists began to question the right of Great Britain to tax them without their consent, he took a stand for his countrymen. He had received a classical education, studied law with Richard Stockton, one of the signers of the Declaration of Independence, and married that patriot's sister. B. practiced his profession in New Jersey, and soon rose to distinction. In 1777, he was appointed commissary-general of prisoners, by Congress, and the same year he was elected to a seat in the Continental Congress. In November, 1782, he was elected president of that body, and in that capacity he signed the preliminary treaty of peace with Great Britain. At the close of the war he resumed the profession of the law, but was again called into public life in 1789, by an election to a seat in Congress, under the Federal Constitution. In 1812, he was elected a member of the American Board of Commissioners for Foreign Missions, to which he made a donation of five thousand dollars; and when he was elected president of the American Bible Society, in 1816, he gave that institution ten thousand dollars. He died at Burlington, on the 24th of October, 1821, eighty-one years of age.

BOWDOIN, James, was born in Boston on the 18th of August, 1727. His grandfather fled from France in 1685, and came to America by way of Ireland, two years later, and settled at Falmouth (now Portland) in Maine. James was the son of an eminent merchant, and was educated at Harvard College, where he was graduated in 1745. He was remarkable for his application, while a student, and his deportment was always correct. He had just laid the foundation of a good character, when, at the age of twenty-one years, his father died, and left him an ample fortune. In 1749, he commenced a system of literary and scientific research. He was elected to represent Boston in the General Court, in 1753, where his learning and eloquence soon made him a conspicuous leader. He was chosen a delegate to the first Congress in 1774, but the illness of his wife prevented his attendance. The following year he was chosen president of the council of Massachusetts, and he held that important office most of the time until the adoption of the State Constitution in 1780. He was president of the convention which formed that instrument; and in 1785, when John Hancock resigned the chair of chief magistrate of the State, B. was chosen to succeed him in office. It was during his administration that the troubles, known as *Shay's Rebellion*, took place in Massachusetts. By his orders, four thousand troops were placed under the command of General Lincoln, to suppress the insurrection; and he was one of the largest contributors to a voluntary subscription of money, which was raised in Boston, within a few hours, to pay the expenses of the troops. He was a member of the Massachusetts convention, called to deliberate on the Federal Constitution, and he gave that instrument his hearty support. Governor B. was a patron of letters. He subscribed liberally for the restoration of the library of Harvard College, destroyed in 1764; and from 1779 till 1784, he was a fellow of the corporation. In 1780, he was instrumental in founding the American Academy of Arts and Sciences, in Boston; and his fostering care was given to other societies, humane and scientific. The University at Edinburgh conferred upon him the degree of Doctor of Laws, and he was chosen a member of the Royal Societies of London and Dublin. He died at Boston, in 1790, at the age of sixty-three.

BOYLSTON, Zabdiel, M.D., introduced the practice of inoculation for the small-pox, at Boston. He was a man of courage and benevolence; a native of Brookline, Massachusetts, where he was born in 1680. He studied medicine and surgery at Boston, and soon became an eminent practitioner and man of fortune. His attention was first called to the subject of inoculation by Dr. Cotton Mather, who had read an account of its successful practice at Smyrna, in the East. The small-pox was then raging with fearful fatality in Boston; but of all the physicians there, B. was the only one who possessed sufficient courage to try the experiment. On the 26th of June, 1721, he inoculated his little son, aged six years, and two servants. He was successful, and began to enlarge the practice. The other physicians opposed him, and in the course of the next month the selectmen of Boston forbade its practice. At that moment six venerable clergymen of the city gave their influence in its favor, and benevolence and good sense triumphed over prejudice and ignorance. In the course of a year he inoculated two hundred and forty-seven persons in Boston; and of two hundred and eighty-six inoculated by himself and physicians in neighboring towns, only *six* died, while of five thousand seven hundred and fifty-nine persons who had the small-pox the natural way, *eight hundred and forty-four* died. Notwithstanding this triumphant vindication of the utility of the practice, B. was mercilessly persecuted by other physicians; and the common people became so exasperated against him, that it was unsafe for him to be seen out after dark. They went so far at one time, as to parade the streets with halters, declaring their intention to hang him, and those who submitted to his practice were grossly insulted. Dr. Mather and others adhered to him, and he triumphed. He died on the 1st of March, 1766.

BRADFORD, William, was a Quaker, and native of Leicestershire, England. He learned the printer's trade in London, and married the daughter of his master, through whom he became acquainted with George Fox, the founder of his sect. The Almanac printed by him was for the year 1687, and was made at Burlington, New Jersey. He printed several controversial pamphlets, and among them was one by George Keith against some of the Quakers of Philadelphia. It was deemed seditious, and Keith and B. were arrested and imprisoned, in 1692. They were tried and acquitted; but having incurred the ill-will of the dominant party of Quakers, B. took up his residence in New York the

following year, where he was appointed government printer, and for a period of about thirty years he was the only practitioner of his art in that province. His first production was a folio volume of laws of the province. In the autumn of 1725, B. commenced the publication of the first newspaper printed in that colony, which he called *The New York Gazette*. John Peter Zenger, one of his apprentices, became a business competitor in 1726; and in 1733 he, too, published a newspaper, called *The New York Weekly Journal*. Much enmity existed between them, and their respective papers became the organs of the two political parties then existing in New York. B. always supported the government party, while Zenger spoke boldly for the people. He owned a paper-mill at Elizabethtown, New Jersey, in 1728, which is believed to have been the first one established in America. He died on the 23d of May, 1752, when he was ninety-four years of age.

BROOKS, John, was born at Medford, Mass., in 1752. At the age of fourteen years he was apprenticed to Dr. Simon Tufts. He commenced the practice of medicine at Reading, and then, in 1774, he took command of a company of minute-men. With these, he assisted in annoying the British forces in their retreat from Concord, on the 19th of April, 1775, and soon afterward he was commissioned a major in the army that gathered around Boston. He assisted Prescott in throwing up the redoubt on Breed's Hill, but was absent on duty during the battle the next day. He remained with the Continental army at Boston, until the following year, and then participated in the battles on Long Island and at White Plains. He was with Arnold in his expedition against St. Leger, at Fort Schuyler, on the Mohawk, in 1777, and bore the commission of lieutenant-colonel. Washington always had the greatest confidence in his integrity and patriotism; and in the crisis at Newburgh, in the spring of 1783, when sedition and mutiny appeared rife, the commander-in-chief made B. his special confidant. When war with England was declared in 1812, General B. was appointed adjutant-general of Massachusetts, by Governor Strong; and in 1816, he succeeded that gentleman as chief magistrate of his native State. He died on the 1st of March, 1825, at the age of about seventy-three.

BROWN, Jacob, was a native of Bucks county, Pennsylvania, and the son of Quaker parents. He was born on the 9th of May, 1775. He was well educated. From eighteen to twenty-one years of age he taught a school at Crosswicks, in New Jersey. Then, for about two years, he was employed as a surveyor in the vicinity of Cincinnati; and, in 1798, he was teaching school in the city of New York. There he commenced the study of law, but finding it not congenial to his taste, he abandoned it, purchased some wild land in the present Jefferson county, near the foot of Lake Ontario, and settled upon it, in 1799. He pursued the business of a farmer with skill and industry; and, in 1809, he was appointed to the command of a regiment of militia. The governor of New York commissioned him a brigadier, in 1811; and when, the following year, war with Great Britain commenced, he was intrusted with the command of the first detachment of New York militia, which was called into the service of the United States, and charged with the defence of the frontier, from Oswego to Lake St. Francis, a distance of almost two hundred miles. In October of that year, he gallantly defended Ogdensburg, with only about four hundred men, against eight hundred Britons. At the expiration of his term, the government offered him the commission of colonel in the regular army, but he declined it. In the Spring of 1813, he drove the enemy from Sackett's Harbor. In his operations there he displayed so much judgment and skill, that Congress gave him the commission of a brigadier-general in the Federal army. In the autumn of that year he was active and efficient on the banks of the St. Lawrence; and after the retreat of the American troops from Canada, in November, the illness of General Wilkinson made the chief command devolve upon General B. Toward the close of January, 1814, he was promoted to major-general, and he was assiduous during the few weeks preceding the opening of the campaign for that year, in disciplining the troops and giving them encouragement. He was ordered to the command on the Niagara frontier, in the spring of 1814, and during the succeeding summer and autumn he won imperishable honors for himself and country. For his gallantry and good conduct in the successive battles of Chippewa, Niagara Falls, and Fort Erie, he received the thanks of Congress and a gold commemorative medal, and the plaudits of the nation. He was twice severely wounded in the battle at Niagara Falls, but he was in service at Fort Erie, a few weeks later. In 1821, he was appointed general-in-chief of the armies of the United States, and held that office until his death, which occurred at his head-quarters, in Washington city, on the 24th of February, 1828, at the age of fifty-three.

BURKE, Ædanus, was a native of Galway, Ireland, where he was born about the year 1743. At the commencement of the American Revolution, he came to fight for liberty. He made his abode in Charleston, and was active in the early military events in that vicinity. He was a lawyer by profession, and considering his services more valuable in civil than in military affairs, the provincial legislature appointed him a judge of the Supreme Court of the newly-organized State, in 1778. When Charleston fell, and the South lay prostrate at the feet of British power, in 1780, B. took a commission in the army. He resumed the judicial office when the Republicans regained the State, early in 1782. He served as the first United States Senator from South Carolina, and while in Congress was the favorite friend of Aaron Burr. He afterward became Chancellor of the State of North Carolina. Wit, humor, and conviviality, were his distinguishing social characteristics. The former were ever visible whether he was on the bench or in the drawing-room; while the latter finally became such a habit that he was its slave. He died at Charleston, on the 30th of March, 1802, at the age of fifty-nine.

BURNET, Robert. Of all the officers who participated in the parting scene between the principal officers of the army and Washington, at Fraunce's Tavern, after the evacuation of New York by the British, Major Robert Burnet, of Little Britain, Orange county, was, for many years, the sole survivor. His father was a Scotchman, and his mother was a native of Ireland. She was one of those who accompanied the first members of the Clinton family, who settled in the vicinity of Newburgh. B. was born in Little Britain, on the 22d of February, 1762, and was engaged in agricultural pursuits until about 1779, when he entered the revolutionary army, in the artillery branch of the service, under Captain Ebenezer Stevens. He was a lieutenant in Stevens' company, and commanded Redoubt No. 3, at West Point, at the time of Arnold's defection, in September, 1780. He was afterward promoted to the rank of major, and was one of the delegates who attended a meeting of the officers, convened by Washington, on account of the seditious tendency of the anonymous Address put forth by Major Armstrong, at Newburgh, in the spring of 1783. He continued in the army, under the immediate command of the chief, until it was disbanded. In the march into the city of New York, on the day when the British evacuated it, B. commanded the rear-guard. He was the last to grasp the hand of Washington at that solemn parting at Fraunce's; and then he returned to his rural pursuits in the town of his nativity. There he lived in the enjoyment of great domestic happiness, until his death. He lived to see, what few men

in modern times have beheld—the living representatives of seven generations of his kindred. These were his great-grandfather of the ancestral part of the connection, and the great-grandchildren of his own posterity. B. died at his residence, in Little Britain, on the 1st of December, 1854, when almost ninety-three years of age. His funeral was attended by his neighbor, Uzal Knapp, who was almost three years his senior. Mr. Knapp, the last survivor of *Washington's Life-Guard*, died about a year afterward.

CAREY, Mathew. Few men have exerted so wide and beneficial an influence, in the domain of letters, in the United States, as Mathew Carey, an eminent author and publisher, who was born in the city of Dublin, on the 28th of January, 1760. His first effort in authorship was made when he was seventeen years of age. His topic was *Duelling*. Two years afterward (1779) he prepared and advertised a political pamphlet, which alarmed the Irish Parliament, and caused that body to suppress its publication. A prosecution was determined upon, and his friends judiciously advised him to leave the country. He escaped to Paris, where he became acquainted with Dr. Franklin, and learned much concerning America. The storm subsided; and, in the course of the following year, young Carey, then only twenty years of age, returned to Dublin, and became editor of the *Freeman's Journal*. In 1783, his father furnished him with means to establish a paper called the *Volunteer's Journal*. It exerted a wide and powerful political influence; and in consequence of the publication in its columns, in 1784, of a severe attack upon the British government, and an alleged libel upon the Prime Minister, C. was arrested, taken to the bar of the House of Commons, and consigned to Newgate prison. The Lord Mayor of London released him in the course of a few weeks; and in the autumn of 1784, he sailed for America. He landed at Philadelphia with a few guineas in his pocket, chose that city for a residence, and, in January, 1785, commenced the publication of the *Pennsylvania Herald*. That paper soon became famous for its legislative reports, prepared by C. himself. Bold, and faithful to his convictions, in editorship, he often offended his opponents. Among these was Colonel Oswald, of the artillery corps of the Revolution, who was then editing a newspaper. Their quarrel resulted in a duel, in which C. was severely wounded. In 1786, he commenced the publication of the *Columbian Magazine*. The following year he issued another publication, called the *American Museum*, which he continued for six years, when the prevalence of yellow fever, in Philadelphia, suspended it. During that season of pestilence the courage and benevolence of C., as an associate with Stephen Girard and others as health commissioners, was nobly exhibited. Their labors for the sick and orphans were incessant and beneficent. His experience led him to the publication of an able essay on the origin, character, and treatment of yellow fever, in 1794. At about the same time he was active in founding the *Hibernian Society*, for the relief of emigrants from Ireland. In 1796, he was zealously engaged, with others, in establishing a Sunday School Society in Philadelphia; and the same year he entered into a controversy with the celebrated William Cobbett, with so much logic and energy, that he silenced his antagonist. The most important effort, made by C. in publishing, was in 1802, when he put forth a handsome edition of the standard English Quarto Bible. His chief travelling agent for its sale was Reverend Mason L. Weems, who disposed of several thousand copies. It was profitable and creditable to C. During the whole exciting period just previous to the breaking out of the war with Great Britain, in 1812, his pen was continually busy on topics of public interest; and in the midst of the violent party excitement, in 1814, he published his famous *Olive Branch*. It was intended to soften the asperities of party spirit, create a thoroughly American sentiment among all classes, and produce peace and conciliation. It was eminently successful; and for this effort, C. deserved a civic crown. Ten thousand copies were sold, and its salutary influence is incalculable. In 1818, C. commenced the preparation of his most important historical work, the *Vindiciæ Hiberniæ*. He died on the 17th of September, 1839, at the ripe old age of almost eighty years.

CARY, Lott, was born a slave, near Charles City Courthouse, in Virginia, on the plantation of William Christian. In 1804, he was hired out as a common laborer in the city of Richmond, where he became intemperate, and was very profane. Three years afterward deep religious impressions changed his habits and thoughts, and he became a member of the Baptist Church. He could not read, but procuring a New Testament, and applying himself faithfully, he acquired a knowledge of the alphabet and words, and finally succeeded in learning to both read and write. He soon became an itinerant preacher on the plantations in the vicinity of Richmond, and labored with the most earnest zeal for the spiritual good of his race. In 1821, the American Colonization Society sent its first band of emigrants to Africa, and C. volunteered to leave a salary of several hundred dollars a year, to accompany those people to a field where he felt that he might be of vast service to his benighted nation. He participated in all the hardships and dangers of that little colony, yet he persevered, and became one of the founders of the now flourishing republic of Liberia, on the western coast of Africa. He became health-inspector and physician of the colony, having received some instruction in the healing art, from Dr. Ayres; and, in 1824, he had more than a hundred patients. As early as 1815, he assisted in forming an African Missionary Society, in Richmond; and in Africa he performed its work as well as he could. Through his agency, a school was established about seventy miles from Monrovia. In September, 1826, he was appointed vice-agent of the colony; and when, in 1828, Mr. Ashmun, the agent of the Society, was compelled to withdraw on account of ill-health, he cheerfully and confidently left the entire control of affairs in C.'s hands. He managed well, as chief of a colony of twelve hundred freemen, for about six months, when, on account of a difficulty with the natives, he prepared for a military expedition against them. While making cartridges, an explosion took place, which killed the venerated C. and seven others, on the 8th of November, 1828.

CHITTENDEN, Thomas, was born at East Guilford, Connecticut, on the 6th of January, 1729; received only the meagre rudiments of an English education, then furnished by the common schools, and married at the early age of twenty years. Then he made his residence at Salisbury; and his natural abilities, combined with a pleasing person and address, soon made him popular. For several years he represented his district in the legislature of Connecticut. Agriculture was his delight. His family had a rapid growth, and he emigrated to the borders of the Onion river, in 1774, on what was known as the *New Hampshire Grants*, on the east side of Lake Champlain, for the purpose of laying the foundations of a fortune for his children. There, separated by an almost trackless wilderness from his early friends, he opened many fertile acres to the blessed sunlight, and invited settlers to come and form the nucleus of a State. Soon, political agitations disturbed his repose; and, in 1775, he was appointed one of a committee to visit the Continental Congress at Philadelphia, and ask political advice. He was one of the committee who drafted a declaration of the independence of Vermont, adopted on the 15th of January, 1777. He also assisted in the formation of a State constitution, in July, 1777, and was elected the first governor under it. That office he held until his death, with the exception of one year. He died on the 25th of August, 1797, in the sixty-ninth year of his age.

CHURCH, Benjamin, next to Miles Standish, the warrior-pilgrim of the *May Flower*, was the most distinguished military hero in early New England history. He was born at Plymouth, Massachusetts, in 1639, and was instructed in the trade of a carpenter, by his father. He went to Duxbury to reside, and was pursuing his vocation there when King Philip's war broke out. That great chief of the Wampanoags had long kept inviolate the treaty made with the white people by his father, Massasoit; but when provocations multiplied his patriotism was aroused, and he willingly listened to the hot young warriors aronnd him, who counselled a war of extermination against the English. For almost a year the dreadful war went on. Nearly all of the New England tribes joined Philip in his enterprise. The white people banded, and struck the savages with vigorous blows in all directions. Among their leaders, C. was the bravest of the brave; and in the spring of 1676 he completely broke the power of the New England tribes, King Philip being shot by a faithless Indian. Almost three thousand Indians had been slain or had bowed in submission. C. lived many years after the war, at different places in the vicinity of Narraganset Bay, in Rhode Island. His last place of residence was Little Compton, where, on the 17th of January, 1718, he was thrown from a horse. He was very corpulent, and the shock of his fall ruptured a blood vessel, which caused his death in the course of a few hours, at the age of seventy-nine.

CLAIBORNE, William Charles Cole, was born in Virginia, in 1775. He was a student in William and Mary College, for a while, but completed his education at an academy in Richmond. With a determination to help himself, he went to New York, and sought employment under Mr. Beckley (with whom he was acquainted), then clerk to the Federal House of Representatives. He succeeded, and at the age of sixteen the accomplished and resolute boy ate bread earned by his own industry. He left New York, studied Blackstone, in Richmond, for three months, was admitted to the bar, and established himself in Sullivan county, Tennessee. When Tennessee prepared to enter the Union as a sovereign State, C. was chosen a member of a convention to form a constitution. In that convention he began his political career; and he was regarded by all as a prodigy, for he was then only about twenty-one years of age. The people, by an immense majority, elected him their representative in Congress. He was again triumphantly re-elected. In that Congress he greatly distinguished himself by his learning, logic, and eloquence. Soon after President Jefferson's accession he appointed C. governor of the Mississippi Territory, on the request of the people there; and on the 23d of November, 1801, he was enthusiastically received at Natchez, the seat of government. He found society heaving with the turbulence of faction; he poured the oil of conciliation upon the billows, and they soon became calm. His duties as governor of Louisiana, to which office he was appointed early in 1804, were more arduous and perplexing, yet he performed them with signal ability and success. His justice and urbanity endeared him to all classes; and when, in 1812, Louisiana became an independent State, the people chose him for their governor, by an almost unanimous vote. He was in the executive chair during the memorable invasion of the British, and their repulse at New Orleans by General Jackson, early in 1815. On that occasion C. wisely and generously surrendered to Jackson all power and command, and, under that general's orders, the magistrate led a large body of the militia of his State. His long career as governor of Louisiana terminated in 1817, when he was chosen to represent that State in the Federal Senate. He died November 23, 1817, in the forty-second year of his age.

CLARKE, George Rogers, was born in Albemarle county, Virginia, on the 19th of November, 1752, and first appeared in history as an adventurer beyond the Alleghanies, in 1772. He had been engaged in the business of land-surveyor for some time, and that year he went down the Ohio, in a canoe, as far as the mouth of the Great Kanawha, in company with Rev. David Jones, then on his way to preach the gospel to the western tribes. He was captain of a company in Dunmore's army, which marched against the Indians on the Ohio and its tributaries, in 1774. Ever since his trip in 1772, he ardently desired an opportunity to explore those deep wildernesses in the great valleys; and in 1775, he accompanied some armed settlers to Kentucky, as their commander. During that and the following year, he traversed a great extent of country south of the Ohio, studied the character of the Indians, and made himself master of many secrets which aided in his future success. When Arnold invaded Virginia, in 1781, C. joined the forces under the Baron Steuben, and performed signal service until the traitor had departed. In the autumn of 1782, he penetrated the Indian country between the Ohio and the Lakes, with a thousand men, and chastised the tribes severely for their marauding excursions into Kentucky, and awed them into comparatively peaceful relations. For these deeds, John Randolph afterward called C. the "American Hannibal, who, by the reduction of those military posts in the wilderness, obtained the lakes for the northern boundary of our Union, at the peace in 1783." He died near Louisville, Kentucky, in February, 1818, at the age of sixty-six.

COLBURN, Zerah, was born at Cabot, Vermont, on the 1st of September, 1804, and until he was almost six years of age, he appeared the dullest of his father's children. At about that time he exhibited extraordinary powers of calculation, by a mental process wholly his own, and which he could not explain. His father was led to expect great achievements by his gifted boy, and at the same time, with the avowed purpose of procuring money to have him educated, he took him to different places in New England, to be examined, hoping to meet with some generous aid. It was offered by the president of Dartmouth College, who proposed to educate Zerah at his own expense. Hoping for a more favorable offer, his father took him to Boston, where his wonderful powers created a great sensation. They were indeed wonderful. The most difficult questions on the various arithmetical rules, were solved almost instantly, by a mental process, for the manual labor of making figures was altogether too tardy for his calculations. Several gentlemen in Boston offered to educate the lad, but his father would not consent. He travelled with him through many of the Middle and Southern States, exhibiting him for money; and, in 1812, he went with him to England, for the same purpose. After travelling through much of Great Britain and Ireland, they went to France, and young C. became a student in the *Lycée Napoleon*, for a short time. In 1816, they returned to England. There the lad found a generous patron in the Earl of Bristol, who placed him in Westminster school, and kept him there about three years. Young C. was making fine progress, when his father refused to comply with some wishes of the earl, and the patronage of that peer was lost. Zerah finally opened a school on his own account, and he earned some money by making astronomical calculations for Dr. Young, then Secretary of the Board of Longitude. The elder Colburn died in 1824, and the Earl of Bristol and others, assisted Zerah with means to return to his native country. He was then twenty years of age. He became assistant teacher in an academy connected with Hamilton College, in the State of New York. He soon afterward went to Burlington, Vermont, where he gained a precarious living by teaching the French language. Then he united himself with the Methodist Society, and soon afterward become an itinerant preacher. He was an indifferent speaker. Finally, in 1835, he settled at Nor-

wich, Connecticut, and became Professor of Latin, Greek, French, and Spanish languages, in the "Norwich University." Two years previously, he had written and published a memoir of himself, which contains a great deal of curious narrative. He died at Norwich, on the 2d of March, 1840, in the thirty-fifth year of his age.

COLDEN, Cadwallader, was born in Dunse, Scotland, on the 17th of February, 1688. He completed his collegiate studies at the university of Edinburgh, in 1705, and after devoting three years to the study of mathematics and medical science, he came to America, where he remained five years, as a practicing physician. He went to Great Britain in 1715, and formed the acquaintance of Halley and other leading men of science; and the following year he married a Scotch girl, returned to America, and settled in the city of New York. C. soon abandoned his profession, for public employment. He was made surveyor-general of the province, a master in chancery, and finally became one of the governor's council. About the year 1750, he obtained a patent for a large tract of unsettled land near Newburgh, in Orange county. There, after the year 1755, he resided most of the time. Many learned essays from his pen enriched the medical and scientific publications of his day; and his *History of the Five Nations of Indians*, is a noble monument in testimony of his careful and judicious researches in that special field of inquiry. Botany was his favorite study, and he was a constant and valued correspondent of Linnæus, the great master of the science, for a series of years. His voluminous papers are now among the choice treasures of the New York Historical Society. In 1760, he was appointed lieutenant-governor of the province of New York, and became the acting magistrate, at eighty years of age. He managed public affairs with great prudence during all the trying scenes of the Stamp-Act excitement; and the *Sons of Liberty* respected him, while they defied his delegated power. He was released from office, by Governor Tryon, in 1775, and retired to his country seat, at Flushing, Long Island, where he died on the 28th of September, 1776, in the eighty-eighth year of his age.

COLLES, Christopher, was born in Ireland about the year 1757. Under the instructions of Richard Pococke, the celebrated Oriental traveller, he acquired much scientific knowledge and considerable expertness in the use of different languages. His patron died in 1765, and C. came to America soon afterward. He first appeared in public here as a lecturer on canal navigation, at about the year 1772; and he is unquestionably the first man who suggested the importance of a navigable water-communication between the Hudson river and the Lakes. He presented a memorial on the subject to the New York State legislature, in the autumn of 1784, and in April following, a favorable report was made. C. made a survey of the Mohawk, and the country to Wood creek, by which a water-communication with Oneida and Ontario lakes might be effected. The results of that tour were published in a pamphlet, in 1785. More than ten years before, C. had matured a plan for supplying the city of New York with wholesome water, and steps were taken for the purpose, when the Revolution interfered. Year after year he was engaged in his favorite projects. In 1797, his name appeared among applicants for a contract to supply the city of New York with water; and it was unquestionably his fertile mind that conceived the idea, then first put forth, of obtaining water from Westchester county. The *Bronx*, instead of the *Croton*, was the proposed fountain of supply. In 1789, C. published a series of sectional Road Maps, for the use of travellers in New York, New Jersey, Pennsylvania, Maryland, and Virginia; and, in 1794, he issued the first number of "The Geographical Ledger." Dr. Mitchell was his warm friend; Jarvis thought it an honor to paint his portrait; and Dr. Hosack commemorated him in his life of Clinton. He died in 1821.

COXE, Tench, was a grandson of Dr. Daniel C., physician to the queen of Charles II., and of Queen Anne, of England, who became one of the principal proprietors of the soil of West Jersey. His son, William C., married the daughter of Tench Francis, attorney-general of the province of Pennsylvania, and these were the parents of Tench C., who was born in Philadelphia, on the 22d of May, 1755. His chief distinction is that of a lucid and powerful advocate of the cultivation of cotton in the United States, and of other industrial pursuits. From 1787, until the death of C., on the 17th of July, 1824, there was never any important movement in favor of the introduction and promotion of manufactures, in which his name did not appear prominent.

CRAIK, James. Of the family physician of the great Washington, and the companion-in-arms of that beloved leader in his earlier military career, there are but few records left, and these cluster like parasites around the biography of the Father of his country. Dr. Craik was a native of Scotland, and settled in Virginia, while yet quite a youth. He accompanied lieutenant-colonel Washington in his expedition against the French and Indians in Western Pennsylvania, in 1754, and was a surgeon in one of the provincial corps, under Braddock, the following year. He dressed that officer's fatal wounds on the night of the battle of the Monongahela, and stood by Colonel Washington when he read the impressive funeral service of the Church of England, over the body of the fallen commander. Fifteen years afterward, while C. was exploring some wild lands near the mouth of the Great Kenhawa, he met a venerable chief, who said, that in the battle when Braddock was killed, he fired his rifle at Washington fifteen times, but could not hit him ! His young warriors did the same, with a like result, and all believed that the Great Spirit specially protected the young hero. C. served in his professional capacity during portions of the War for Independence; and at the siege of Yorktown, he was director-general of the hospital there. He accompanied Washington to the death-bed side of Mr. Custis—one of the children of Mrs. Washington; and at the close of the war, he settled near Mount Vernon, by invitation of the chief, and became his family physician. When the good patriot was suddenly prostrated by the disease which terminated his life, a servant was dispatched, in great haste, for C. With all the attention of a dear friend, and the skill of a good physician, he watched his noble patient until the last. He lived to take an interest in another war for independence, but died in the midst of its tumult, on the 6th day of February, 1814, in the eighty-fourth year of his age.

DANA, Francis, was born at Charlestown, near Boston, in August, 1742. He was educated at Harvard University, and chose the law as his profession. In the midst of the confusion and distress incident to the closing of the port of Boston, by parliamentary decree, in 1774, D. went to England, and passed a year with his brother, a clergyman, at Wroxeter. He returned to America at the close of 1775, took an active part, as a patriot, in the exciting political proceedings of the time, and in the autumn of 1776, was elected a delegate to the Continental Congress. In that important station he remained until November, 1779, when he accompanied John Adams to Paris, as Secretary of Legation. Toward the close of 1780, Congress appointed D. minister plenipotentiary at the court of Russia. The Empress Catherine would not openly receive him, for fear of offending England, but he was allowed to remain in St. Petersburg until the close of the war, when he returned home, and was immediately chosen a delegate to the Congress of 1784. D.

was an efficient advocate of the Federal Constitution, in the Massachusetts convention, and exerted great influence in the political affairs of his State. President Adams appreciated his worth, and offered him the office of envoy extraordinary to France, with Messrs. Marshall and Pinckney, in 1797. He declined the honor. D. had then held the important office of chief justice of Massachusetts, for five years, to which he had been appointed by President Washington. He retained his seat on the bench until 1806, when he retired to private life. D. died at his residence in Cambridge, near Boston, on the 25th of April, 1811, at the age of sixty-eight.

DAY, Stephen, the first printer who practiced his art within the domain of the United States, was a native of London. The Rev. Jesse Glover, one of the earliest patrons of Harvard College, presented that institution with a font of type, and others contributed money to buy a press. In 1638, Mr. Glover, then in London, engaged Day to accompany him to America, to take charge of the printing-house at Cambridge. Glover died on the voyage, but D. arrived in safety, with his patron's widow and children, and commenced work in January, 1639. His first production was *The Freeman's Oath;* and soon afterward he printed an *Almanac* made by a mariner named Pierce, in which the year begins with March. The first *book*—the first one printed in America—was the *Psalms in Meter,* containing three hundred pages, and was known as *The Bay Psalm Book.* He printed several Almanacs, and also some astronomical calculations by Urian Oakes, then a youth, and afterward president of Harvard College. He expired at Cambridge, on the 22d of December, 1668, at the age of about fifty-eight years.

DICKENSON, John. The "Letters of a Farmer of Pennsylvania to the Inhabitants of the British Colonies," published in the *Pennsylvania Chronicle,* during the summer and autumn of 1767, had a powerful influence on the American mind, in preparing it for the great struggle for freedom, even then impending. The author was John Dickenson, a native of Maryland, where he was born, on the 13th of November, 1732. He first appeared in public life as a member of the Pennsylvania Assembly, in 1764, where the readiness of his pen attracted general attention. He was also a member of the Stamp Act Congress, in 1765. D. was a member of the first Continental Congress, in 1774, and his pen was instrumental in the preparation of two of the State papers put forth by that body. He wrote the Declaration of the Congress of 1775, setting forth the causes and the necessity for war; yet he steadily opposed the idea of political independence, for he hoped for a reconciliation. For that reason, he was intentionally absent from Congress on the 4th of July, 1776. He was again elected to Congress, in 1779, and there, as before, his pen was employed in the preparation of important State papers. In 1780, he took his seat, as a member, in the Delaware Assembly; and, in 1782, he was elected president or governor of Pennsylvania. He held that office until October, 1785. He was one of the most accomplished and efficient members of the convention that framed the Federal Constitution. In 1792, he assisted in forming a Constitution for Delaware. He died on the 14th of February, 1808, at the age of seventy-five. Dickenson College, at Carlisle, Pennsylvania, is a noble monument to perpetuate his memory.

DOWNING, Andrew Jackson. No American ever contributed so much toward the creation and cultivation of a taste for beautiful rural architecture, landscape gardening, and the arrangement of fruit and ornamental trees, as A. J. Downing, who was drowned on the occasion of the destruction of the steamer *Henry Clay,* near Yonkers, in July, 1852, at the age of thirty-seven. D. was born at Newburgh, Orange County, New York, in 1815. From early boyhood he delighted to commune with nature, and loved flowers with a passionate delight. At the age of twenty-six he published the results of his practice, observations and reflections, in a valuable book on *Landscape Gardening.* D. next turned his attention to the kindred art of Architecture, and soon produced a volume on *Cottage Residences.* Then appeared his *Architecture of Country Houses,* in which he gave designs for Cottages, Farm Houses and Villas, exterior and interior, with valuable suggestions respecting furniture, ventilation, etc. In 1845 his large work on *Fruit and Fruit Trees of America,* was published in New York and London, which has passed through many editions. His mind and hands were ever actively employed in his favorite pursuit; and through the *Horticulturist,* a monthly repository of practical knowledge on the subject of cultivation of every kind, which he edited, D. communicated the results of his observations and personal experiences. In addition to his large works, he published *Rules of American Pomonology,* and edited the productions of others.

DRAYTON, William Henry, was born in September, 1742. For about eleven years he was a student at Windsor and Oxford, in England; and on his return to South Carolina, he prepared for the profession of the law. In September, 1774, D. published a pamphlet, addressed to the Continental Congress, in which the grievances of the Americans were clearly stated, and an able Bill of Rights presented. He yet held the position of one of his majesty's justices, to which he had been appointed in 1771, and was the only native-born citizen who had ever been honored with that office. He retained his position until the spring of 1775, when the royal judges made their last circuit. During the following summer he labored manfully in the cause of freedom, as President of the Provincial Congress of South Carolina; and in the autumn, when the British sloops of war, *Tamar* and *Cherokee,* menaced Charleston with bombardment, because of the rebellious movements of its citizens, he was appointed, by the committee of safety, to the command of the armed ship, *Prosper,* employed to oppose them. Commodore D. returned their fire promptly several times, and thus actual hostilities at the South commenced. In March, 1776, D. was chosen chief justice of the then revolted colony of South Carolina, by the unanimous voice of his Whig countrymen; and his admirable charge to the grand jury, delivered a month afterward, was hailed throughout the land as one of the noblest expressions of patriotic public sentiment yet uttered. It placed the author in the same honorable position as John Hancock and Samuel Adams, of Massachusetts, who were denounced as arch-traitors. From that time, until the close of his career, he was regarded as one of the chief leaders of the rebellion in the South, and yet he found time to chronicle, in minute detail, the preliminary and current events of the great struggle. He became a member of the Continental Congress, and died suddenly while in the discharge of his legislative duties, in Philadelphia, on the 3d of September, 1779, at the age of thirty-seven. "*A Memoir of the American Revolution, from its commencement to the year* 1776," prepared by Judge D., was revised and published by his son, Governor John D., in 1821.

DUNLAP, William, was born at Perth Amboy, New Jersey, on the 19th of February, 1766, and at the house of a kind neighbor, his taste for pictures and reading was early developed by familiarity there with paintings and books. The storm of the Revolution produced great confusion in New Jersey, and young D.'s education was almost utterly neglected, until his father removed to the city of New York, in 1777, which was then in possession of the British. There, while at play, William lost an eye, by accident. He had become very expert in copying prints, in India ink, and this

accident perilled all his future career as a painter, of which he now dreamed continually. The difficulty was soon overcome by habit, and he used his pencil almost incessantly, with occasionally a word of instruction from an artist. He commenced portrait-painting at the age of seventeen years, and at Rocky Hill, in New Jersey, he was allowed to paint the portrait of Washington. In 1784, young D. went to England, and became a pupil of the great Benjamin West. His progress was slow, for he spent much of his time in the enjoyments of the amusements of London. At the age of fifty-one years, he first became permanently a painter, and his true artist-life began. He went from place to place in the United States and Canada, painting portraits with considerable success. He also turned his attention to the higher walks of art, and produced, in succession, three large pictures—*Christ Rejected, Death on the Pale Horse,* and *Calvary.* The exhibition of these in various parts of the Union, contributed materially to the support of his family, for many years. He painted other and smaller pieces, some of which, and especially *The Historic Muse,* were productions of great excellence. In 1830, D. commenced lecturing on Fine Art topics, and attracted much attention; and, in 1832, he published a *History of the American Theatre.* It was very favorably received, and was followed by his history of the *Arts of Design in the United States.* In the meanwhile (February, 1833), he received a complimentary benefit at the Park theatre, New York, which gave him over two thousand five hundred dollars. In 1839, he published the first volume of a *History of the State of New York.* The second volume was unfinished at the time of his death. He died in New York city, on the 28th of September, 1839, in the seventy-fourth year of his age. D. was the author of several dramas; also a biography of Charles Brockden Brown.

ELLSWORTH, Oliver, was born at Windsor, the point of earliest settlement in Connecticut, on the 29th of April, 1745. His father was a respectable farmer, and with the strong common sense of his class, he prepared Oliver for the stern duties of life, by habits of labor, application, and frugality. He entered Yale College at the age of seventeen, but greater advantages appearing at Princeton, he completed his studies there, where he was graduated in 1766. He labored with unceasing energy upon a rough farm. His evenings were devoted to the study of the law, and at the age of about twenty-five, he commenced its practice in the vicinity of Hartford. Increase of legal business induced E. to make Hartford his residence, and there he received the appointment of State's Attorney. As the quarrel with Great Britain progressed, he was always found on the side of the people. He even went to the field with the militia of his State, when the war broke out. In 1777, he was chosen a delegate to the Continental Congress, and in 1780, took a seat in the council of his native State. He continued a member of that body until 1784, when he was appointed a judge of the superior court of Connecticut. E. was a warm friend of the Federal Constitution, did much toward effecting its ratification, in his State, and in 1789, was elected the first representative of Connecticut in the Senate of the United States. In the spring of 1796, he was appointed chief justice of the United States. He bore the ermine with majesty, and cast it off in unsullied purity when, toward the close of 1799, President Adams appointed him, with Davie and Murray, an ambassador to the French court, at the head of which was the youthful Bonaparte. He returned home early in 1801, and was immediately elected to the council of his State. His health was now becoming impaired; and when, in May, 1807, he was appointed chief justice of Connecticut, he declined the office. He died November 26, 1807, at the age of sixty-two.

FITCH, John, was born between Hartford and Windsor, in Connecticut, on the 21st of January, 1743. At eight years of age, he was taken from school, and put to labor on a farm; after which he had but one month in each year to devote to study under instruction. But most of the leisure moments of childhood were employed with his books; and at eleven years of age, he planted and raised some potatoes, for the express purpose of purchasing a complete Geography. His health was naturally feeble, and he appears to have been overworked on the farm. He ran away from home, and was afterward apprenticed to a clock-maker. He learned the business imperfectly, and abandoned it, at his majority, for that of a brass-founder. He was a silversmith in Trenton, New Jersey, when the British army entered it, and destroyed his shop and contents, in the winter of 1776, because he was engaged in repairing American arms. He joined the army, and was with Washington at Valley Forge. There he heard some officers speak of the fertility of Kentucky. He procured the appointment of deputy surveyor, and, in the spring of 1780, set out on foot, for that untraversed wilderness beyond the Alleghanies. He returned to Philadelphia the following year, the owner of sixteen hundred acres of fine land in the Ohio Valley, and filled with dreams of future opulence. He now conceived the idea of "gaining a force by steam;" and in August, 1785, he presented the subject to the Continental Congress, and asked for aid to try experiments in applying the power to the propulsion of vessels, by means of wheels and paddles. At about this time, Mr. Rumsey, of Virginia, had conceived a similar idea, and F., disappointed and exasperated by what he deemed the stupidity of Congress, went from state to state, in search of aid, but without success. He engaged in a bitter controversy with Rumsey, in relation to priority of invention; and in the meanwhile, new claimants appeared. Yet all seemed to have distinct plans, with identical aim—the moving of a boat by means of steam-power. F. and Rumsey procured protective statutes from different state legislatures. The former organized a stock company, to carry out his designs, in 1786, but little was effected by it. The state of Pennsylvania refused to lend him one hundred and fifty pounds, to procure an engine from England. With another mechanic, he succeeded in constructing an engine and boat; and on the 1st of May, 1789, the *first steamboat* was seen moving upon the waters of the Delaware. The boat went at the rate of eight miles an hour, and yet there was not confidence enough in the project to sustain the persevering inventor. To him success was as "clear as any problem in Euclid;" and in a letter to Franklin, he expressed his full belief that "*steamboats would answer for sea voyages, as well as inland navigation.*" Despairing of gaining funds to perfect his invention, in America, F. went to France and England, in 1792; but, disappointed and almost penniless, he returned home, and retired to Kentucky. He foretold the time of his death by a mathematical calculation, and on the 2d of July, 1798, he died at Bardstown, Kentucky, and was buried there.

GADSDEN, Christopher, was a native of Charleston, South Carolina, where he was born in 1724. He was appointed a delegate to the Congress which assembled at New York in 1765, in consequence of the passage of the Stamp Act; and from that period, through all the storms of the Revolution, until the fall of Charleston, in 1780, he was regarded as the most reliable of the patriot leaders, both civil and military. He was chosen a delegate to the first Continental Congress, in 1774; and in that body, urged an immediate attack upon General Gage at Boston, before he should be reinforced by fresh troops from Great Britain. He was considered rash, but the measure was only delayed a few months. In 1775, G. was elected senior colonel of three regiments raised at Charleston, and was subsequently made a brigadier. He was active at the time of the attack on Charleston, in 1776; and two years afterward he gave his efficient aid in forming a republican constitution for his

native State. He resigned his military commission in 1779, and was lieutenant-governor of the State, when Charleston was captured by Sir Henry Clinton, in May, 1780. He was elected governor of his State, in 1782, but declined the honor. He remained in private life until his death, on the 28th of August, 1805, at the age of eighty-one.

GALLOWAY, Joseph, was born in Maryland, in 1730, and early in life he went to Philadelphia to practice law, in which profession he soon took a high rank. He was a member of the Assembly of Pennsylvania, in 1764, and his sympathies, as manifested by his words and actions, were always on the side of the people. So well convinced were the people of his staunch republicanism, that he was elected a member of the first Continental Congress in 1774, and was a very active participant in the debates in that body. He submitted a plan of union between Great Britain and the colonies, by which the latter might be comparatively independent, with a president at their head, appointed by the king. His plan was not adopted; and when the Congress agreed upon a non-importation, non-consumption, and non-exportation scheme, called the *American Association*, G. signed it. He was never in favor of a political separation from Great Britain, yet he was always in favor of the most stringent measures for compelling the government to redress the grievances of the colonists. In 1775, he began to show signs of wavering, by earnestly asking to be excused from serving as a delegate in the Continental Congress; and in 1776, when the question of independence began to be agitated, he abandoned the Whigs, and became one of the most violent and proscriptive Loyalists. Afraid to remain in Philadelphia, he joined the royal army in New York, where he remained until early in the summer of 1788, when he went to England, accompanied by his only daughter. In 1779, he was summoned before parliament to testify concerning the state of affairs in America. He was severe upon General Howe and other British officers, in relation to their stupid management. G. never returned to America. He died in England, in September, 1803, at the age of seventy-three.

GODFREY, Thomas, was born about a mile from Germantown, in Pennsylvania, in the year 1704. His early education was limited; and at a proper age he was apprenticed to a glazier, in Philadelphia. He entered into the business on his own account in 1725, and was employed in glazing Christ Church and the State House, both of which are yet standing in the old part of Philadelphia. From his early boyhood G. exhibited great taste for figures; and, like Rittenhouse, he often exhibited his diagrams in his place of labor. In the summer of 1729, he was employed by James Logan to glaze some windows in his library, and there he first saw Newton's Principia. He borrowed the work; and early in 1730, he communicated his invention of the *Quadrant* (an astronomical and nautical instrument of great value) to that gentleman. That the sole honor was justly due to G., there can be no doubt, for the fact appears to be well authenticated, that the first instrument made of brass, from G.'s wooden model, was taken by the inventor's brother, captain of a vessel in the West India trade, to the island of Jamaica, and there exhibited to some English naval officers. Among these was a nephew of John Hadley. He purchased the instrument of Captain G. for a large sum of money, and took it to his uncle, in London, who was a mathematical instrument maker. That gentleman made another instrument like it, except a few alterations, and presented it to the Royal Society, with an explanatory paper, as his invention. That presentation occurred on the 13th of May, 1731, just about the time that Sir Hans Sloane called the attention of the Society to G.'s invention. The American inventor, like Columbus, lost the honor of having his name identified with the discovery, and the instrument is known as *Hadley's Quadrant*. G. died in Philadelphia, in December, 1749, at the age of forty-five.

GOODRICH, Samuel Griswold. "I stand before the public," wrote Mr. Goodrich in his *Recollections of a Lifetime*, "as the author and editor of about 170 volumes, 116 bearing the name of Peter Parley. Of all these, over seven million of volumes have been sold." Like Jacob Abbott, "Peter Parley" (the assumed name of G.) labored chiefly for the amusement and instruction of the young. He was born in Ridgefield, Conn., August 19, 1793. Having received a good common-school education, he began the publishing business at Hartford, on attaining his majority. In 1824 he visited Europe, and, on his return, established himself as a publisher in Boston. From 1828 to 1842 he edited and published *The Token*, an illustrated annual, to which he contributed several tales and poems, and in which first appeared the finest of Hawthorne's *Twice-Told Tales*, without attracting much attention. The entire annual, literary and artistic, was composed of the work of Americans. It was soon after G. removed to Boston that he began his popular series of "Peter Parley's" juvenile books. The 116 volumes comprised geographies, histories, travels, stories, and various illustrations of the arts and sciences. In 1841 he established *Merry's Museum and Parley's Magazine*, a juvenile periodical, which he edited until 1854. G. was appointed United States consul at Paris in 1851. While there he published a work in French on the geography and history of the United States of America. On his return to his native country he published a kind of autobiography entitled *Recollections of a Lifetime; or Men and Things I have Seen: in a series of Familiar Letters to a Friend, historical, biographical, anecdotal and descriptive.* In that work he gives the names of the books of which he was the author, the recital of which fills six closely printed pages. His latest production was an *Illustrated Natural History of the Animal Kingdom*, completed in 1859. G. died suddenly in the city of New York, May 9, 1860, at the age of sixty-six.

GORDON, William. The most faithful and impartial history of the American Revolution, by a cotemporary author, was written by William Gordon, an English independent clergyman, who was in America during the struggle of the colonists for civil and political freedom. He was born in Hertfordshire, England, about the year 1740, and at an early age was pastor of an Independent congregation at Ipswich, where his faithfulness in reproving Sabbath-breakers, made him many enemies, and gave him an uneasy place. He became successor to Dr. Jennings, as pastor of a church at Wapping, and was so much beloved, that he might have passed his life pleasantly there. But he had long yearned to make America his home, and, in 1770, he sailed for Boston. For about a year he preached in one of the churches at Roxbury; and in July, 1772, he was chosen its pastor. He was a republican, and soon became identified with the popular party in Massachusetts, in opposition to the crown. When the Provincial Congress of that colony was formed, in 1774, G. was chosen its chaplain, and he continued a faithful adherent to the patriot cause. After the promulgation of the Declaration of Independence, in 1776, he conceived the idea of writing a history of the progressing struggle, and he kept full notes during the entire war. When it was ended, he was allowed free access to public records, and to the papers of Washington, Greene, Gates, and other distinguished officers. In 1786, he returned to his native country, completed his history, and published it in London, in 1788. It was soon afterward re-published in New York, in three volumes. The work is now very scarce. The author received about fifteen hundred dollars for his service in its preparation. In 1793, he was settled as a pastor at St. Neots, in Huntingdonshire, but his unpopularity as a preacher, on account of evidently failing

intellect, caused his friends to persuade him to resign. He afterward made his residence at Ipswich, where he preached a few occasional sermons. Soon his memory became a blank, he sunk into imbecility, and thus remained, until his death, on the 19th of October, 1807, when about seventy-seven years of age.

GRAY, William, was born in Lynn, Massachusetts, in 1751, and when quite a small boy, was apprenticed to a merchant in Salem. He finished his commercial education with Richard Derby, of that port; and such was his character for enterprise and strict integrity during his apprenticeship, that when, soon after its close, he commenced business for himself, he had the entire confidence and good-will of the whole community. Prosperity waited upon him in all his transactions, and in less than twenty-five years after he commeneed business, he was taxed as the wealthiest man in Salem, notwithstanding some of the largest fortunes in the United States belonged to men of that town. His enterprise and industry was wonderful; and at one time he had more than sixty sail of square-rigged vessels on the ocean. G. was a demoerat, and his sincerity was evinced by the fact that during the embargo, he took sides with Jefferson, notwithstanding all New England was in a blaze against the president, and it was an injury to the amount of tens of thousands of dollars to the great merchant's business. In the midst of the commercial distress, he removed to Boston, and having pleased the people while a State Senator, he was chosen lieutenant-governor of the Commonwealth. He used his immense riches for the wants of government, and never took advantages of the exigeneies of the times, to speculate in government securities. He died on the 4th of November, 1825, at about seventy-four years of age.

GREENOUGH, Horatio, was born in Boston, on the 6th of September, 1805. His genius, and his taste for art, were developed simultaneously in his early childhood; and hours devoted by other boys in romping play, were employed by him in carving toys for his companions, the implements of his *atelier* being a pencil, knife and scissors. One day he sat upon the doorstep of a neighbor, and with his pen-knife and a nail, he fashioned from plaster, in miniature form, the head of a Roman, copied from a coin. He was watched by the lady of the house, who became the possessor of that earliest of his works of art, and in after years gave him his first commission. For her he produced that beautiful ideal bust, of the *Genius of Love*. Sometimes G. would express his thoughts in Painting; sometimes in Poetry, but most frequently in Sculpture. To the latter art he dedicated his genius; and soon after the close of his collegiate studies, he went to Italy as a pupil of art and nature there. He took up his residence in Rome, and was the first American student of art who made tbe Eternal City his permanent abiding place. We cannot follow the artist in all his pleasant, laborious life, from the modelling of his *Abel*, in 1826, until the completion of *The Rescue*, in 1851. The work in which he took the greatest pride, because of the subject, was his colossal statue of *Washington*, completed in 1843, and now occupying the public square eastward of the Federal Capitol. He executed more than twenty other ideal groups or single statues, and a great many busts of living men, but that will be his chief memorial in the public mind. For many years in Florence his studio, a model of its class, was on the Piazza Maria Antonia; and there he dispensed a generous but unostentatious hospitality. Finally, in the autumn of 1851, he returned to his native land, ostensibly to erect his group of *The Rescue*, but really to breathe again the free air of the Republic. He chose Newport as his place of residence, and there he resolved to erect a studio, and leave his country no more. He had become acclimated in Italy, and the changeful seasons here disturbed him. Here he lacked the quiet social routine of Florence. All around him was activity to which he had not been accustomed, and his whole being beeame exeited. A brain fever ensued, and he expired after a few days' illness, on the 18th of December, 1852, forty-seven years of age.

GRIDLEY, Richard. At the opening of the war, in 1775, Richard Gridley was the only efficient American engineer in the army. He was a native of Boston, where he was born in 1711. He first appeared as an engineer in the provincial army, sent to capture the strong fortress of Louisburg, on Cape Breton, in 1745. After that event, he entered the regular army, and in 1755, he was lieutenant-colonel of infantry, and chief engineer. In 1758, G. served under General Amherst, and was with Wolfe, at Quebec. When the War for Independence began, the patriotism and skill of G. caused his appointment of chief engineer of the army that soon gathered around Boston; and under his directions, all the fortifications erected during the summer of 1775, and winter of 1776, in that vicinity, were constructed. In September, 1775, Congress gave him the commission of a major-general, and made him commander-in-chief of the Continental artillery, to which office Colonel Henry Knox suceeeded in November following. After the British left Boston, in March, 1776, G. was engaged in throwing up fortifieations at several points about the Harbor. He died at Stoughton, Massachusetts, on the 21st of June, 1796, in the eighty-fifth year of his age.

GRUNDY, Felix, was born in Berkeley county, Virginia, on the 11th of September, 1777, but nurtured in the wilderness, at a time when, to use his own forcible expression, "death was in almost every bush, and when every thicket concealed an ambuscade." Three years later, his father went, with his famity, to Kentucky, then "the dark and bloody ground." His father died when he was a lad, and his mother had him educated for the purpose of preparing for the medical profession. He finished his studies under Dr. Priestly, at Bardstown, Kentucky, when, preferring law, he prepared himself for thel egal profession, under the charge of Colonel George Nichols, then one of the ablest counsellors west of the mountains. G. was admitted to practice, in 1798, soon rose to eminence, and, in 1799, was chosen a member of the committee called to revise the constitution of Kentucky. He was elected to a seat in the legislature, the same year, and served in that body with distinction until 1806, when he was appointed one of the judges of Supreme Court of Errors and Appeals. He was soon afterward appointed chief justice of Kentucky. The salary was insufficient for the wants of a growing family, and he resigned the office, in 1808, and removed to Nashville, Tennessee, where he prosecuted his vocation with industry and great success. He ranked highest among the criminal lawyers of the West, and practiced in the courts of several of the States. His eloquence was pure and forcible; and he took the proud position, by general consent, as the head of the Tennessee bar. G. was elected to a seat in the Federal Congress, in 1811. The tempest of war was then brooding in the horizon, and G. was placed upon the Committee of Foreign Relations—the most important section of the House, at that time. He remained in that body until 1814, and was always a hearty, consistent, and sincere supporter of the administration of President Madison. At the close of the contest he returned to Nashville, and resumed the practice of his profession, but was soon called to duty in the State legislature, where he served for six years. In 1829, he was elected a Federal Senator, and by re-election he held a seat there during the whole eight years of Jackson's administration. From first to last, he was that chief magistrate's firm and cordial adherent and supporter. In 1839, he was called to the cabinet of Mr. Van Buren, as attorney-general of the United States; and, in 1840, he was again elected to a seat in the Federal Senate. He was not per-

mitted to occupy that exalted position again, for, in December following, he died, at the age of sixty-three.

HALE, NATHAN, was a son of Richard H., of Coventry, Connecticut, and was born in that town, twenty miles from Hartford, about the year 1754. He was graduated at Yale College, with distinguished approbation, in 1773, when the tempest of the Revolution was gathering force. He joined the Connecticut troops that hastened to Boston after the skirmishes at Lexington and Concord, and was with Captain (afterward Colonel) Knowlton in the battle on Breed's Hill. He continued with the army under the immediate command of Washington, until the following year, and participated in the battle near Brooklyn, and the retreat of the American army, from Long Island. At that time Knowlton was in command of a regiment, called *Congress' Own*, that assumed a sort of body-guardianship to the commander-in-chief, and young H. held a captain's commission in it. While the American army were upon Harlem Heights, and the great body of the British were yet on Long Island (in the vicinity of Brooklyn, and of the present Astoria), Washington was very anxious to ascertain the exact condition of the enemy's forces. He applied to Colonel Knowlton for a judicious person to go as a spy into the British camp. H. volunteered for the service, and bearing instructions from Washington, he crossed Long Island Sound from the Connecticut shore, visited the British camps, made notes and sketches, unsuspected, and was about to embark from Huntington, to Connecticut, when he was discovered and exposed, it is said, by a Tory relative, and was made a prisoner. He was taken to Sir William Howe's head-quarters at Turtle Bay, confined in Beekman's green-house in the garden, until morning, and then, without the form of a regular trial, was handed over to Cunningham, the brutal provost-marshal in New York, for execution as a spy. He would not allow him to have the company of a clergyman, nor the use of a Bible; and even destroyed the letters which the victim had written to his mother and sisters during the night. He was hanged upon an apple-tree, and his body was buried in a grave beneath its shadow. H.'s last words were, "I only regret that I have not more lives to give to my country."

HARRISON, BENJAMIN, was born at Berkeley, the seat of his father, on the James River. He was educated at the college of William and Mary, at Williamsburg, but on account of the sudden death of his father, and some difficulty with one of the professors, he was not graduated, and never took his degree. In 1764, young H. was elected a member of the Virginia House of Burgesses, where he soon became an influential leader. He was chosen speaker of that body, and when the Stamp Act excitement shook royal power in Virginia, the governor tried to win him to the support of government, by offering him a seat in his council. H. rejected the offer, boldly avowed his republican principles, and from that time became identified with the revolutionary party in Virginia. He was one of the representatives of Virginia in the first Continental Congress, when his relative, Peyton Randolph, was chosen its president. In the autumn of 1775, he was one of the committee of Congress who visited the American army at Cambridge, to devise plans for the future, with Washington; and the following year he warmly supported, and affixed his signature to, the Declaration of Independence. He was a member of the *Foreign Committee* until its dissolution in 1777, and at that time he returned to Virginia, and took his seat in the House of Burgesses. He was chosen speaker, and held that station until 1782, when he was elected governor of Virginia. H. served as governor two terms, and then retired to private life. He was again brought into public service by being chosen governor, in 1791. He died in April, 1791. William Henry H., the ninth President of the United States, was his son.

HAYNE, ROBERT Y. The names of Daniel Webster and Robert Y. Hayne will ever be associated in the legislative annals of the Republic, because their great debate in the United States Senate, in 1830, was one of the most remarkable for logic and eloquence which ever occurred in that body. H. was more that nine years the junior of his powerful New England antagonist, having been born on the 10th of November, 1791, near Charleston, South Carolina. His education was obtained at a grammar-school in Charleston, and at the age of seventeen he commenced the study of law. He had not yet reached his majority, when the clouds of impending war between the United States and Great Britain gathered darkly. Having secured his admission to the bar, he volunteered his services, early in 1812, for the military defence of the sea-board, and entered the army as lieutenant. He rose rapidly to the rank of major-general of his State militia, and was considered one of the best disciplinarians in the South. H. first appeared as a legislator, in 1814, when he was elected to a seat in the South Carolina Assembly. There he was distinguished for his eloquence, and his firm support of President Madison's administration, in its war measures. In 1818, he was chosen Speaker of the Assembly; and the same year he received the appointment of attorney-general for the State. In every duty to which he was called, young H. acquitted himself nobly; and the moment he had reached an eligible age, he was elected to a seat in the Senate of the United States, where, for ten years, he represented South Carolina with rare ability. He was an ever-vigilant watchman upon the citadel of State Rights, and as a member of the famous "Union and State Rights Convention," held towards the close of 1832, he was chairman of the committee of twenty-one who reported the "ordinance of nullification," which alarmed the country, and called forth President Jackson's puissant proclamation. About a fortnight after the adoption of the celebrated "ordinance," H. was chosen governor of the State, and a few days after President Jackson's proclamation reached him, he issued a counter-manifesto, full of defiance. Civil war seemed inevitable, but the compromise measures proposed by Mr. Clay, and adopted by Congress early in 1833, averted the menaced evil. H. filled the executive chair, with great energy, until 1834; and, on retiring from that exalted office, he was elected mayor of Charleston. His attention was now specially turned to the great subject of internal improvements; and, in 1837, he was elected president of the "Charleston, Louisville, and Cincinnati Railroad Company." He held that office until his death, which occurred at Ashville, North Carolina, on the 24th of September, 1841, when in the fiftieth year of his age.

HENDERSON, RICHARD, was born in Hanover county, Virginia, on the 20th of April, 1735. His father emigrated to Granville county, North Carolina, in 1745, and being appointed sheriff of that district, Richard had an opportunity of learning many useful lesssons in matters pertaining to law. He prepared himself for the legal profession, arose rapidly to the highest rank, accumulated a competent fortune, and, when the insurrectionary movements in that section of the county, known as *the Regulator War*, occurred, he was a judge of the superior court. Bold, ardent, and adventurous, he resolved to go beyond the mountains, and there, in the beautiful country traversed by Boone, he commenced a scheme of land speculation, in 1774, more extensive than any known in the history of our country. He formed a company, of which he was chosen president, and by a treaty held at Wataga, with the heads of the Cherokee nation, he purchased the whole land lying between the Cumberland river and mountains, and the Kentucky river, which comprised more than one-half of the present State of Kentucky. H. took possession of the country in the name of the company, in the spring of 1775. Governor Martin, of North Carolina, proclaimed the purchase to be illegal.

The legislature of Virginia did the same, but H. paid no regard to their fulminations against him, and proceeded to establish a proprietary government, in imitation of the old colonies. Its capital was Boonesborough, and its title was TRANSYLVANIA. The State of Transylvania as an independent republic did not long exist, for Virginia and Carolina took efficient means to destroy it. The treaty with the Cherokees, and the purchase of their lands, were declared null. Yet they did not deprive the company of all advantages. North Carolina and Virginia each granted to them two hundred thousand acres. Relinquishing all political claims, H. opened a land office on the site of Nashville, in 1779, for the sale of this legally-granted domain. He died on the 30th of January, 1785, fifty years of age.

HOLMES, ABIEL, was born at Woodstock, Connecticut, in December, 1763. He was graduated at Yale College at the age of twenty years, and went immediately to South Carolina as an instructor in a private family. He entered the ministry, as pastor of a church at Midway, Georgia, in the autumn of 1785. There he remained until the summer of 1791, when he visited New England, and accepted an invitation to become pastor of the first Congregational Church at Cambridge, Massachusetts. He was ever studious, and Biography and History had great charms for him. In 1798, he wrote and published a Life of President Stiles, of Yale College; and, in 1805, his *Annals of America* was first published. An edition was printed in England, in 1813; and, in 1829, a much-improved edition, in which the record is continued until 1827, was published at Cambridge. With this edition of *Holmes' Annals*, the *American Register* from 1826 to 1830 inclusive, and the *American Almanac* from 1830 to the present time, a library has an unbroken record of events in the United States from the earliest settlements. In addition to his works just mentioned, H. published about thirty pamphlets, consisting chiefly of sermons and historical disquisitions. He died at Cambridge, Massachusetts, June 4th, 1837, almost seventy-four years of age.

HOOKER, THOMAS. A remarkable man was the Rev. Thomas Hooker, the first minister of Cambridge, Massachusetts, and one of the pioneer settlers in Connecticut. He was born in Leicestershire, England, in 1586, and was educated in Emanuel College, Cambridge. He began his labors as a Christian minister at about the time of the death of James the First, when Archbishop Laud began to harass the non-conformists. In 1630, H. was silenced, because of his non-conformity to the Established Church, and he founded a grammar school at Chelmsford. His influence was great; and falling under the ban of Laud, he was obliged to fly to Holland, where he became an assistant minister to Dr. Ames, both at Delft and Rotterdam. He came to America with the Rev. Mr. Cotton, in 1633, and was made pastor of the church at Cambridge in the autumn of that year. H. was one of the most powerful preachers of his time, and wrote much and well, on religious subjects. He was a man of great benevolence, and in every sphere of life he was eminently *useful*. Died at Hartford, of an epidemic fever, July 7, 1647, sixty-one years of age.

HOPKINS, STEPHEN. Next to Doctor Franklin, Stephen Hopkins, of Rhode Island, was the oldest member of the Continental Congress, who signed the Declaration of Independence. He was born in that portion of the town of Providence now called Scituate, March 7, 1707. H. was a delegate from Rhode Island in the first colonial convention, held at Albany, in 1754, and two years afterward he was elected governor of Rhode Island. That position he held, with but a single interruption, until 1767; and he was very efficient in promoting the enlistment of volunteers in his province, for the expeditions against the French and Indians. He even took a captain's commission, and placed himself at the head of a volunteer corps, in 1757, but a change in events rendered their services unnecessary, and they were disbanded. When the quarrel with the mother country commenced, H. took a decided stand in favor of the colonists, and officially and unofficially he labored incessantly to promote a free and independent spirit among his countrymen. When, in 1774, a general Congress was proposed, H. warmly advocated the measure, and was chosen one of the delegates for Rhode Island. In 1775, he was a member of the Committee of Public Safety, in Rhode Island, and was again elected to Congress. There he advocated political independence; and in the summer of 1776, he affixed his remarkable signature to the noble manifesto which declared it. H. was elected to Congress, for the last time, in 1778, and was one of the committee who perfected the *Articles of Confederation* for the government of the United States, then fighting under one banner, for independence. He was a distinguished mathematician, and rendered efficient service to scientific men in observing the transit of Venus, in 1769. He died on the 19th of July, 1785, in the seventy-eighth year of his age.

HOPKINSON, JOSEPH. The author of our spirited national song, *Hail Columbia*, was highly distinguished for other intellectual achievements. But that production was sufficient to confer upon him the crown of earthly immortality. He was a son of Francis Hopkinson, one of the signers of the Declaration of Independence, and was born in Philadelphia, on the 12th of November, 1770. He was educated in the University of Pennsylvania, and then studied law, first with Judge Wilson, and afterward with William Rawle. He was admitted to the bar, at the close of 1791, and commenced its practice at Easton, on the Delaware. He was beginning to be quite successful there, when he returned to Philadelphia, and there took a high rank in his profession. In 1815, and again in 1817, H. was elected a representative of Philadelphia in the Federal Congress, and ranked among the first of the many sound statesmen who graced that body at that interesting period of our political history. In 1828, President Adams appointed him a judge of the United States Court, for the Eastern District of Pennsylvania. That office had been filled by his father and grandfather; and he performed its duties with dignity and marked ability, until his death, which occurred at Philadelphia, January 15, 1842, at a little more than seventy-one years of age.

HOWARD, JOHN EAGAR, was born in Baltimore county, Maryland, on the 4th of June, 1752. He was a very young man when the War for Independence commenced, and entered eagerly into the plans of the republicans. He became a soldier in 1776, and commanded a company of militia in the service known as The Flying Camps, under General Hugh Mercer. In that capacity he served at White Plains, in the autumn of that year; and when, in December, 1776, that corps was disbanded, he accepted the commission of major in one of the Continental battalions of his native State. Then commenced his useful military career. In the spring of 1777, he joined the army under Washington, at Middlebrook, in New Jersey, but returned home in June, on account of the death of his father. He again joined the army, a few days after the battle on the Brandywine, in September; distinguished himself for cool courage in the engagement at Germantown; and afterward wrote a graphic account of the whole affair. He was also at the battle on the plains of Monmouth the following year; and in June, 1779, he was commissioned a lieutenant-colonel in the 5th Maryland regiment, "to take rank from the 11th day of May, 1778." In 1780, he went to the field of duty, in the South, when DeKalb marched thither with Maryland and Delaware troops, with the vain hope of aiding the besieged Lincoln, at Charleston. He served under Gates until after

the disastrous battle near Camden, in August, and his corps formed a part of the Southern army, under General Greene, at the close of that year. In January following, he won unfading laurels by his skill and bravery at the Cowpens, under Morgan, and received a vote of thanks and a silver medal from Congress. At Guilford, a month afterward, he greatly distinguished himself when Greene and Cornwallis contended for the mastery. There he was wounded, returned home, and did not engage in active military services afterward. In autumn of 1788, he was drawn from his retirement, to fill the chair of chief magistrate of his native State. In 1794, he declined the proffered commission of major-general of militia, and the following year he also declined the office of Secretary of War, to which President Washington invited him. He was then a member of the Maryland Senate; and in 1796, he was chosen to a seat in the Senate of the United States, where he served until 1803. Then he retired from public life. He died on October 12, 1827, at the age of seventy-five.

HOWE, Robert, was born in Brunswick, North Carolina, but both history and tradition are silent respecting the time of his birth and his death. He was appointed colonel of the first North Carolina regiment, in 1775, and in December of that year, he joined Woodford, of Virginia, at Norfolk, in opposition to Governor Dunmore and his motley army. For his gallantry there, Congress appointed him a brigadier in the Continental army, and ordered him to Virginia. He was with the army, at the North, during portions of 1776 and 1777; and in the spring of 1778, he was promoted to major-general, and placed in chief command of the Southern army. At his head-quarters at Savannah, he planned a campaign against the British and Tories in Florida, in the summer of 1778. It failed in its execution; and at the close of that year, he was driven from Savannah, by a British force under lieutenant-colonel Campbell. These reverses caused him to be censured unjustly; and when General Lincoln took command of the Southern army, H. attached himself to that of the northern department, the following year. He co-operated with Wayne in his attack upon Stony Point, on the Hudson, in 1779. He was on duty in the vicinity of West Point and the Hudson Highlands from that time until near the close of the war. Washington appointed him, in two instances, to discharge the important duty of quelling a mutiny, first in the New Jersey line, and then in that of Pennsylvania. He always had the unbounded confidence of the commander-in-chief.

HUMPHREYS, David, was born in Derby, Connecticut, in 1753, and was graduated at Yale College, in 1771. A few months afterward, he went to reside, as a tutor, in the family of Colonel Philipse, on the Hudson. When the war of the Revolution began, we find him at the head of a company of Connecticut militia. He afterward joined the Continental army, with a captain's commission, and was under the immediate command of General Putnam until 1778, when that officer made him one of his aids, with the rank of major. He held that commission until the autumn of 1780, when he was promoted to the office of aid to Washington, with the rank of colonel. He remained in the military family of the commander-in-chief until the close of the war. For his valor at Yorktown, where Cornwallis was captured, Congress honored him with a vote of thanks, and the present of an elegant sword. In May, 1784, he was appointed secretary to the commission for negotiating treaties with foreign powers, and with his friend Kosciusczko, accompanied Mr. Jefferson to Paris. He returned in 1786, and was elected to a seat in the Connecticut legislature. He was appointed to the command of a regiment raised for the western service, but was not called to the field; and from 1786 till 1788, he resided at Hartford. By invitation of Washington, he resided in the family of the great Patriot from 1788 until appointed by his illustrious friend minister to Portugal, in 1790. He went thither in 1791, and returned in 1794. He was soon afterward appointed minister to Spain, and took up his abode at Madrid, early in 1795. While there he negotiated treaties with Tripoli and Algiers, and was successful in all his diplomatic duties. He died February 21, 1818, aged sixty-five years.

HUTCHINSON, Thomas, was born in Massachusetts, in 1711, and was graduated at Harvard College in 1727. His father had been a public man, and Thomas studied English constitutional law, with the intention of becoming a statesman. He first embarked in commercial pursuits, however, but did not succeed. For ten consecutive years he was elected a member of the Massachusetts Assembly, and he was Speaker of that body for three years. In 1752, he succeeded his uncle as judge of probate; and from 1749 until 1756, he was a member of the governor's council. In 1758, he was elected lieutenant-governor of the province, and held that office until 1771, when he was appointed governor. In the meanwhile he had held the office of chief justice, after the death of Judge Sewall, in 1760. That office had been promised to the elder Otis, and the disappointment gave a keener point to the opposition of the younger Otis to the person and administration of H., when the dispute between Great Britain and her colonies was progressing. Other things had made him unpopular with many of the people. In 1748, he was chiefly instrumental in abolishing the paper currency of the colony, and substituting gold and silver therefor; and he favored the law granting writs of assistance, or general search-warrants for contraband goods, by which no man's house was safe from prying officials. He was also active, with Governor Bernard, in bringing troops to Boston, in 1768, to awe the people; and much of the odium of the massacre in Boston, in March, 1770, was cast upon him. These things created a strong popular feeling against him; and when, in 1772, certain letters which he had written to a former member of Parliament, were sent back from England to Boston by Dr. Franklin, and published, in which he gave advice, in disparagement of popular liberty in America, the people could scarcely be restrained from manifesting their indignation by inflicting personal violence upon him. He was compelled to leave the country in 1774, when he went to England. He died at Brompton, in that realm, on the 3d of June, 1780, sixty-nine years of age.

IZARD, Ralph, was born in 1742, at the family estate called *The Elms*, about seventeen miles from Charleston, South Carolina, and at a very early age was sent to England to be educated. He pursued preparatory studies at Hackney, and completed his education at Christ College, Cambridge. On arriving at his majority, he returned to America, took possession of his ample fortune left by his father, and, having no taste for the professions, he divided his time between literary and agricultural pursuits, and the pleasures of fashionable life. In 1771, he went to London. His ample fortune allowed the indulgence of a fine taste, and books, painting, and music, were his chief delight. Yet he possessed a thoroughly republican spirit, and refused offers to be presented to court, because etiquette would compel him to bow the knee to the king and queen. War commenced, and, finding it difficult to return to America, he went to France, in 1777, when Congress appointed him commissioner to the Tuscan court. Circumstances prevented his presenting himself to the Duke of Tuscany, for a long time, and he asked permission of Congress to resign his commission and return home. In the meanwhile the false representations of Silas Deane had induced Congress to recall him. That body afterward made ample amends for the injustice. He remained in Paris until 1780, and in the meanwhile had served his country efficiently in many ways, officially and unofficially. On one occasion he pledged his

whole estate as security for funds needed by Commodore Gillon, who had been sent from South Carolina to Europe, to purchase frigates. On his return to America, in 1780, he immediately repaired to the head-quarters of Washington, and was there when the treason of Arnold was discovered. It is evident from his correspondence that he was chiefly instrumental in procuring the appointment of General Greene to the command of the Southern army, toward the close of that year. For that service he received the thanks of the governor of South Carolina. Early in 1781, he was elected to a seat in the Continental Congress, where he remained until peace was established. He was chosen the first United States Senator from South Carolina, for the full term of six years, during which time he was a firm supporter of the administration of President Washington. In 1795, he took final leave of public life, and once more sought repose, with the pleasant anticipations of many years of earthly happiness. But two years afterward he was suddenly prostrated by paralysis. He died on the 30th of May, 1804, at the age of sixty-two.

JACKSON, James. When the British army was about to leave Savannah, in July, 1782, General Wayne, then in command in Georgia, chose an accomplished young man of twenty-five, whose valor was the theme for praise in the Southern army, to receive the keys of the city from a committee of British officers. That young officer was Major James Jackson, a native of Devonshire, England, where he was born on the 21st of September, 1757. He came to America, with his father, in 1772, and studied law in Savannah. He loved his adopted country, and in 1776, shouldered his musket, and was active in repelling an invading force that menaced Savannah. In 1778, he was appointed brigade major of the Georgia militia, and was wounded in a skirmish on the Ogeechee, in which General Scriven was killed. At the close of that year he participated in the unsuccessful defence of Savannah; and when it fell into the hands of Colonel Campbell, he was among those who fled into South Carolina and joined Moultrie's brigade. His appearance was so wretched and suspicious, during that flight, that he was arrested by some Whigs, and tried and condemned as a spy. They were about to hang him, when a gentleman of reputation, from Georgia, recognized him, and saved his life. He was active in the siege of Savannah by Lincoln and D'Estaing, in October, 1779, and in 1780, he was in the battle at Blackstocks under Colonel Elijah Clark, of Georgia. General Andrew Pickens made him his brigade major, in 1781, and his fluent speech expressing his ardent patriotism, infused new zeal into that corps. He was at the siege of Augusta, in June, 1781, and when the Americans took possession, Jackson was left in command of the garrison. Subsequently he performed more active and arduous services, as commander of a legionary corps; and at Ebenezer, on the Savannah, he joined General Wayne, and was the right arm of his force until the evacuation of the Georgia capital, in 1782. As some reward for his patriotic services during the war, the legislature gave him a house and lot in Savannah. He married in 1785, and the next year was commissioned brigadier-general of the State-militia. In 1788, he was elected governor of Georgia, but modestly declined the honor on account of his youth and inexperience, being then only little more than thirty years of age. He was one of the first representatives of Georgia in Congress, after the organization of the Federal Government; and from 1792 to 1795, was a member of the United States Senate. In the meanwhile he was promoted to major-general, and never failed in the faithful performance of his duties, civil and military. The State Constitution of Georgia, framed in 1798, was chiefly the work of his brain and hand. From that year until 1801, he was governor of the State, when he was again chosen United States senator. He held that office until his death, which occurred at Washington city, on the 19th of March, 1806, at the age of forty-nine.

JONES, David, was born in New Castle county, Delaware, on the 12th of May, 1736, and, as his name imports, was of Welsh descent. He was educated for the gospel ministry under the Rev. Isaac Eaton, at Hopewell, New Jersey, and for many years was pastor of the Upper (Baptist) Freehold Church. In 1776, he was appointed chaplain to Colonel St. Clair's regiment, and proceeded with it to the Northern Department. He was on duty at Ticonderoga, when the British approached, after the defeat of Arnold on the Lake below, and there preached a characteristic sermon to the soldiers, which was afterward published. He served through two campaigns under General Gates, and was chaplain to General Wayne's brigade in the autumn of 1777. He was with that officer at the Paoli Massacre, where he narrowly escaped death, but lived to make an address at the erection of a monument there, over the remains of his slaughtered comrades, forty years afterward. He was in the battles at Brandywine and Germantown, suffered at White Marsh and Valley Forge, and continued with Wayne in all his varied duties from the battle at Monmouth in June, 1778, until the surrender of Cornwallis, at Yorktown, in October, 1781. Such was his activity as a soldier, that General Howe offered a reward for him, while the British held possession of Philadelphia; and on one occasion a detachment of soldiers were sent to the Great Valley to capture him. At the close of the war, he returned to his farm, and resumed his ministerial labors. When General Wayne took command of the army in the North-western Territory, in 1794, J. was appointed his chaplain, and accompanied him to the field; and when, again, in 1812, a war between the United States and Great Britain commenced, the patriotic chaplain of the old conflict entered the army, and served under Generals Brown and Wilkinson, until the close of the contest. He was then *seventy-six years of age.* He died on the 5th of February, 1820, aged eighty-four.

KINNISON, David, was the latest survivor of the notable band of patriots, in 1773, known as *The Boston Tea Party.* He was born in Old Kingston, Maine, on the 17th of November, 1736, and was employed in farming until the tempest of the Revolution began to lower. He was a member of a secret club, who were pledged to destroy the obnoxious article of Tea, wheresoever it might be found; and when the East India Company's ships had arrived at Boston, K. and others hastened thither, were among the "Mohawks" in the gallery of the Old South Church, and assisted in casting the two cargoes of tea into the waters of Boston harbor, on the evening of the 16th of December, 1773. K. remained in the vicinity of the New England capital, working on a farm, until the spring of 1775, when, as a minute-man, he participated in the events at Lexington and Concord. With his father and two brothers, he fought in the battle of Bunker's Hill; and after the British were driven from Boston, he accompanied the American army to New York. From that time until the autumn of 1781, he led the life of a Continental soldier, under the immediate command of Washington most of the time. Then, while engaged as a scout in Saratoga, he was captured by some Mohawk Indians, and did not regain his liberty until peace came, after a captivity of more than eighteen months. At the close of the Revolution, he resumed the labors of agriculture, at Danville, Vermont, where he resided about eight years, and then removed to Wells, in Maine. There he lived until the commencement of the war with Great Britain, in 1812, when he again went to the field as a private soldier. He was under General Brown at Sackett's harbor; and in the battle at Williamsburg, on the St. Lawrence, he was badly wounded in the hand by a grapeshot. That was the first and only injury he had ever received in battle, but

by accidents afterward, his skull had been fractured; his collar bone and both legs, below the knees, had been broken; the heel of a horse had left a deep scar on his forehead, and rheumatism had dislocated one of his hip joints. As he forcibly expressed it, he had been "completely bunged up and stove in." K. was an illiterate man, and possessed none of the elements of greatness. He was eminent because of the peculiar associations of his life, his long experience, and his remarkable longevity. He learned to write his name when in the revolutionary camp; and he was sixty-two years of age when his granddaughter taught him to read. He had married and buried four wives, who had borne him twenty-two children. When he related this narrative, he had lost all trace of his relatives, and supposed himself childless. His pension of eight dollars a month was insufficient for his wants, and until his one hundred and tenth year, he added sufficient for a livelihood, by the labor of his hands. Then a benevolent stranger, in Chicago, gave him a home. He was little less than six feet in height, with powerful arms, shoulders, and chest; and at the age of one hundred and two years, he was seen to lift a barrel of cider into a wagon, with ease. When one hundred and ten, he walked twenty miles in one day. At eighty, his sight and hearing failed. Both were restored at ninety-five, and remained quite perfect until his death. That venerable man died at Chicago, Illinois, on the 24th of February, 1852, in the one hundred and sixteenth year of his age.

KIRKLAND, Samuel, was born at Norwich, Connecticut, on the 1st of December, 1741, and through life exhibited the indomitable courage, energy, and perseverance of his Scotch lineage. Of his childhood we know very little. In early youth he entered Dr. Wheelock's school at Lebanon, and prepared to be a missionary among the Indians. There he was much beloved for his gentleness, a quality which endeared him to his fellow-students at Princeton, where he pursued a collegiate course of studies from 1762 until 1764. He left the institution before completing his education, and dwelt among the Seneca Indians from 1764 until 1766. He received his collegiate degree, however, in 1765; and in June, 1766, he was ordained, at Lebanon, as a missionary to the Indians, under the sanction of the Scotch Society for propagating the gospel among the heathen. K. was chaplain at Fort Schuyler (formerly Fort Stanwix, now Rome, in Oneida county) for some time, and in that capacity he accompanied General Sullivan in his expedition from Wyoming, against the Senecas, in 1778. After that he was at Fort Schuyler and vicinity, or with his family at Stockbridge, until peace was declared. In subsequent treaties with the Indians, he was very active and useful. He accompanied a delegation of Senecas to Philadelphia, in 1790, and was rewarded by the conversion to Christianity of the great chief, Cornplanter, with whom he travelled, instructed, and convinced. In 1791, he made a census of the Six Nations, and at the same time he succeeded in establishing an institution of learning, which was incorporated in 1793, under the title of *The Hamilton Oneida Academy*. This was the origin of Hamilton College. K. continued his labors among the Oneidas until his death, which occurred after a brief illness, at his residence in Paris, Oneida county, on the 28th of February, 1808, in the sixty-seventh year of his age.

LAMB, John, was born in the city of New York, on the 1st of January, 1735. He received a good common education, and learned the business of his father, that of an optician and mathematical instrument maker. He abandoned it in 1760, and became an extensive wine merchant. Through all the exciting times until the kindling of the War for Independence, he was extensively engaged in the liquor trade, and, at the same time, was one of the most active politicians of the day, after the passage of the Stamp Act had aroused the American people. He spoke French and German fluently, was a good scholar, and was exceedingly expert in the use of his tongue and pen. In 1775, he entered the artillery service of the army, with the commission of captain. He accompanied Montgomery to Quebec at the close of that year. He was severely wounded there, in the cheek, by a grape-shot, and was made prisoner. Soon after that he was promoted to major, and appointed to the command of the artillery in the Northern Department, but was not exchanged, and allowed to enter the service again, until early in 1777, when Congress gave him the commission of lieutenant-colonel, under the immediate command of General Knox. He shared in the dangers and honors of the final victory at Yorktown. After the war, he served his fellow-citizens faithfully in the legislature of his native State. After the organization of the federal government, Washington appointed him collector of customs at the port of New York, and he held that office until his death, on the 31st of May, 1800, at the age of sixty-five.

LANGDON, John, was born in the town of Portsmouth, New Hampshire, in 1740. He was educated at a public grammar school, prepared himself for mercantile life, and prosecuted business upon the sea until the great ocean of public feeling began to be agitated by the tempest of the Revolution. Then he espoused the republican cause, and his first overt act of rebellion and treason was the seizure of the powder and arms at Portsmouth. In January, 1775, he was chosen a delegate to the Continental Congress. There he remained until 1776, when affairs in his own State demanded his presence there. In 1777, he was Speaker of the New Hampshire Assembly; and when Burgoyne was approaching the Hudson with his invading army, and the whole North and East were in commotion, L. offered to loan the State three thousand hard dollars, and the avails of his silver plate and some West India goods, to equip men for the army under Gates, remarking that if the American cause should triumph, he would get his pay, if not, his property would be of no value to him. With many members of the New Hampshire legislature, he served as a volunteer in the battles at Saratoga, which resulted in the capture of Burgoyne. L. was president of the New Hampshire convention that framed the State Constitution, in 1779; and the same year he was appointed Continental agent to contract for the building of some ships for the service of Congress. He was again elected to a seat in Congress, in 1783, and in March, 1785, he was chosen chief magistrate of his native State. He represented New Hampshire (with Nicholas Gilman) in the convention which framed the Federal Constitution, was its zealous supporter, and after serving another term as governor, or president of his State, was chosen to a seat in the United States Senate, where he served about ten years. He was afterward an active member of the State Legislature, and was governor of the State almost four years. He retired into private life, in 1812, whither he carried the most profound respect of his countrymen. He died at his birth-place, on the 18th of September, 1819, seventy-eight years of age.

LAWRENCE, Abbott, was born at Groton, Massachusetts, on the 16th of December, 1792, and received his education at the local school in the place of his nativity. At the age of sixteen years young L. entered the store of his brother Amos, in Boston, as clerk. After five years of faithful service, his brother took him into partnership. Soon the business horizon was clouded by the gathering storm of war between the United States and England, and Abbott became a bankrupt. He applied to the War Department for a commission in the army, but before his application was acted upon, peace was proclaimed. With the generous aid of his brother Amos, the two commenced business again, after the war, and Abbott went to England

to purchase goods, and forward them to Boston. About 1819 his mind was much occupied with the subject of domestic manufactures, and with uncommon foresight, Amos and Abbott L. ceased importing British goods, and employed their energies and capital in the establishment of home manufactures. From the period of the establishment of cotton manufactures, that subject occupied much of the thought and labors of Abbott L.; and in 1827, he was a delegate in a convention held at Harrisburg, in Pennsylvania, whose memorial to Congress resulted in the tariff act of 1828, that so aroused the violent opposition of the cotton-producing States. In 1834 Mr. Lawrence was elected a member of the Federal House of Representatives, and served on the important Committee of Ways and Means. Having no desire for official station, other than a willingness to serve the public when absolutely necessary, he declined a re-election; but, four years later, he yielded to the importunities of friends, and was again sent to Congress. At Washington city he suffered long sickness from fever, and was compelled to resign his seat, and return home. There he was efficient in quieting the public feeling aroused by the suspension of specie payments by the banks. In his judgment the people had implicit confidence; and Daniel Webster showed great sagacity when he suggested L. as the proper person to negotiate with the British Commissioner upon the settlement of the North-eastern boundary question. In 1843, L., with his family, embarked for England, in quest of health. The vessel in which they departed was wrecked, but L. and his family arrived safely at Halifax, and from there continued their voyage. President Taylor afterward invited him to a seat in his cabinet, but he declined the honor. Then the mission to England was offered him, and this he accepted. The duties of the station he performed with great credit to himself, and the honor of his country. After three years' service as a diplomat, he resigned, and returned home, followed by the warmest expressions of regard from the best men of England. He died on August 18, 1855, at the age of almost sixty-three years.

LEDYARD, John. The world has scarcely produced a more indefatigable traveller and explorer than L., the eldest son of a sea captain, who resided at Groton, Connecticut. There L. was born in 1751. His father died while he was yet a lad; and after his mother had married again, he was taken into the family of his grandfather, at Hartford, and treated as a son. His guardian died, when he was about eighteen years of age, and he entered Dortmouth College as a divinity student. He became dissatisfied, and resolved to leave the institution. He had already been a wanderer among the Five Nations in New York for three months, and tasted the pleasures of exciting travel. Having no money to pay travelling expenses to Hartford, he constructed a canoe, laid in "sea stores" contributed by kind friends, and all alone he made a perilous voyage down the winding Connecticut and its numerous rapids, to Hartford, a distance of one hundred and forty miles. This first adventure revealed the spirit within. He soon made his way to New London, and shipped as a common sailor, for Gibraltar. There he joined the army, but being released, he made his way back by way of the Barbary coast and the West Indies in 1771. He then sailed from New York to England, where he entered the navy, and as corporal of marines, accompanied Captain Cook in his third and last great voyage. Ever brave and resolute, he became the favorite of his commander, and was frequently intrusted with little enterprises, which required skill and courage. He was with Cook when he was killed by the people of the Sandwich Islands, in 1778. After visiting the shores of Kamschatka, the expedition returned to England, and L. came to America. He arrived after an absence of eight years, and took lodgings under his mother's roof at Southold, Long Island, without being recognized by her, for some hours. The war of the Revolution was then in progress, and L. could not consistently remain among the enemies of his country, so he crossed over to Connecticut, joined his friends at Hartford, and there wrote an account of the voyage with Captain Cook. L. now planned a voyage to the north-west coast of America, but received very little encouragement. He sailed for Cadiz, thence to L'Orient, and going to Paris, he had an interview there with Mr. Jefferson and La Fayette. They approved of his projected voyage, for commercial purposes, to the north-west coast, and Paul Jones, then in Paris, entered heartily into the scheme. The plan failed, however, and L. conceived the bold project of making a journey by land, through the Russian dominions, to Behring's Straits, by way of Kamschatka, and thus reach the north-west coast. He went to London, and Sir Joseph Banks and other scientific gentlemen contributed funds to aid him in his enterprise. He proceeded to Hamburg, thence to Copenhagen and Stockholm; and without a companion he traversed the country north of the Gulf of Bothnia, under the Arctic circle, and made his way to St. Petersburg. There he procured a passport from the Empress Catharine, and started for Siberia, over the Ural Mountains. After dreadful hardships, which few men could have endured, he reached Yakutsk, on the great Lena river, six thousand miles eastward of St. Petersburg. He pushed on further to the Kamschatkan Sea, but finding much ice, he returned to Yakutsk, to await the opening of spring. There, for reasons unknown to him, he was suspected of being a spy, and was seized by two Russian soldiers, in the name of the Empress. In the depth of winter he was conveyed through the north of Tartary, by the way of Moscow, to the confines of Poland, and there his conductors wished him a pleasant journey, and told him he would be hanged if he entered the Russian dominions again. Ragged and penniless, he made his way to Konigsberg, where a correspondent of Sir Joseph Banks gave him five guineas, with which he proceeded to England. There he found a project on foot, for exploring the interior of Africa. L. at once engaged, with enthusiasm, in the enterprise. When one of the managers of the association, which had been formed for the purpose, asked L. how soon he would be ready to start, he promptly replied, "To-morrow morning." After writing to his mother, he sailed from London, in June, 1788, reached Cairo on the 19th of August, and then prepared to penetrate the interior. He joined a caravan for Sennaar, and was on the point of departure, with high hopes, when he was attacked by a bilious fever, which terminated his life on the 17th of January, 1789, at the age of thirty-seven.

LEE, Ann, was born in Manchester, England, about the year 1736. Her father was a blacksmith, and she was taught the trade of cutting fur for hatters. She married young, and had four children, who all died in infancy. At the age of twenty-two years, she became a convert to the doctrines of James Wardley, a Quaker, who preached the holiness of celibacy, and the wickedness of marriage, and whose followers, because of the great agitations of their bodies when religiously exercised, were called Shakers. After nine years of discipline, she opened her mouth as a teacher; and in 1770, while confined in prison as a half-crazed fanatic, she pretended to have had a revelation of great spiritual gifts. She declared that in her dwelt the "Word;" and her followers say, "the man who was called Jesus, and the woman who was called Ann, are verily the two great pillars of the church." She was acknowledged to be a spiritual mother in Israel, and is known by the common appellation of "Mother Ann." She came to New York in 1774, with her brother and a few followers; and in the spring of 1776, they settled at Niskayuna (now Watervliet, opposite Troy), where the sect still flourishes. Some charged Mother Ann with witchcraft; and vigilant Whigs, knowing that she preached against war in every shape, suspected her of secret correspondence with her countrymen,

the British. A charge of high treason was preferred against her, and she was imprisoned in Albany during the summer of 1776. In the autumn she was sent as far as Poughkeepsie, with the intention of forwarding her to New York, within the British lines. She remained a prisoner at Poughkeepsie until some time in 1777, when she was released by Governor Clinton. She then returned to Watervliet. Persecution had awakened sympathy for her, and her followers greatly increased. A wild revival movement in the vicinity, in 1780, poured a flood of converts into her lap, and she deluded the silly creatures with the assertion that she was the "woman clothed with the sun," mentioned in the Apocalypse. She told them that she daily judged the dead of all nations, who came to her, and that no favor could be had, except through a confession of sins to her. She became a *Pontifix Maximus*—a second Pope Joan—and under her directions, the faithful discarded all worldly things, and gave into her hands all their jewels, knee-buckles, money, and other valuables. She excited their fear and admiration by mutterings, groans, and strange gestures; and introduced dancing, whirling, hopping, and other eccentricities, into the ceremonials of pretended worship. Mother Ann declared to her deluded followers that she would not die, but be suddenly translated into heaven like Enoch and Elijah. Notwithstanding she did actually die at Watervliet, on the 8th of September, 1784, her followers believe that it was not real death.

LEE, Charles. "Boiling Water" was the significant name which the Mohawk Indians gave to L., when he resided among them, and bore the honors of a chief. His character was indeed like boiling water—hot and restless. He was a native of Wales, where he was born in 1731. Love of adventure brought him to America, in 1756, as an officer in the British army, and he remained in service here during a greater part of the French and Indian war. He then returned to England; and, in 1762, he bore a colonel's commission, and served under Burgoyne, in Portugal. After that he became a violent politician, in England; and, in 1770, he crossed the channel, and rambled all over Europe, like a knight-errant, for about three years. His energy of character and military skill made him a favorite at courts, and he became an aid to Poniatowski, King of Poland. He came to America toward the close of 1773, and, at the solicitation of Colonel Horatio Gates, whom he had known in England, he was induced to buy an estate in Berkeley county, Virginia, and settle there. He resigned his commission in the British army, and became an American citizen. When the Continental army was organized, in June, 1775, L. was appointed one of the four major-generals, and accompanied Washington to Cambridge. He was active there until the British were driven from Boston, in the spring of 1776, when he marched, with a considerable force, to New York, and afterward proceeded southward to watch the movements of Sir Henry Clinton. He participated in the defence of Charleston, as commander-in-chief; and after the British were repulsed, he joined Washington at New York. After the battle at White Plains, and the withdrawal of a great portion of the American army to New Jersey, he was left in command of a force on the east side of the Hudson. While Washington was retreating toward the Delaware, at the close of autumn, L. tardily obeyed his orders to reinforce the flying army, and was made a prisoner while tarrying in the interior of New Jersey. His services were lost to the country until May, 1778, when he was exchanged for General Prescott, captured in Rhode Island, by Colonel Barton. A month afterward he was in command at Monmouth, where, during the hot contest of battle, he was sternly rebuked by Washington, for a shameful and unnecessary retreat. That rebuke on the battle-field wounded L.'s pride, and he wrote insulting letters to the commander-in-chief. For this, and for misconduct before the enemy, he was suspended from command, pursuant to a verdict of a court-martial. Congress confirmed the sentence, and he left the army in disgrace. The event made his naturally morose temper exceedingly irascible, and he lived secluded on his estate in Berkeley, for awhile. Then he went to Philadelphia, and there died in neglect, at the age of fifty-one years. L. was a brilliant man in many respects, but he lacked sound moral principles, was rough and profane in language, and neither feared nor loved God or man. In his will, he bequeathed his "soul to the Almighty, and his body to the earth;" and then expressed a desire not to be buried within a mile of any Presbyterian or Anabaptist meeting-house, giving as a reason that he had "kept so much bad company in life, that he did not wish to continue the connection when dead."

LEGARE, Hugh Swinton, was born at Dorchester, near Charleston, South Carolina, about the year 1800. He was of Huguenot descent. His father died when he was an infant, and he was left to the charge of an excellent mother. At the age of nine years he was placed in the school of Mr. King (afterward promoted to the bench in South Carolina) in Charleston, and was finally prepared for college by the excellent Reverend Mr. Waddel. He learned rapidly, and at the age of fourteen years he entered the College of South Carolina, where he was graduated with the highest honors. The profession of the law became his choice, and for three years he studied assiduously under the direction of Judge King, his early tutor. He then went to Europe, where he remained between two and three years. Soon after his return, he was elected to a seat in the South Carolina legislature. While there, some of those measures which tended toward political disunion were commenced, but L. was always found on the Federal side of the question, for he regarded the Union with the utmost reverence. In 1827, L. and other cultivated gentlemen in the South commenced the publication of the "Southern Review," a literary and political periodical, which soon acquired great influence. L. was one of the chief and most popular of the contributors. He was soon called to fill an important public station, by receiving the appointment of attorney-general of South Carolina. He performed the duties of that office with great ability, until 1832, when he was appointed minister to Belgium, by President Jackson. There he remained until early in 1837, when he returned to Charleston, and was almost immediately elected to a seat in Congress. He first appeared there at the extraordinary session called by President Van Buren to consider the financial affairs of the country. There he displayed great statesmanship and fine powers of oratory, and was regarded by friends and foes as a rising man. At the end of his congressional term, he resumed the practice of law in Charleston, and was pursuing his avocations with great energy and *eclat*, when President Harrison, in 1841, called him to his cabinet as attorney-general of the United States. He continued in that station, under President Tyler, until the summer of 1843, when, on the occasion of a visit to Boston, with the chief magistrate, in June, he was seized with illness, and died there, on the 20th of that month, at about forty-three years of age.

LILLINGTON, John Alexander, was the son of a British military officer, who was a member of the royal council of Barbadoes, in 1698. His son John, captivated by the glowing accounts given of North Carolina, emigrated thither, and scttled within the present limits of New Hanover county; and in 1734, built a fine mansion there, which he called *Lillington Hall*. L. inherited the military tastes of his father; and when the notes of preparation for the Revolution were heard all over the land, his skill was brought into requisition. He was also a member of the Wilmington committee of safety in 1775; and when the Scotch Highlanders and others in the vicinity of Cross Creek (Fayette-

ville), took up arms for the king, under Donald McDonald, in the winter of 1776, L. commanded one of the provincial corps which marched against, and defeated them, at Moore's Creek, under the general command of Colonel Caswell. It was the initial battle of the Revolution in the South, and the victory was hailed with delight. L. was made a brigadier; and from that time, until the approach of Gates, in 1780, he was active in the council and field. Both he and his son joined the army of Gates, and participated in the disgrace of defeat at Camden. L. remained in service until the close of the war, when he withdrew from public life.

LIVINGSTON, John H., was born at Poughkeepsie, Dutchess county, New York, on the 30th day of May, 1746. He received parental instruction, only, until his seventh year, when he was placed under other tutors, among whom was the father of the late Chancellor Kent. At the age of twelve years, he entered Yale College, as a student, and was graduated in 1762, when only sixteen. The profession of the law opened a brilliant future for him, and he commenced its study under Bartholomew Crannel, of Poughkeepsie. His habitual seriousness was deepened into strong religious convictions, by hearing a sermon from the lips of the eminent Whitefield, and he resolved to abandon the law, and become a minister of the gospel. He accordingly went to Holland, in 1766, to prosecute theological studies in the University of Utreeht, and there he remained until 1770, and acquired the degree of Doctor of Divinity. He returned to America the same year, and became pastor of the Dutch Reformed Church in the city of New York. When the Revolution broke out, all was confusion in New York, and L. went to reside at Kingston, in October, 1775. In 1781, he took up his abode at his father's mansion, in Poughkeepsie, and occupied the pulpit of the Dutch Church there, for about two years. When the British left New York, L. resumed his pastoral charge there, and the following year he was chosen, by the first convention, Professor of Theology. He performed his new duties, with those of his ministerial services, with great zeal, in New York and its immediate vicinity, until 1810, when, on the removal of Queens College (the theological school in which he was professor) to New Brunswick, in New Jersey, he was chosen its president. His inaugural address is a model of its kind, full of learning and the purest Christian spirit. As the college under his charge did not flourish as a *literary* institution, an effort was commenced, in 1815, to make it a Theological Seminary, exclusively. That measure was carried into effect, and from that time, until the present, it has held that character. Its name has been changed to *Rutger's College*, in honor of a distinguished citizen of New York who nobly patronized it. He died on the 28th of January, 1825, at the age of seventy-nine.

LOVELL, John. "The Master" of many of the leading men of the War for Independence, in New England, was John Lovell, a descendant of one of the first settlers in the Massachusetts colony. He was born in 1708, and was graduated at Harvard College, at the age of twenty years. He succeeded Jeremiah Gridley as assistant in the South Grammar School of Boston, and in 1738, was placed at its head, where he exercised pedagogue authority for almost forty years. He wrote several political and theological pamphlets; and in 1743, he delivered a funeral oration, on the death of Peter Faneuil, the founder of Faneuil Hall, which was published. Unlike a great proportion of his earlier pupils, Master Lovell was a Loyalist, and left Boston, with other refugees, when the British were driven from that city in March, 1776. He died in Halifax, Nova Scotia, in 1778, seventy years of age.

LYMAN, Phineas, was born in Durham, Connecticut, in the year 1716. He was one of the Berkeleyan scholars in Yale, and received his first degree in 1738. The following year he was appointed a tutor in that institution, in which avocation he was engaged for three years, at the same time he was studying the theory of law. He commenced its its practice at Suffield, in 1743, and he soon arose to the front rank at the bar of Hampshire county. He was elected a member of the Colonial Assembly, in 1750, and in 1753, was chosen to a seat in the council. At the age of thirty-nine years, he was appointed major-general of the Connecticut forces, and took the field in the spring of 1755. He concentrated between five and six thousand troops on the upper waters of the Hudson, built Fort Edward, and there awaited the arrival of his commander-in-chief, General William Johnson, who was to lead the provincials against the French on Lake Champlain. The fortress was first called Fort Lyman, in honor of the Connecticut general, but its name was changed in deference to a scion of royalty. In the severe battle with the French and Indians, near the head of Lake George, in September of that year, L. bore the most conspicuous part, and yet Johnson, jealous of his merits, withheld praise. The patriotic hero did not allow personal considerations to stand in the way of public duty, and he served with distinction during the whole war. He was the commander of the expedition which captured Havana, in 1762; and after the peace in 1763, he went to England, as agent of a company called *The Military Adventurers*—soldiers of the war—who asked for an appropriation of land for a colony in the Mississippi and Yazoo country. The same company had purchased an extensive tract of land on the Susquehannah, and L. was intrusted with the management of matters connected with that purchase. Deluded month after month by idle promises from the changing ministry, in England, he at length came back, after wasting eleven years abroad, and almost losing his mind. He returned in 1774, and at about that time, a tract of land having been granted, in the Mississippi and Yazoo country, he went thither with his eldest son. Both died in "West Florida," in 1775. A few years afterward, difficulties with the Spaniards caused the whole company of settlers, near Natchez, to fly for their safety across the country, a thousand miles, to Savannah. The history of L.'s family is a melancholy one. He died at the age of fifty-nine years, a victim of ingratitude and injustice.

MACDONOUGH, Thomas, was born in Newcastle county, Delaware, on the 23d of December, 1783. At the age of fifteen years he obtained a midshipman's warrant, and in the war with Tripoli he was distinguished for his bravery. He was one of the daring men selected by Decatur to assist him in burning the *Philadelphia* frigate, and he partook of the honors of that brilliant exploit. When war with Great Britain was proclaimed in 1812, M. held a lieutenant's commission, having received it in February, 1807. He was ordered to service on Lake Champlain, and in July, 1813, he was promoted to master-commandant. The war in Europe having been suspended early in 1814, by the abdication of Napoleon and the capture of Paris by the allied armies, the British forces in America were largely augmented. Quite a strong army, under Sir George Prevost, invaded New York from the St. Lawrence; and a fleet, under Commodore Downie, sailed up Lake Champlain to co-operate with the land forces. They were called "the flower of Wellington's army, and the cream of Nelson's marines." General Macomb was in command of a small land force, composed chiefly of local militia, and M. had a little squadron of four ships and ten galleys, with an aggregate of eighty-six guns. Such was the force which stood in the way of the sanguine invader. On the 11th of September, 1814, the British land and naval forces both approached. The conflict was short but decisive. M., by superior nautical skill and dexterity in the management of guns, soon caused the British flag to fall, when Prevost, in dismay, hastily retreated, leaving victory

with the Americans on both land and water. Congress awarded M. a gold commemorative medal, and gave him the commission of a post captain. Other substantial rewards were bestowed. The State of New York gave him one thousand acres of land; that of Vermont, two hundred acres; and the cities of New York and Albany each gave him a lot of ground. He died on the 10th of November, 1825, at about forty-two years of age.

MACON, NATHANIEL, was born in Warren county, North Carolina, in 1757. His early youth gave noble promise of excellent maturity, and it was fulfilled in ample measure. After a preparatory course of study, he entered Princeton College. The tempest of the Revolution swept over New Jersey, toward the close of 1776, and that institution was closed. Young M. returned home, his heart glowing with sentiments of patriotism, which had ripened under the genial culture of President Witherspoon, and he entered the military service with his brother, as a volunteer and private soldier. While in the army the people elected him to a seat in the House of Commons of his native State. Then, as ever afterward, he was unambitious of office as well as of money, and it was with great difficulty that he was persuaded to leave his companions-in-arms, and become a legislator. He yielded, and then commenced his long and brilliant public career. He served as a State legislator for several years, when, in 1791, he was chosed to represent his district in the Federal Congress. In that body he took a high position at once; and so acceptable were his services to his constituents, that he was regularly re-elected to the same office until 1815, when, without his knowledge, the legislature of North Carolina gave him a seat in the Senate of the United States. During five years of his service in the House of Representatives [1801–1806], he was speaker of that body. He continued in the Senate until 1828, when, in his seventy-first year, he resigned, and retired to private life. At that time he was a trustee of the University of North Carolina, and justice of the peace for Warren county. These offices he also resigned, and sought repose upon his plantation. M. was called from his retirement, in 1835, to assist in revising the Constitution of North Carolnia. He was chosen president of the convention assembled for that purpose; and the instrument then framed bears the marked impress of his genius and thoroughly democratic sentiments. The following year he was chosen a presidential elector, gave his vote in the Electoral College for Martin Van Buren, and then left the theatre of public life, forever. He died on the 29th of June, 1837, eighty years of age. M. was a member of Congress thirty-seven consecutive years; a longer term of service than was ever given by one man. He was appropriotely styled the Father of the House, and men of all creeds looked up to him as a Patriarch for counsel and guidance.

MADISON, JAMES, D.D., the first Bishop of the Protestant Episcopal Church in Virginia, was a native of Rockingham county in that State, and for many years president of William and Mary College. He was born near Port Republic, on the 27th of August, 1749. His early education was acquired at an acadamy in Maryland; and, in 1768, he entered William and Mary College, as a student. He was graduated in 1772, and in addition to other collegiate honors, he received the gold medal assigned by Lord Botetourt as a prize for the encouragement of classical literature. On leaving the college, young M. commenced the study of law under the afterward celebrated Chancellor Wythe, and was admitted to the bar, but he felt called to the gospel ministry, and prepared himself for its duties. He visited England, and received priest's orders; and on his return, in 1773, he was chosen Professor of Mathematics in William and Mary College. When only twenty-eight years of age (1777), he was chosen president of that institution, and then again visited England to become better instructed in those acquirements which his station demanded. He returned in 1778, and then "commenced that long career of usefulness, which entitles him to be considered as one of the greatest benefactors of Virginia." In 1784, he resigned his Professorship of Mathematics, and became Professor of Natural and Moral Philosophy, and International Law. These and the presidency he retained until his death. Until 1776, the Church of England had been the established religion in Virginia. That year the Virginia Assembly repealed all laws requiring conformity thereto. There had never been a resident Bishop in Virginia. At a convention held in Richmond, in 1785, presided over by M., the subject of a resident Bishop was considered; and the following year Rev. Dr. Griffith was requested to proceed to England, with White and Provost, and receive consecration. Circumstances prevented his going; and, in 1790, M. was elected to fill the episcopate. He was consecrated at Lambeth, in September of that year. M. made his first episcopal visitation in 1792. He died on the 6th of March, 1812, at about sixty-two years of age.

MANLY, JOHN, received his commission from Washington, at Cambridge, on the 24th of October, 1775, and was put in command of the schooner *Lee*, with instructions to cruise in Massachusetts Bay. He made a great many captures, and his services became the theme of eulogium throughout the whole country. Among his prizes was an ordnance brig, which contained heavy guns, mortars, and intrenching tools of great value to the army then besieging the British, in Boston. When Congress organized a navy, the services of M. were appreciated, and he was raised to the command of the *Hancock*, thirty-two guns. He cruised with success, but on the desertion of a colleague, while engaged with the *Rainbow* (afterward the flag-ship of Admiral Collier, in the autumn of 1777, when on our coast with a small fleet), he was made a prisoner, on the 8th of July, 1777. M. suffered a long and rigorous confinement in the *Rainbow*, and at Halifax, and his services were lost to the country for almost the entire remainder of the war. He was released in 1782, and the frigate *Hague* was placed under his command. While cruising in the West Indies, he was chased by a British seventy-four, and driven on a sand bank. Three other ships of the line attacked him, but after sustaining their heavy fire for four days, he got his vessel off, hoisted the continental flag, fired thirteen guns as a parting salute, and escaped. He died in Boston on the 12th of February, 1793, at the age of fifty-nine, and was buried with military honors.

MARTIN, FRANCOIS XAVIER, one of the most learned jurists and erudite scholars that ever adorned the profession of the law, in this country, and the accomplished historian of North Carolina, was born at Marseilles, in France, on the 17th of March, 1762. At the age of twenty years he came to America. The war of the Revolution was then just drawing to a close, and he took up his residence at Newbern, in North Carolina, and prepared himself for the profession of the law. On his first appearance at the bar, he gave evidence of that acuteness which marked his whole career, in whatever station in life he was called to act. His practice became extensive and lucrative, and he soon took a high social position in his adopted State. In 1806, he was called to represent Newbern district in the House of Commons of North Carolina. Soon after the close of his duties therein, President Madison (in 1809) appointed him United States Judge of the Mississippi Territory, and he made his residence at Natchez. On the 1st of February, 1815, he was elevated by Governor Claiborne to the bench of the Supreme Court of Louisiana, as one of the associate judges. He held that office for twenty-two years, when, in January, 1837, he became chief justice of the State, on the death of Judge Mathews. M. remained at the head of the Supreme

Court of Louisiana until the adoption of the present constitution of that State, in the autumn of 1845, when he retired to private life. He was then in the eighty-fourth year of his age. He died on the 10th of December, 1846. No man ever left an official station with fewer stains of sins of omission or commission upon his garment, than M., for through his long life not a syllable of disparagement of his honesty and integrity was ever uttered.

MASON, JOHN, was born in England about the year 1600. He was a soldier by profession, and had practiced his murderous art in that cock-pit of Europe, the Netherlands. In 1630, he came to America, and was one of the original settlers at Dorchester. He went to the Connecticut Valley in 1635, and assisted in founding a settlement at Windsor. The peace of the little colony was soon disturbed by the depredations of the powerful Pequods, whose chief rendezvous was between the Thames and Mystic rivers. They believed the white people to be friendly to their enemies, the Mohegans and Narragansetts, and they had resolved to exterminate them. They kidnapped children, stole cattle, and finally made murderous attacks upon the outskirts of the settlement at Saybrook, near the mouth of the Connecticut river. The danger became imminent, and M. went down to Saybrook, with some followers, to reinforce and command the garrison of the little fort there. In the spring of 1637, the settlers in the Connecticut Valley declared war against the Pequods, and the Plymouth and Massachusetts people promised to assist them. Through the influence of Roger Williams, the Narragansetts became allies of the English; and when, late in May, M., with eighty white men and seventy Mohegan Indians, anchored his pinnaces near Conannicut Island, he was joined by Miontonomoh, the great chief of the Narragansetts, with two hundred warriors. With these, M. proceeded toward the Pequod country, and was joined, on the way, by the Niantics. Sassacus, a fierce warrior, was the chief sachem of the Pequods. He could summon two thousand braves to the field, and his confidence in his great strength made him less vigilant than a weak leader would have been. He had no intelligence or suspicion of the approach of M. from the East. He was first informed of it by the seven survivors of a dreadful massacre. The invaders crept as stealthily along as a panther, and just at dawn, on the 5th of June, 1637, fell upon the chief fort of the Pequods, on the Mystic river. Before sunrise, more than six hundred men, women, and children, had perished by weapons, or by the flames of their own burning wigwams. Only seven escaped to arouse the nation to vengeance. The English, aware of their danger, hastened toward Saybrook; but the power of the Pequods was broken. When, a few days afterward, about one hundred Massachusetts men joined M., Sassacus and his followers fled westward, hotly pursued by the English. They took shelter in Sasco swamp, near Fairfield, where, after a severe battle, they all surrendered, except Sassacus and a few others, who fled to the Mohawks for refuge. There the great sachem was treacherously slain. The blow was terrible. A nation had disappeared in a day. Soon after the war, the governor of Connecticut appointed M. major-general of all the forces of the colony, which office he filled until his death. He was also a civil magistrate for eighteen consecutive years; and in 1660, he was elected deputy-governor. He retired from public life in 1670; and in 1673, he died at Norwich, seventy-two years of age.

M'INTOSH, LACHLIN, "the handsomest man in Georgia," at the commencement of the Revolution, was born near Inverness, in 1727, and was a son of the head of the Borlam branch of the clan M'Intosh, who, when Lachlin was nine years of age, came to America with General Oglethorpe. He accompanied that gentleman in an expedition against the Spaniards, in Florida, was made prisoner and sent to St. Augustine, where he died; and Lachlin, at the age of thirteen years, was left to the care of an excellent mother. The newly-settled province afforded small means for acquiring an education, and Mrs. M'Intosh was unable to send her son to Scotland, for the purpose. His naturally strong mind, excited by a love for knowledge, overcame, as usual, all difficulties. Just as he approached manhood, he went to Charleston, where his fine personal appearance, and the remembrance of his father's military services in Georgia, procured him many warm friends. Among these was the noble John Laurens, and he entered that gentleman's counting-room as under clerk. Disliking the inaction of commercial life within doors, he left the business, returned to his paternal estate and the bosom of his family, on the Alatamaha, and commenced the business of a land-surveyor. Success attended his efforts; and, inheriting the military taste of his father, he made himself familiar with military tactics, and thus was prepared for the part he was called upon to act in the War for Independence. He was a leading patriot in his section of Georgia; and when the war broke out, he entered the army, received the commission of colonel, and was exceedingly active in the early military movements in that extreme Southern State. He was commissioned a brigadier, in 1776, and a rivalry between himself and Button Gwinnett, one of the signers of the Declaration of Independence, resulted in a fierce quarrel, which ended in a duel. The challenge was given by Gwinnett. Both were wounded; Gwinnett mortally. M. was tried for murder, and acquitted; but the trouble did not end there. The feud spread among the respective friends of the parties, and, at one time, threatened serious consequences to the Republican cause at the South. To allay the bitter feeling, M. patriotically consented to accept a station at the North, and Washington appointed him commander-in-chief in the Western department, with his head-quarters at Pittsburg. Early in 1778, M. descended the Ohio with a considerable force, erected a fort thirty miles below Pittsburg, and after considerable delay, he marched toward the Sandusky towns in the interior of Ohio, to chastise the hostile Indians. The expedition accomplished but little, except the building of another fort near the present village of Bolivia, which M. named Laurens, in honor of his old employer, then president of Congress. He returned to Georgia, in 1779, and was second in command to Lincoln at the siege of Savannah, in October of that year. He remained with Lincoln during the following winter and spring, and was made a prisoner, with the rest of the Southern army, on the surrender of Charleston, in May, 1780. After his release, he went, with his family, to Virginia, where he remained until the close of the war. Then he returned to Georgia, a poor man, for his little estate was almost wasted. He lived in retirement and comparative poverty, in Savannah, until 1806, when he died, at the age of seventy-nine.

M'KEAN, THOMAS, was born in Chester county, Penn., on the 19th of March, 1734. He studied law with his relative, David Finney, at New Castle, in Delaware; and during his student life, he was clerk of the prothonotary Court of Common Pleas, for that county. He was admitted to practice before he was twenty-one years of age, and his upward course in his profession was rapid and highly honorable. In 1756, he was appointed deputy of the attorney-general, to prosecute in the county of Sussex, and the following year he was admitted to the bar of the Supreme Court of Pennsylvania. He was appointed clerk of the assembly of Delaware, at about the same time; and that body, in 1762, appointed him a colleague, with Cæsar Rodney, to revise and print the laws of the province enacted during the preceding ten years. That same year he was chosen a member of the Delaware Assembly, and then he commenced his distinguished political career in earnest, which continued for about half a century. He was annually re-elected to the Assembly for

seventeen years, against his continually expressed desire to leave public life, and even while, for six years of the time, he was a resident of the city of Philadelphia. In 1764, the legislature appointed him one of three trustees of the provincial loan office, and he performed the duties of that station until 1772. He was a delegate to the "Stamp Act Congress" held in New York, in 1765, and was one of the most energetic friends of popular liberty in that assembly. In 1771, he was appointed collector of the customs at New Castle, and was a commissioner of the revenue. In the autumn of 1772, he was chosen Speaker of the Assembly. He was a delegate for his adopted province in the first Continental Congress, in 1774; and he was a member of the national council from that time until the return of peace, in 1783. He advocated independence, and signed the great Declaration. He was one of the committee appointed to draw up the Articles of Confederation; and while acting as a senator in Congress, and president of the newly-organized State of Delaware, he was also distinguished as a soldier, in New Jersey, with the commission of colonel. In July, 1777, he was commissioned chief justice of Pennsylvania, and held that exalted office for twenty years. He was president of Congress, in 1781; and, in 1787, he was a member of the Pennsylvania convention which ratified the Federal Constitution. He was its earnest advocate, and was extremely influential in procuring its ratification, by Pennsylvania. In 1789, M. assisted in amending the constitution of his native State; and ten years afterward, at the end of a warm party contest, he was elected governor of Pennsylvania. For nine years he governed Pennsylvania with firmness, ability, and great discretion, and then retired from public life. Only once again did he appear in a popular assembly. It was in Independence Hall, in 1814, when the safety of Philadelphia seemed in jeopardy from the British. He presided, and reminded the people that there were then only two parties, "our country and its invaders." The venerable patriot died on the 24th of June, 1817, when past the eighty-third year of his age.

MEIGS, Return Jonathan, was born at Middletown, Connecticut, in December, 1740. He received a good common education, and learned the trade of a hatter. Of his earlier life we have no important information; and he first appears in public at the opening of the Revolution. He was then thirty-five years of age; and one of the companies of minute-men, in his native town had chosen him their captain. When intelligence of bloodshed at Lexington reached him, he marched his company to Cambridge, and soon received the appointment of major from Governor Trumbull. In the ensuing autumn, he accompanied Arnold in the memorable expedition from the Kennebec to the St. Lawrence. He participated in the attack on Quebec, at the close of the year, and was made a prisoner there. His fellow-captives were much indebted to him for comforts during the remainder of the dreary winter. In the course of the following year he was exchanged, and, receiving the commission of colonel from the Continental Congress, he raised a regiment in Connecticut, which was known as The Leather-cap Battalion. With a part of his force (seventy in number), he made a bold attack upon the British post at Sag Harbor, east end of Long Island, in May, 1777, where he destroyed a great deal of property, and carried off almost a hundred prisoners, without losing a man. Congress gave him thanks and a sword for that exploit. In the capture of Stony Point, on the Hudson, in 1779, M. and his regiment, under the direction of General Wayne, performed a gallant part. He was one of the first to mount the parapet and enter the fort. He remained in active service until the close of the war, and then sat down quietly in his native town, to enjoy the honors he had so bravely won. His knowledge of surveying, acquired in early life, was now called into practice. He was appointed one of the surveyors of the Ohio Land Company, and in the spring of 1778, he went over the mountains, and halted at Marietta, the head-quarters of emigrants to that region. In 1798, M. was elected a member of the Territorial legislature; and, in 1801, President Jefferson appointed him Indian agent, among the Cherokees, where he resided until his death, which occurred at the Cherokee agency, on the 28th of January, 1823, at the age of eighty-three. The Indians with whom he lived so long, loved and revered him as a father.

MERCER, Hugh. On the first day of December, 1853, Colonel Hugh Mercer, the foster-child of the Republic, died at Fredericksburg, Virginia, at the age of little more than seventy-seven years. He was a son of the brave General Hugh Mercer, who was mortally wounded in the battle at Princeton, on the morning of the 3d of January, 1777, and who is revered as one of the eminent martyrs of liberty, who fought for American Independence. That brave soldier was a native of Scotland, and was a surgeon on the bloody field of Culloden, in 1745. Ten years later he was the companion-in-arms of Washington, in the sanguinary conflict on the Monongahela, where Braddock was killed; and when another ten years had elapsed, he left his apothecary shop, his medical practice, and his beloved family, and drew his sword for the liberties of his adopted country. Sixty-three days after he had fallen on the battlefield, the Continental Congress resolved to erect a monument to his memory, in Fredericksburg, with a suitable inscription; and also resolved, "That the eldest son of General Warren, and the youngest son of General Mercer, be educated, from this time, at the expense of the United States." That "youngest son of General Mercer" was the subject of this brief memoir. He was born at Fredericksburg, Virginia, in July, 1776. He was educated at William and Mary College, during its palmiest days, while under the charge of the good Bishop Madison. For a long series of years he was colonel of the militia of his native county (Spottsylvania), and for twenty years he was an active magistrate. For five consecutive years he represented his district in the Virginia legislature, when, preferring the sweets of domestic life, to the turmoils of politics and public office, he declined a re-election. He was soon afterward chosen president of the branch bank of Virginia, located at Fredericksburg, and held that situation until his death.

MILLER, William, the author of *Millerism*, familiarly known, like the founder of Mormonism, as *The Prophet*, was a plain, uneducated, religious zealot, who was born in Pittsfield, Massachusetts, in 1771. Of his early life we have no important record. He seems not to have been distinguished from his fellow-men by anything remarkable, except that he was an honest man and good citizen. When war between the United States and Great Britain was kindled in 1812, M. was captain of a company of volunteers on the northern frontier, and did good service at Sacketts Harbor, Williamsburg and Plattsburg. When peace came he resumed his farm labors, and we hear nothing more of him until about 1826, when, almost simultaneously with Joe Smith's annunciation of his pretended visions, M. began to promulgate his peculiar views concerning prophesy. It was not until 1833, that he commenced his public ministry on the subject of the approaching Millenium. Then he went forth from place to place throughout the Northern and Middle States, boldly proclaiming the new interpretation of Scripture, and declaring that Christ would descend in clouds, the true saints would be caught up into the air, and the earth would be purified by fire, in 1843. No doubt the aged zealot was sincere. He labored with great fervor; and during the ten years of his ministry he averaged a sermon every two days. As the time for the predicted consummation of all prophesy approached, his disciples rapidly increased. Hundreds and thousands embraced his doctrine, withdrew

from church-fellowship, and banded together as *The Church of Latter Day Saints.* Other preachers appeared in the field. The press was diligently employed; and an alarming paper, called *The Midnight Cry,* was published in New York, embellished, sometimes, with pictures of hideous beasts, and the image seen by the Babylonian Emperor in his dream; at others with representations of benignant angels. The office of that publication was the head-quarters of the deluded sect, and the receptacle of a large amount of money continually and bountifully contributed by the disciples, even up to the very evening before "the last day," in the autumn of 1843. The excitement became intense. Many gave up business weeks before. Some gave away their property to the managers of the solemn drama. Families were beggared, and scores of weak men and women were made insane by exeitement, and became inmates of mad houses. The appointed day passed by. In the course of a few weeks the exeitement subsided, and soon the rushing torrent of delusion dwindled into an almost imperceptible rill. M. acknowledged his error, and seldom preached about the Millennium. He died at Hampton, Washington County, New York, on the 29th of Deeember, 1849, seventy-eight years of age.

MILNOR, James, was the son of Quaker parents, and was born in Philadelphia on the 20th of June, 1773. He was educated partly in the Philadelphia Academy, and partly in the University of Pennsylvania. To relieve his father of heavy expenses on his account, James left the University before taking his degree, and at the age of about sixteen years, commenced the study of law. He was admitted to the bar in 1794, before he was quite twenty-one years of age, and commeneed practice in Norristown. There, among a preponderating German population, he was very successful, he having acquired a knowledge of the language at an early age. After remaining there three years, he returned to Philadelphia, and, in 1799, married. That ceremony having been performed by "a hireling priest" (the bride was an Episcopalian, by education), eontrary to the discipline of Friends, M. was disowned, and his membership in the Society eeased forever. In the year 1800, he was chosen a member of the city eouneil. He held the same position from 1805 until 1809; and during the latter year, he was its President. He was extremely popular among all classes; and in 1810, he was elected to a seat in Congress by the Federal vote in his district. There he remained until the spring of 1813, and was a steady and consistent opponent of the war, and the belligerent measures of the Administration. He took a prominent part in the debates; and on aceount of a report of one of his speeches, which appeared in a Philadelphia paper, Henry Clay, then Speaker of the House, challenged him to fight a duel. M. bravely refused, first because Mr. Clay had no right to call him to account for his public acts, and secondly because he was opposed, in principle, to the cowardly practice of duelling. There the matter ended, and in after years, when he was an eminent minister of the Gospel, he and the great statesman met on the most friendly terms. When his term of service in the national council had ended, he abandonded the legal profession and prepared for entrance upon the Gospel ministry. He was admitted to the communion by Bishop White, and was ordained a deacon by that excellent prelate, in August, 1814. Twelve months afterward he was ordained a presbyter, and labored for about a year as an assistant minister in the Associated Churches, in Philadelphia. In 1816, he was ealled to the rectorship of St. George's Church, in New York, and eommenced his long and useful labors there in September of that year. He was extremely active in the promotion of schemes of Christian benevolence. He was one of the founders of the American Tract Society, in 1824, and continued to be one of its most active members until his death. The Institution for the Deaf and Dumb; the Orphan Asylum; the Home for aged indigent Females, and many kindred institutions, felt his fostering care. He died on the 8th of April, 1845, in the seventy-second year of his age.

MITCHILL, Samuel L., was a native of North Hempstead, Queen's county, Long Island, where he was born of Quaker parents, on the 20th of August, 1764. He was educated by private tutors, supplied chiefly by his maternal uncle, Dr. Samuel Latham. Young M. ehose the medieal profession as a life-pursuit, and eommenced study with his unele. In 1780, he was placed under the instructions of Dr. Samuel Bard, and after a little more than three years, he went to Edinburgh, in Scotland, then the seat of science, in Great Britain. There he had Thomas Addis Emmet and Sir James M'Intosh for his elass-mates and friends; and when he left the institution, he bore its highest honors. The fame of his aequirements preceded him, and when he returned home he was received into the first intellectual circles of New York. The Faculty of Columbia College gave him the degree of Master of Arts. For awhile he turned his attention to constitutional law, with the intention of engaging in legislative duties. In 1788, he was one of the commissioners who treated with the heads of the Six Nations, at Fort Stanwix (now Rome), and obtained from them the cession of Western New York. In the meanwhile he practiced his profession, and was indefatigable in his study of the natural scienees. In 1790, he was elected to a seat in the New York Legislative Assembly; and, in 1792, he was chosen Professor of Chemistry, Natural Sciences, and Agriculture, in Columbia College. He was then considered the best naturalist and practieal chemist, in America. In 1796, he made his famous report of a mineralogical survey of the State of New York; and the following year he commenced the publication of the *Medical Repository,* of whieh he was chief editor for sixteen years. He was the founder (and a long time president) of the Lyceum of Natural History, of New York; and he took a great interest in the New York Historieal Society, and kindred institutions. For about twenty years, M. aeted as one of the physieians of the New York Hospital. Notwithstanding his immense labors in the field of seientific research, and his voluminous publications upon almost every variety of subjects, he found time to mingle in political strife, and share in the labors and honors of offieial station. He represented the city of New York, in Congress, six consecutive years, and was afterward United States Senator. He was possessed of vast and varied knowledge; and yet, because he sometimes advanced opinions of which the world had not yet dreamed, he was sneered at by the sciolist, and ridiculed by shallow upstarts in scienee. He was thoroughly appreciated in Europe, where almost every literary and scientific institution thought it an honor to enrol his name upon its list of members. He died on the 7th of September, 1831, in the sixty-seventh year of his age.

MONTGOMERY, Richard. In September, 1759, the accomplished General Wolfe perished in the arms of victory on the plains of Abraham, at Quebec, at the early age of thirty-two years. Near him, when he fell, was a handsome young soldier, ten years his junior, who, a little more than sixteen years later, was the commanding general in a siege of the same city, and also perished in the midst of his troops. That young soldier was Richard Montgomery, who was born in the north of Ireland, in 1736, and entered the British army at the age of twenty years. After the conquest of Canada, he was in the campaign against Havana, under General Lyman; and at the peace in 1763, he took up his residence in New York. He finally left his regiment, returned to England, and made unsuccessful attempts to purchase a majority. He sold his eommission in 1772, came to America, and purchased a beautiful estate on the Hudson, in Dutehess county, New York. He soon afterward married a daughter of Robert Livingston. It was a happy union,

but those dreams of long years of domestic peace were soon disturbed by the gathering tempest of the Revolution. M., with all the ardor of the people of his birth-land, espoused the patriot cause, joined the army under General Schuyler, destined for the invasion of Canada, and was second in command, in the autumn of 1775, bearing the commission of a brigadier. Illness of the chief devolved the whole duty of leadership upon M., and he went on successfully until St. John, Chambly, and Montreal were in his power. Congress gave him the commission of major-general, and amid the snows of December, he pressed forward to join Arnold in an assault upon Quebec. For three weeks he besieged that city; and early on the morning of the 31st of December, while snow was fast falling, an attempt was made to take the town by storm. M. was killed while leading a division along the shores of the St. Lawrence, beneath the precipitous Cape Diamond. Arnold was also wounded at another point of attack, and the great object of the expedition failed. For forty years the remains of M. rested within the walls of Quebec. At the request of his widow, in 1818, they were disinterred, conveyed to New York, and placed beneath a mural monument, erected by order of Congress, on the external wall of the front of St. Paul's church, in that city. Millions of people, passing along Broadway, have looked upon that monument, the memorial of one whose praises were spoken in Parliament by the great Chatham and Burke, and of whom Lord North said, "Curse on his virtues; they have undone his country." He was in the fortieth year of his age when he fell.

MORGAN, Daniel, was of Welsh descent, and was born in Pennsylvania, in the year 1736. His family were in humble circumstances, and his education was only such as could be acquired at an ordinary country school, at that time. At the age of seventeen he wandered into Virginia, and there became a wagoner for one of the wealthy planters in Frederick county. He owned a team when Braddock marched to the fatal field of the Monongahela, and he accompanied that expedition as a bearer of supplies. For alleged insult to a British officer, he received five hundred lashes almost without flinching. A few days afterward the officer became convinced of the injustice of the charge, and apologized to young M. in the presence of the whole regiment. In 1756, M. was commissioned an ensign in the provincial army, because of his military skill and service in the former campaign, and then he first became acquainted with Washington. From that time until the Revolution commenced, he was much in service against the Indians; and tradition tells a hundred tales of his great daring. In 1774, he owned a fine farm in Frederick county, and that year he was in Dunmore's expedition beyond the Alleghanies. In May, 1775, Congress appointed him a captain, and in less than a week thereafter, ninety-six men—the nucleus of his celebrated rifle corps—were enrolled under his banner, and were on their way to Boston. He led the van of Arnold's wonderful expediton from the Kennebeek to the St. Lawrence, in the autumn of 1775; and in the siege of Quebec, he led the forlorn hope of Arnold's division. When Arnold was wounded there, M. took eommand, fought desperately, and was made prisoner. When exchanged, he was eommissioned a colonel in the Continental army, and from that time Washington considered M.'s rifle corps the right arm of his forces. He was the chief instrument in the capture of Burgoyne, in the autumn of 1777. He received the commission of brigadier, and was one of the most active officers in the Southern campaigns. His military glory eulminated when, on the 17th of January, 1781, he defeated the British, under Tarleton, at the Cowpens, west of the Broad river, in South Carolina. For that achievement Congress awarded him the thanks of the nation, and a gold medal. In consequenee of the infirm state of his health, he then left the service, and retired to his farm, where he devoted himself to agricultural pursuits. Washington desired him to be placed at the head of the expedition against the Western Indians, in 1791, but St. Clair was chosen. In 1794, he commanded the troops in Western Pennsylvania, designed to secure the power over the whiskey insurgents, obtained by General Lee. He was elected to Congress the same year, where he served two sessions. He removed to Winchester, Virginia, in the year 1800, where he expired, on the 6th of July, 1802, in the sixty-sixth year of his age.

MOTTE, Rebecca, was the youngest daughter of Robert Brewton, who emigrated to America in 1733. He made Charleston his residence, and there Rebecca was born on the 28th of June, 1738. At the age of twenty, she married Jacob Motte, a descendant of one of the Huguenot families of South Carolina. He owned a fine plantation near the banks of the Congaree, and there M., the mother of six children, and a widow, resided during the War for Independenee. After the fall of Charleston, in 1780, the British commander sought to hold military possession of South Carolina, by establishing fortified camps in the interior. The fine mansion of M. was taken possession of, fortified for the purpose, and named Fort Motte. The garrison was commanded by Major McPherson, in May, 1781, when Marion and Lee appeared and commenced a siege. M. had been driven from her mansion by the British, and had taken up her abode in her farm-house, whither her mother (who resided with her) had carried a beautiful bow and bundle of arrows, presented to her son by an East India captain. Having but one cannon, the Americans could make but little impression on the British works. Lee's fertile mind conceived the idea of dislodging the enemy by burning the mansion, that aet to be effected by hurling ignited combustibles upon the dry roof, by means of arrows. He suggested the plan to M. She heartily approved of it, notwithstanding it involved the destruction of her property; and she presented Lee with the East India bow and arrows, for the service. The hoped-for result was aceomplished; and after the British had surrendered, M. regaled the officers of both armies with a sumptuous dinner. One of her daughters married General Thomas Pinckney, one of the most valuable officers of the South. M. lived, greatly beloved by all, until the year 1815, when she died, at the age of seventy-seven years.

MUHLENBERG, Peter, was a native of Trappe, a village in Montgomery county, Pennsylvania, where he was born on the 1st of October, 1746. He was the son of Dr. Melchoir Muhlenberg (the founder of the Lutheran Church in America), and the daughter of Conrad Weiser, the great Pennsylvania Indian agent. Peter was educated for the ministry, partly in this eountry, and partly in Europe. He was ordained in 1768, and commenced his pastoral labors in Western New Jersey the following year. He was called to the eharge of a congregation in Virginia, in 1771, and it being necessary to obtain ordination from an English Bishop, before he could enter upon his duties there, he went to London for the purpose, at the beginning of the following year. He and Mr. (afterward Bishop) White were ordained at the same time. On his return, he became minister of the parish of Woodstoek, Virginia, and was soon an aeknowledged leading spirit of that seetion among those who opposed British aggressions. He was chairman of the eommittee of safety in that county, in 1774, and was elected to a seat in the House of Burgesses. At the close of 1775, he was appointed colonel of a Virginia regiment, and, relinquishing his pastoral duties, he joined the army, and was in the battle at Charleston, in June, 1776. Congress eommissioned him a brigadier, in February, 1777, and he was ordered to take charge of all the Viginia Continental troops. He joined the army, under Washington, at Middlebrook, in May, and was with the chief in all his movements from that time until 1779—

Brandywine, Germantown, White Marsh, Valley Forge, and Monmouth. He was with Wayne at the capture of Stony Point, in July, 1779, and was very active afterward, in Virginia, until the capture of Cornwallis, in the autumn of 1781. He was a brave participator in that last great battle of the Revolution. At the close of the war he was promoted to major-general, and removed to Pennsylvania. He never resumed his ministerial labors, but served his native State in several civil offices. He was a member of the first and third Congress, after the organization of the Federal Government, and was also a United States Senator in 1801. He was appointed supervisor of the revenue of Pennsylvania in the same year; and, in 1802, he was made collector of the port of Philadelphia. In that office he remained until his death, which occurred at his country-seat, near Philadelphia, on the 1st of October, 1807, when he was precisely sixty-one years of age.

NELSON, Thomas, Jr., was born at Yorktown, Virginia, on the 26th of December, 1738. According to the common practice among the wealthy, in Virginia, at that time, he was sent to England to be educated, where he remained until 1761, when he returned home. He first appeared in public life in 1774, when he was elected a member of the House of Burgesses, of Virginia, and he was one of eighty-nine members of that assembly who, when dissolved by the royal governor (Dunmore), met at the Raleigh tavern, organized, and appointed delegates to the first Continental Congress. He was a member of a provincial convention held in the spring of 1775, in which Patrick Henry uttered those sublime words, "Give me liberty or give me death!" and was one of the boldest patriots therein. He was elected to a seat in the Continental Congress, in 1775, and the following year he signed the Declaration of Independence. In 1777, severe and protracted illness compelled him to resign his seat and return home. By activity in military life, for awhile, N.'s health was improved, and he was again elected a delegate to Congress, in 1779. But ill health compelled him to resign in April following. When British depredators by land and sea menaced that portion of the country, N., at the head of the militia of Lower Virginia, was active in its defence. In 1781, he succeeded Jefferson, as governor of the State; and in both civil and military capacities, he was exceedingly active and efficient. He even pledged his private fortune as security for the State, in order to raise funds to keep the militia in the field; and the combined French and American armies found him a powerful auxiliary in the siege of Yorktown, in the autumn of 1781. During that siege, his own fine mansion, situated within the enemy's lines, was occupied by British officers. He observed that in the storm of balls which the besiegers were pouring upon the town and the British works, his own house was spared. He begged the cannoniers not to regard his property with favor, and actually directed a piece himself, so that the balls would fall upon his mansion. It had the effect to drive the officers from that strong retreat, and no doubt hastened the surrender of Cornwallis. The remainder of his days were spent in quiet, alternately at his mansion in Yorktown, and upon his estate at Offley. He died at the former place on the 4th of January, 1789, in the fifty-third year of his age.

OTIS, Harrison Gray, was a son of Samuel A. Otis, who, for about twenty-five years, was clerk of the Senate of the United States. Harrison was born in 1765. He was graduated at Harvard University, at the age of eighteen years. He had been a successful student, and he then entered upon the study of law with a preparation possessed by few young men. Before he was twenty-one years of age he had commenced his successful career as a practitioner. He soon stood foremost at the bar with such men as Parsons, Lowell, Gore, Cushing, Paine, Ames, Cabot, and other distinguished lawyers of New England, and was excelled by none of them in acuteness as an attorney, and in impressive and graceful oratory as an advocate. In 1797, O. represented the Suffolk (Boston) district in the Federal Congress, as the successor of Fisher Ames; and he held that station until 1801, when the Republicans came into power under the leadership of Mr. Jefferson. For many years he was a member, alternately, of both branches of the Massachusetts legislature, and, at different times, he was the presiding officer of both Houses. O. was chosen United States Senator, in 1817, and his course in that body during the exciting scenes preceding the admission of Missouri into the Union as a sovereign State, won for him the highest applause of his constituents. After five years service there he retired. He was nominated for governor, in 1823, but was defeated. After filling several local offices (judge of the Court of Common Pleas, mayor of Boston, and others of less note), O. withdrew from public life, in the full enjoyment of his intellectual vigor. He died in the city of Boston, on the 28th of October, 1848, at the age of about eighty-three.

PAINE, Robert Treat, was born at Taunton, Massachusetts, on the 9th of December, 1773, and was the second son of Robert Treat Paine, one of the signers of the Declaration of Independence. He was named Thomas, but on the death of his eldest and unmarried brother, Robert Treat, in 1798, he assumed his name, and had his choice legally confirmed by an act of the legislature, in 1801. P. was educated at Harvard, where his poetic genius was early developed. He was intended for the profession of the law, but soon after leaving college he became a merchant's clerk. He was quite irregular in his habits, and became greatly enamored of the theatre. He obtained a medal for a prologue, spoken at the opening of the new theatre in Boston, in 1793; and the following year he assumed the editorial control of a newspaper called the *Federal Orerry*. It was an unsuccessful enterprise, for the editor was idle, and it expired for want of proper food, in 1796. Paine had married the beautiful daughter of an actor, the year before, which offended his father, and an alienation ensued. In 1795, P. delivered a poem at Cambridge, entitled *Invention of Letters*, for which he received from the book-seller $1500. Two years afterward, his *Ruling Passion* brought him $1200; and his *Adams and Liberty*, written in 1798, at the request of the Massachusetts Charitable Fire Society, yielded him $750, or more than $11 a line. P. was appointed master of ceremonies at the theatre, with a salary, and that connection threatened his health and reputation with shipwreck. A happy change soon occurred. He abandoned dissipation, and, on the solicitation of friends, he left the theatre, moved, with his family, to Newburyport, entered the law-office of Judge Parsons, became a practioner, enjoyed reconciliation with his father, and gave his friends great hopes. In 1803, when fortune and bright character were within his grasp, he was again allured to the theatre, its associations and his habits, and he fell to rise no more. He neglected business, became intemperate, and died in wretchedness, on the 14th of November, 1811, when in the thirty-eighth year of his age.

PATTERSON, Robert M., was born in Philadelphia, in 1787, was educated at the University of Pennsylvania, and at an early age was graduated there, as a physician. He pursued medical studies in Europe, for several years, and returned to his native city in 1812, with the intention of engaging in his profession there. Being immediately appointed Professor of Natural Philosophy in the medical department of the University, and soon afterward of Mathematics and Natural Philosophy in the classical department, he was diverted from practice. At the age of twenty-seven years he was elected Vice-Provost of that institution. Having paid much attention to the science of engineering, he was invited by the Committee of Safety of Baltimore, in

1813, to lay out and superintend the construction of fortifications there, the city being menaced by the British. He performed the duty so satisfactorily, that he won a public vote of thanks. For fourteen years P. remained a professor in the University, and was always distinguished for extensive and varied scientific attainments. In 1828, he accepted an invitation to occupy the chair of Natural Philosophy in the University of Virginia. After seven years' service there, President Jackson appointed him Director of the United States Mint. He held that responsible station during several administrations, until 1851, when rapidly declining health compelled him to resign. He died at Philadelphia, on the 5th of September, 1854, sixty-seven years of age.

PEALE, Charles Wilson, was born at Charlestown, Maryland, in 1741, and in Annapolis he successively learned the trades of saddler, watch-maker, silver-smith, and carver. He studied art and practiced his mechanical trade, until an opportunity offered for him to go to England and place himself under the tutorship of the great West. He remained with that famous artist during the years 1770, and 1771, when he returned to America, and practiced his art, as a portrait-painter, without a rival for fifteen years. When the Revolution broke out, he joined the army, and was at the head of a company in the battles at Trenton, Brandywine, Germantown, and Monmouth. While at Valley Forge, in the Winter of 1777–'8, he conceived the grand design of making a gallery of portraits of all the distinguished actors in the Revolution, American and foreign, and commenced the task with vigor. In the spring of 1778, when the army moved, he gathered up his art materials, and, at the head of his company, he fought gallantly at Monmouth. He had commenced a full-length portrait of Washington, at Valley Forge; after the Monmouth battle, he had another sitting, and at Princeton he completed it. He lived temperately and frugally, and practiced his art in colors when past eighty years of age. He died in February, 1827, at the age of almost eighty-six.

PEIRCE, Benjamin, was born at Salem, Mass., April 4, 1809, and graduated at Harvard College, at the age of twenty years. He became a tutor there in 1831; university professor in mathematics and natural philosophy in 1833; and Perkins professor of astronomy and mathematics in 1842, in which position he continued until his death, a period of thirty-eight years. In 1849, P. was appointed consulting astronomer to the *American Ephemeris and Nautical Almanac*. He was one of the scientific council to which was intrusted the organization of the Dudley Observatory, at Albany, in 1855. He assisted Prof. Bache in the coast survey and rendered valuable aid in this great national work for several years. In 1867 he succeeded Prof. Bache as Superintendent of the coast survey, but resigned the office in 1874. P.'s labors in the realm of science were incessant and most valuable. While he was a pupil of Dr. Bowditch, he read the proof-sheets of the translation of La Place's *Mecanique Celeste*. He undertook the publication of the "Cambridge Miscellany of Mathematics, Physics, and Astronomy," of which only five numbers appeared. Between 1836 and 1846 he prepared a series of mathematical text-books which are used in Harvard College. His Boston lectures on the comet of 1843 aroused an interest which led to the foundation of the observatory at Cambridge; and his investigations relating to the discovery of Neptune by Leverrier, in 1846, attracted the attention of astronomers in Europe and America, and proved him to be a thinker of extraordinary power. Died at Cambridge, Mass., Oct. 6, 1880.

PETERS, Richard, the first Secretary of War of the United States, was born near Philadelphia, on the 22d of August, 1744, and was educated at the college in that city, where he was graduated in 1764. At the opening of the Revolution he appeared in the field as captain of a company of volunteers; and when, in June, 1776, a Board of War was appointed by Congress, P. was chosen its Secretary, and thus became the first incumbent of that office, now one of the cabinet bureaus. He held that position until 1781, and performed the duties of his station with great ability. He was then elected a member of Congress, and was a representative of his State therein for several years. On the organization of the Federal Government, in 1789, he declined a fiscal office tendered to him by Washington, but accepted that of judge of the United States District Court of Pennsylvania. He bore the ermine with great honor to himself and country, for thirty-six years. He died at Bloekley, near Philadelphia, August 21, 1828, eighty-four years of age.

PHYSIC, Philip Syng, who has been appropriately called the *Washington*—the Hero and Sage—of the medical profession, was born in Philadelphia, on the 7th of July, 1768. His father had been keeper of the great seal of the colony of Pennsylvania; and, prior to the Revolution, he had charge of the estates of the Penn family, as confidential agent. At eleven years of age, Philip was placed under the charge of Robert Proud, principal of an academy that belonged to the Society of Friends, and in due time entered the University of Pennsylvania, as a student. He was graduated in 1785, and immediately commenced the study of medicine with the distinguished Professor Kuhn. After attending a course of medical lectures at the university, he embarked for Europe, in the autumn of 1788, in company with his father, who procured the admission of Philip to the private instruction of the eminent Dr. John Hunter. On the earnest recommendation of Dr. Hunter, P. was appointed house surgeon to St. George's Hospital, in 1790, to serve one year. At the close of the term he received a diploma from the Royal College of Surgeons, in London, and Dr. Hunter offered him a professional partnership. The young man had resolved to make his native city the chief theater of his career, and after remaining with Hunter during 1791, he went to Edinburg, studied and observed diligently there, in the University and in the Royal Infirmary, obtained the degree of M.D., in May, 1792, and in September, returned to America. He entered upon the practice of his profession, in Philadelphia. In 1793, the yellow fever tested his skill, moral courage, and benevolence, to the utmost, and all appeared eminently conspicuous. The following year he was chosen to be one of the surgeons of the Pennsylvania Hospital; and, when the yellow fever again prevailed, in 1798, his services were of the greatest importance. In 1801, he was appointed surgeon extraordinray to the Philadelphia Almhouse Infirmary. The following year, on the earnest request of a number of medical students, he delivered a course of lectures on Surgery. In 1805, a professorship of surgery, distinct from anatomy, was instituted in the University of Pennsylvania, and P. was called to that chair. In 1819, he was transferred to the chair of anatomy, in the same institution. In 1821, he was appointed consulting surgeon to the Philadelphia Institution for the Blind; and, in 1824, he was elected president of the Philadelphia Medical Society, a station which he filled with great dignity until his death. In 1825, the French Royal Academy of Medicine made him an honorary member of that institution, the first dignity of that kind ever received by an American. He was also made an honorary fellow of the Royal Medical and Chirurgical Society of London. In 1831, failing health caused him to resign his professorship in the University, when he was immediately elected Emeritus Professor of Surgery and Anatomy, in that institution. He died, December 15, 1837, sixty-nine years of age.

PICKERING, Timothy, was born in Salem, Mass., July 17, 1745. At fourteen years of age, he entered Harvard

College, and was graduated at nineteen. He studied law, and entered upon its practice at the moment when the tempest of popular indignation, raised by the Stamp Act, was sweeping over the land. He had the honor of making the first resistance to the invasion of the province by British troops. He was informed that a body of them had landed at Marblehead, for the purpose of marching through Salem to seize some American stores in the interior. It was Sunday, the 25th of February, 1775. The ministers of the churches dismissed their congregations. The men gathered at the call of P., and when the invaders approached the Salem drawbridge, these minute-men boldly confronted them. Perceiving prudence to be the better part of valor, the British marched back to Marblehead, and returned to Boston. Early in the spring of 1775, P. was chosen judge of the Court of Common Pleas, of Essex; and when, on the 19th of April, intelligence of the skirmish at Lexington reached him, he hastened, at the head of his regiment, to intercept the invaders. After that he exercised the duties of his judgeship, until the autumn of 1776, when, at the head of seven hundred Essex men, he joined the army under Washington, near New York, and was with him in his memorable retreat across the Jerseys. He continued with the chief until the winter of 1777–'8, when he was appointed, by Congress, a member of the Board of War. In the battles at Brandywine and Germantown, he had acted as adjutant-general, and his military skill and experience commended him highly to his commander and the national council. In 1780, he succeeded General Green in the important office of quartermaster-general. At the close of the war he made Philadelphia his residence. In 1790, he was a member of the convention to revise the constitution of Pennsylvania; and the following year Washington appointed him Postmaster-general. He continued in that office until the resignation of General Knox, almost four years afterward, when he succeeded that officer as Secretary of War. The same year he was appointed Secretary of State, and held the position until 1800, when Mr. Adams removed him. The legislature of Massachusetts chose him to represent that State in the United States Senate, in 1803; and, in 1805, he was re-elected for six years. He was a member of the Board of War, of Massachusetts, in 1812, and, in 1814, he was elected a member of the United States House of Representatives. He retired from public life, in 1817. Died at Salem, January 29, 1829, when almost eighty-four years of age.

PIERCE, Benjamin, the father of the fourteenth President of the United States, was born in Chelmsford, Massachusetts, on Christmas day, 1757. At seventeen years of age, six days after the retreat of the British troops from Concord, he was enrolled as a regular soldier. He fought bravely on Breed's Hill seven weeks afterward· was with the army about Boston until the British were driven from thence, in the spring of 1776; followed the fortunes of Washington during the ensuing campaigns of that year, and was orderly sergeant of his company, before he was twenty years of age, in the glorious conflicts which resulted in the capture of Burgoyne at Saratoga, in the autumn of 1777. His valor there won for him the commission of ensign. The young man who bore that commission and the American flag, in the hottest of the fight, was killed. Young P. rushed forward, seized the banner, and bore it triumphantly to the American lines, amid the shouts of his companions. He remained in service during the whole war, and reached the rank of captain. When the American troops entered the city of New York, in the autumn of 1783, P. commanded the detachment sent to take possession of the military works at Brooklyn. About 1789, he was elected to a seat in the New Hampshire legislature, and was promoted to the command of a regiment. When, in 1798, Congress authorized the raising of a provisional army, in expectation of war with France, P. was offered the same commission in the regular service, but he declined it. In 1803, he was elected to the council of his State, and retained that office by re-election until 1809, when he was appointed sheriff of the county of Hillsborough. The governor had already commissioned him a brigadier-general of the militia. In 1827, he was chosen governor of New Hampshire; and, in 1829, he was again called to the same station. Three years afterward he held his last public office. It was in the autumn of 1832, when he was chosen, by the democratic party, a presidential elector. He died on the 1st of April, 1839, in the eighty-second year of his age.

PINCKNEY, Thomas, was born at Charleston, on the 23d of October, 1750, and at three years of age was taken to England, and there educated. In early boyhood he felt a martial spirit stirring within him. It grew with his growth, and his studies were almost exclusively military, on his arrival home. He became a thorough tactician in theory, and, on the organization of a military force in his native city, he was intrusted with the command of a company. He was a rigid disciplinarian, yet his men all loved him. He soon rose to the rank of major, and was very active in recruiting and disciplining the militia, until the arrival of General Lincoln in 1779, as commander-in-chief of the Southern army. Lincoln appointed P. one of his aids, and in that capacity he was engaged in the siege of Savannah, in the autumn of that year. Several months previously, he had gained great applause for his gallantry in the battle at Stono Ferry, just below Charleston. He was not among the captives at Charleston, in May, 1780; and when Gates took command of the Southern army, P. was appointed his aid. He fought gallantly at the battle near Camden, in August, and there had his leg badly shattered by a musket ball. He could not retreat, and was made a prisoner and sent to New York. His wound disabled him during the rest of the war, and he remained in private life until 1787, when he was elected to succeed General Moultrie as governor of South Carolina. He displayed statesmanship of the highest order; and, in 1792, President Washington appointed him minister plenipotentiary to the British court. He managed the complicated and important affairs of his mission with great skill. Toward the close of 1794, he was appointed minister to Spain, and took up his residence at Madrid the following year. He soon afterward concluded a treaty with the Spanish court, by which the free navigation of the Mississippi was secured to the people of the United States. He returned home the following year, to attend to his domestic affairs, and remained in private life until the proclamation of war with Great Britain, in 1812, called many a veteran hero to the field. President Madison appointed P. to the command of the Southern Department, and it was under his directions that General Jackson successfully prosecuted the war with the Indians. His forecast and generosity opened to Jackson that military career which he pursued so gloriously. He died on November 2, 1828, when a little more than seventy-eight years of age.

PINKNEY, William, was one of the most profound and brilliant of the orators and statesmen of his age, and equally renowned as a diplomatist. He was born at Annapolis, Md., March 17, 1764. He was admitted to the bar at the age of twenty-two years, and soon afterward he commenced the practice of his profession in Hartford county, Maryland. In 1792, he was elected to a seat in the executive council of Maryland; and, in 1795, was chosen a delegate to the State legislature. The following year, President Washington appointed him one of the commissioners under the provisions of Jay's treaty, and he proceeded to England. He performed his arduous and varied duties with great ability and success. Soon after his return to America, in 1805, he removed to Baltimore, and was appointed attorney-general of

Maryland. In 1806, he was again sent to England to treat concerning the impressment of American seamen into the British service, and other matters which finally resulted in war. After remaining in Europe several years, he returned in 1811, and became one of the most ardent supporters of Mr. Madison's administration. He was chosen a member of the Maryland Senate, and toward the close of 1811, President Madison appointed him attorney-general of the United States. He went to the field in defence of his native State, in 1814, and fought the British bravely at Bladensburg. He was soon afterward elected to Congress; and, in 1816, he was appointed minister to the court of St. Petersburg. There he remained until 1820, when he returned home, and was immediately chosen to a seat in the United States Senate. In that body, and in the Supreme Court of the United States, he labored intensely until the close of 1821, when his health suddenly gave way. He died on the 25th of February, 1822, in the fifty-ninth year of his age.

PORTER, David, was born in Boston, on the 1st of February, 1780. He had early manifested a great desire to become a sailor; and, at the age of nineteen years, that ardent aspiration was fully gratified. His talent and general energy of character attracted the attention of some influential friends, who procured for him a midshipman's warrant; and at the time when war with France was yet a probability, he sailed in the frigate *Constellation*. His first experience in naval warfare was during that cruise, when the *Constellation*, in February, 1799, captured the French frigate, *L'Insurgente*. His gallantry on that occasion was so conspicuous, that he was immediately promoted to lieutenant. He was also engaged in the severe action with *La Vengeanee*, a year later; and, in the autumn of 1803, he accompanied the first United States squadon to the Mediterranean, sent thither to protect American commerce against the Barbary pirates. He was on board the *Philadelphia*, when that vessel struck upon a rock in the harbor of Tripoli, and was among those who suffered a painful imprisonment in the hands of that barbarous people. After that [1806] he was appointed to the eommand of the brig *Enterprise*, and cruised in the Mediterranean for six years. On his return to the United States he was placed in eommand of the flotilla station in the vieinity of New Orleans, where he remained until war was declared against Great Britain, in 1812. Then he was promoted to captain; and, in the frigate *Essex*, he achieved, during the remainder of that year, and greater part of 1813, those brilliant deeds which made him so famous. From April to October, 1813, he captured twelve armed British whale-ships, with an aggregate of one hundred and seven guns, and three hundred men. He also took possession of an island of the Washington group, in the Pacific, and named it Madison, in honor of the then President of the United States. The English sent a number of heavy armed ships to capture or destroy P.'s little squadron; and near Valparaiso, on the coast of Chili, the *Essex* was captured, in February, 1814, after a hard-fought battle with immensely superior strength. Commodore P. wrote to the Secretary of the Navy, "We have been unfortunate but not disgraced." When he came home he was every where received with the highest honors. Congress and the several States gave him thanks, and by universal aeclamation he was called the Hero of the Pacific. He afterward aided in the defence of Baltimore. When peace came, he was appointed one of the naval commissioners to superintend national marine affairs. In 1817, he commanded a small fleet, sent to suppress the depredations of pirates and freebooters in the Gulf of Mexico, and along its shores. Commodore P. resigned his eommission in the summer of 1826, and was afterward appointed resident United States minister, in Turkey. He died near Constantinople, March 3, 1843, sixty-three years of age.

PRENTISS, Sargeant S., was a native of Portland, Maine, where he was born in 1810. He received an excellent classical eduеation, and at about eighteen years of age he went to Mississippi, where, in the vicinity of Natchez, he spent about two years as tutor in a private family, and in the pursuit of legal studies, under the instruction of General Felix Houston. P. was always remarkable, from boyhood, for fluency of language and ready wit; and his first speeeh to a jury, after being admitted to the bar, won for him the highest applause from judges, colleagues, and opponents. He made Vicksburg (then a small village) his residence, in 1830, and he soon became the acknowledged head of his profession in that region. His practice became very lucrative, and the payment of his fee, in land, for his successful management of a suit which involved the most valuable portion of Vicksburg, made him, in a short time, one of the wealthiest men in the State. P. entered the field of politics with great enthusiasm, and was a brilliant and successful stump orator; but at about the time when his fellow-citizens called him to service in the national counеils, he became embarrassed during the financial troubles of 1836, and removed to New Orleans to retrieve his fortune by professional labor. He first became known to the people of the United States, in general, when, in 1837, he appeared in the House of Representatives as the claimant of a disputed seat there. His speeeh in favor of his claim was listened to with the most profound attention, and it was admitted by all, that he had no superior in the country as an eloquent and logical parliamentary debater. His claim was rejected by the easting-vote of the Speaker, Mr. Polk, and he was sent back to the people. He at once canvassed the State, and was re-elected by an overwhelming vote. His services in the Hall of Representatives were brief, but brilliant in the extreme. Private engagements, and a distaste for political life, eaused him to refuse office, and with great industry he applied himself to his profession, in New Orleans. He died at Longwood, near Natchez, on the 1st of July, 1850, at forty years of age.

PRESCOTT, William, was born in Goshen, Massachusetts, in 1726. Of his early life we have no reliable record. He took quite an active part in the popular movements while the Revolution was ripening, and had command of a regiment of minute-men, in the spring of 1775. The events at Lexington and Concord called him to the field, and he was very active in assisting General Ward in the organization of the impromptu army that gathered around Boston, in May and June following. Confident in his military skill, General Ward selected Colonel P. to fortify and garrison Bunker's Hill, and on the evening of the 16th of June, 1775, he crossed Charlestown Neck, for that purpose, with a thousand men, and intrenching tools, after an impressive prayer in their behalf was offered up on the green at Cambridge, by President Langdon, of Harvard College. Breed's Hill being nearer Boston, P. proceeded to fortify that, and at early dawn the next morning, the British in the city and on the shipping in the harbor, were astonished and alarmed by the apparition of a strong redoubt, almost finished, in a position which commanded their most impressible points. In the action that ensued, the following day—the memorable 17th of June—P. was chief eommander. Putnam was on Bunker's Hill, urging forward reinforeements, and General Warren was in the redoubt, as volunteer. Though driven from the Charlestown peninsula, the gallant colonel wished to attack the conquerors the next day, but was overruled by prudent eounsellors. He continued under the command of Washington until after the battle at White Plains; and served as a volunteer under Gates, until the surrender of Burgoyne, in October, 1777. After the war, he represented his district in the State legislature, and was acting magistrate of Pepperell from 1786 until his death, on October 13, 1795, at sixty-nine years of age.

MEMORABLE AMERICAN EVENTS AND STATISTICS.

CHICAGO FIRE. On October 7, 1872, a destructive fire broke out in Chicago, causing the loss of one million of dollars. On the 8th succeeded the most disastrous conflagration as yet recorded in the annals of the country. The second fire commenced on the Sunday evening of the 8th, and continued to rage until the noon of the following day. The lives lost are estimated at 250, persons rendered homeless, 98,500, and buildings consumed, 17,500; while the value of property destroyed stands at the enormous total of one hundred and ninety-two millions of dollars. The fire burnt up the business and best built portion of the city. Two thousand acres were left covered with ruins. So completely did the fire do its work that in not more than a dozen cases were the chimneys or fire-walls of the great blocks, or any of the buildings, left standing.

CHINESE LABOR. In 1883 a law was passed excluding newly-immigrating Chinese laborers from the country, and requiring those already established to take out certificates, if they quitted the U. S., in order to prove their identity in the event of return.

CIVIL RIGHTS BILL. In 1875 the Civil Rights Bill passed Congress. It provided that all citizens, regardless of race, color, or previous condition of servitude, should have equal privileges at inns, theatres and schools, and on railroad, steamboat, and other transportation lines. This was to enforce the Fourteenth and Fifteenth Amendments to the Constitution, its projectors claimed. The law was provoked by discriminations, chiefly in the late slave States, against the freedmen in travelling and at places of amusement. Bitter opposition to the measure was offered by Southern Congressmen, principally on the ground that it was an invasion of State Rights not warranted by the Constitution. A few years later some portions of the Bill were found by the U. S. Supreme Court to be unconstitutional.

CIVIL SERVICE. In March, 1871, Congress passed an Appropriation Bill and, by a clause in it, the President was authorized to prescribe such rules and regulations for the admission of persons into the Civil Service of the United States, as would best promote its efficiency, and ascertain the fitness of each candidate in respect to age, health, character, knowledge, and ability for the service into which he might seek to enter.

CREDIT MOBILIER. This scandal came to light in 1873, Mr. James G. Blaine bringing forth the following facts in the House of Representatives. No private contractors could be engaged to build the Union Pacific Railroad which Congress chartered in 1862. A corporation was therefore formed called the Credit Mobilier, of which the stockholders were for the most part stockholders of the railroad company. This new organization agreed to build the road in consideration of certain land grants and government bonds issued originally to the railroad company to assist its construction. The capital stock of the Credit Mobilier was $2,500,000, but, by subsequent legislation, this was increased fifty per cent., the addition being taken by the holders of the original stock. The Credit Mobilier then went to work, and built the road. The profits derived from the contract were so great that in the winter of 1867-8 the stock was estimated to have a value of $380 or $400 per share of $100. It was not, however, placed on the general market. All sales were private, which precluded a knowledge of the character of the scheme. In June, 1868, a dividend of $60 a share was declared. It came to light that during the winter one Oakes Ames, a Congressman from Massachusetts, had approached various Congressmen and Senators with dulcet and whispered offers of Credit Mobilier stock at the low figure of $100 per share. Some of these, including Schuyler Colfax, then Speaker of the House, purchased the stock, a few paying cash, the bulk giving notes. They afterwards alleged that they saw no impropriety in the purchase, any more than in any other investment. Upon inquiry, it appeared that the Pacific Railroad and Credit Mobilier Companies would not ask for any further legislation from Congress, and so most of the purchasers, if troubled with conscientious scruples, concluded that they might honorably retain the stock. Some of them, however, becoming mistrustful, returned it to Mr. Ames and took up their notes. But, while the corporations did not intend to ask for positive legislation, they were threatened by adverse legislation, to nullify which they desired to sway as many members as possible. Some popular dissatisfaction at the high rates of transportation charged by the Union Pacific induced Mr. Washburne of Wisconsin to introduce a bill into Congress to provide for their reduction. This was known as the 'Washburne Movement,' and was anticipated. A hint as to the profits enjoyed by the Credit Mobilier, led to a rumor that a portion of the land grants to the Union Pacific would be cancelled. An investigating committee was named by Congress, which expelled Oakes Ames, and castigated other members of the House. This scandal became a factor in subsequent national politics.

DOLLAR, SILVER. In 1878 Congress passed a bill requiring the coinage of two millions of dollars in silver dollars of 412½ grains each, monthly. This was the culmination of a movement that had been in progress for three or four years. When the inflationists found themselves unable to get a law for unlimited paper money they began to agitate for silver money. The silver dollar had been out of circulation during the war; and in 1873, a law was passed making gold the exclusive currency standard. Owing, however, to the depreciation of silver, the amount of the metal which went into a dollar was now worth only about ninety cents in gold. Remonetization of silver was therefore opposed by the old hard money class as a blow at the public credit, and President Hayes vetoed the silver bill when it was first enacted; but Congress passed it in the promptest manner over Hayes's veto.

EAST RIVER BRIDGE. On May 24, 1883, the East River Bridge connecting New York with Brooklyn was opened for travel. The general plan of this structure included a massive stone tower 276 feet 9 inches on each shore, and perforated for the roadways by two tall narrow arches beginning 119 feet up from the water; four steel wire cables, 16 inches in diameter, securely fastened in a mass of masonry 930 feet back from the water edge on the New York side, stretching up over the top of the towers across the river to the other tower, and then down to an anchorage 930 feet away, in Brooklyn, and a series of stout steel bands, or 'suspenders,' each capable of holding up 100 tons, attached to the cables and hanging down to support the promenade of the bridge. The main span is 1595 feet 6 inches long; the two land spans each 930 feet; the masonry viaduct, or approach, on the Brooklyn side 971 feet, and the New York approach 1562, making a total of about 6,000 feet. The approaches are about 100 feet wide, but the bridge proper is only 85 feet. It is divided lengthwise into five passage ways, the outward for teams, the next two for cars propelled by cables, and the innermost for foot passengers. From the ends to the centre, the structure rises in a gentle curve, and the middle of the bridge is 135 feet above water in summer, and, owing to contraction from cold, 138 feet in winter. This enables most large ships to pass under without lowering their topmasts. The bridge was designed by John A. Roebling, of Trenton, N. J., builder of the first suspension bridge at Niagara.

ELECTORAL COMMISSION. The presidential election of 1876 was followed by an exceptional and alarming controversy. The Republicans had nominated for President, Rutherford B. Hayes of Ohio, who, the previous year, had defeated William Allen in a contest for gubernatorial honors, on a hard-money platform. William A. Wheeler of New York, who had been instrumental in adjusting the Louisiana troubles was chosen for Vice-President. The Democrats nominated Samuel J. Tilden, then Governor of New York, and Thomas A. Hendricks of Indiana. Their platform condemned the use of troops in the South, and favored a reduction of the tariff. The Greenback party named Peter Cooper of New York, and Samuel F. Cary of Ohio as its candidates. The other parties favored hard money. For several days after the election in November the result remained in great doubt. Four States were finally disputed. The Returning

Board in Louisiana gave the Hayes ticket a majority of about 4,000, but secured that result by throwing out the vote from several parishes on account of intimidation of voters. The Democrats claimed that these returns should also be counted, which would give Tilden the State. In South Carolinia the returns were canvassed by the Legislature. Two bodies claiming to be such were organized. One found a plurality of about 800 for the Republican ticket; the other a smaller one for the Democratic ticket. In Florida, a similar dispute arose, the majorities claimed by both sides being scarcely over one hundred. Finally, in Oregon, which gave an unquestioned Republican majority, one candidate for presidential elector on the winning ticket was said by his enemies to be ineligible on account of having been postmaster when nominated. Governor Grover then proposed to give certificates of election to his two Republican colleagues, but to a Democrat, Cronin, in his stead. This situation derived the greater importance from the fact that the Democrats had 184 electoral votes in the country unquestioned, while the utmost claims of the Republicans gave them only 185. The change, therefore, of a single vote, would elect Tilden. This condition of things raised party excitement to white heat. The Tilden party shouted 'fraud' and seemed to believe that their honestly won prize had been stolen, while the Hayes party claimed that their returning boards had acted legally and honestly, and that the Oregon Democrats were practising wicked and dangerous games. The complication was increased by the fact that one party controlled each house in Congress; and as the electoral vote must be counted at a joint session of the two, and double sets of returns would come from four States, a quarrel was sure to arise in Congress which threatened to end disastrously. Impetuous Democrats talked of marching an army of volunteers to instal Tilden as President at all hazards. Revolution and civil war seemed imminent. The electoral dispute was considered by Congress when it met in December, and, after a few weeks, a bill was passed constituting a special tribunal to decide the mooted points when the count commenced in February. This tribunal consisted of five Senators appointed by the Vice-President (three Republicans and two Democrats), five Representatives appointed by the speaker (three Democracts and two Republicans), and five Judges of the Supreme Court. The Electoral Commission decided that the Louisiana returning board had only exercised powers clearly accorded by the State law, and that Congress could not go behind the returns to inquire whether that board had performed its duty honestly or otherwise. South Carolina and Florida were similarily disposed of; and all three States were counted for Hayes. The ineligibility of Watts in Oregon was not recognized, and the manner in which his electoral vote was cast for Hayes was declared legal. The count, therefore, when completed, gave Hayes 185, and Tilden 184, but it was not completed until two days before the time of inauguration. Revised returns gave the three disputed Southern States to the Democrats on the State tickets, and restored to that party a 'solid South.'

FENIAN RAIDS INTO CANADA. Two expeditions were organized by the Fenians in 1866 for the invasion of Canada and New Brunswick. One numbering about 500 men, gathered in April at Eastport, Maine, with an intention of making a descent upon the island of Campobello, belonging to New Brunswick. After a delay of some days, a schooner arrived from Portland with 750 stand of arms. The British Consul at this port complained, and the arms were seized by the U. S. government. A British war steamer anchored off Campobello, and troops were summoned to prevent the invasion of the Province, and a detachment of U. S. troops was sent from Portland to Calais, at which point many of the Fenians had congregated. General Meade arrived on the 19th of April, and took command of the U. S. troops. A few days later, the Fenians lost heart, as their friends in New York did not send support, abandoned the raid, and disintegrated.

On May 19, the U. S. authorities at Rouse's Point on the Canadian frontier seized 1,200 stand of arms. On the 30th, the Fenians convened at Buffalo, and met in secret convention. At St. Albans on the same day the U. S. authorities seized 1,200 stand of arms. The military enthusiasm of Canada was now roused, and troops were moved upon all the threatened points. It was on the first day of June that a force of some 1,200 to 1,500 Fenians crossed the Niagara River at Buffalo, in Canal boats, and took possession of Fort Erie, an old work then unoccupied. On the 2d, there was a skirmish between some Fenians and Canadian volunteers, in which several of the latter were reported killed and a large number wounded. On the night of the same day, the Fenians being without supplies, artillery or reinforcements, attempted to retreat into the United States, but they were intercepted by a United States gunboat, and 700 were arrested. General Barry, then in command of the U. S. forces in that vicinity, accepted a parole from over 1,300 of the Fenians, who promised to abandon the enterprise. The officers were relieved by giving bail that they would appear when required for trial for an infraction of the neutrality laws. Fenians, however, continued to arrive from various parts of the country, but were ordered to return home by their commanders. In accord with this movement at Buffalo, Fenians were reported as assembling on the border in Vermont, and Malone, New York, and General Meade, in command of the U. S. troops, proceeded to Ogdensburg to commence operations for preventing the invasion. On the 7th of June, the Fenians, numbering over 1,000, crossed the frontier and took possession of St. Armand, which had been evacuated by the Canadians. On the same day one of the chief officers of the Fenian organization in the United States was arrested at St. Albans, Vt., and three at New York, and several other leaders at Buffalo. On the 9th, upon the advance of the Canadians at St. Armand, the Fenians retired and recrossed the frontier. General Meade arrested large numbers of the Fenians, accepted their parole, and provided them with means of transportation, for all who required it, to their homes.

FRIDAY, BLACK. The events which have caused Friday, the 24th day of September, 1869, to be designated 'Black Friday,' stand out luridly in the annals of the financial centre of this great country. For some little time previous to this date, a feeling prevailed that speculating in gold, which had been extensively engaged in throughout the war, was rapidly drawing to a close, and that the country was in the near future to resume specie payments. In the spring of this year gold fell to 131, at which price a clique of speculators in New York purchased several millions, and then, inducing a number of newspapers to magnify the probability that difficulties would arise from the Alabama Claims, a European war, the Cuban insurrection, and various other troubles, they forced up the price to 145, and made an immense pile. Down again came the price to 131, and the belief gained foothold that it would drop to 120. It was at this crisis that a conspiracy was formed among several speculators to control an immense amount of gold and send up the price. The financial policy of the government requiring the payment of duties in gold continuously created an imperative and legitimate demand for it. This clique operated so 'smartly' that the price by Wednesday the 22d of September was pushed up to 141. Stocks, always sympathizing with a marked change in the value of specie, on that day greatly fluctuated in price, amidst great excitement on the Stock Exchange, causing more surprise than the advance in gold. New York Central fell 22 per cent. in a few minutes, Hudson River 13 points, and other stocks instantly fell into line, placing dealers in bitter straits. Brokers called on their customers to increase their margins, which the day had wiped out. The money market became very tight, and high rates were paid so that balances could be carried over until the next day. When the dealings of Thursday morning opened it was at once evident that the conspirators had the grip, for gold continued to go up. The margins which had been increased with great difficulty and in many instances at considerable sacrifices the night before were again swept away, and there was a new call for their increase. This was beyond the power of all but the very strongest operators. All the small and medium speculators failed, or settled their obligations on the best terms they could. The wealthy dealers stood back to back and bade defiance to the clique. This was a day of the wildest excitement, of rushing, and of alternating hope and fear, such as had rarely, if ever, been witnessed, even during the war. The day closed with gold at 144.

On the morning of the never-to-be-forgotten 24th, every passage leading to the Gold Room was a solid mass of humanity, in a condition of excitement bordering upon insanity. At the opening of the Board the price of gold was 150—an advance of 6 per cent. on that of the highest quotation of the day before. It now became well and accurately known that the conspirators themselves held in gold and contracts for delivery something like a hundred and twenty millions, while all the current gold in New York could scarcely reach the sum of twenty-one millions. The Government alone could cut the Gordian knot, 'break the corner' by the sale of gold in the sub-treasury; but the deaf ear which had been turned to frantic appeals to Washington, if it did not confirm the boast of the conspirators that

members of the Government was in league with them, at least destroyed all hope of relief from that quarter. As the clock struck eleven the price was 155; at half past eleven it was 160, and then sprung up to 162, and then leaped to 164. In the whirl of the maddest excitement, when every human being engaged in operating was at white heat, and when the price was vibrating at the highest points, a breathless messenger arrived in the Gold Room with this 'glad tidings of great joy,' that the Government would sell gold, and almost ere he had delivered his message, the price crashed down to 135. The power of the conspirators was shivered, and one of the most daring of plots defeated. The great crisis was now at an end, but so large had been the dealings that the Gold Exchange Bank, which was the agent to settle the clearings, had not yet been able to foot up, and settle the transactions of the previous day, so there yet remained dismal doubt and uncertainty, and the shadow of disaster continued to darken Wall Street and its surroundings. The calamity to the business community which the conspirators had inflicted, was now keenly felt, and so great was the indignation against the unscrupulous clique, that its members were compelled to seek safety in seclusion. Efforts the most persistent were made to implicate the President in their transactions, and Congress appointed a Committee to investigate the charges, but they proved to be absolutely void of foundation.

GARFIELD, Assassination of. President Garfield was assassinated July 2, 1881, by Charles J. Guiteau, who shot him in the back at the railway-station in Washington, just as he was leaving town for Elberon, to see his invalid wife. He had intended to proceed thence to Williams College. The wound did not prove immediately fatal, and part of the time during the next few weeks there was a prospect of the President's recovery. The political situation added fuel to the popular excitement. Roscoe Conkling, Senator from New York, felt wronged by the appointment by Garfield a few weeks previously of Judge Robertson to the New York Custom House. Conkling and his colleague, Platt, had resigned their seats in the Senate, and were now candidates for re-election, hoping by this movement to secure a verdict from their own State condemning the act of the President; and Vice-President Arthur was at Albany giving yeoman's aid to Conkling, when the dastardly deed was committed. Guiteau had said, "I want to see Arthur become President." There were many foolish people who could not for a time set aside the idea that Garfield had been a victim of Conkling's malevolence; and that Arthur, if he became President, would work a revolution in the patronage and policy of the Government in the interest of Conkling. For two months and a half the country was kept in profound suspense by Garfield's condition. The malarial atmosphere around the White House proving hurtful to the sufferer, he was removed to Elberon on Sept. 6, where he died Sept. 19. Since Lincoln's death there had been no such demonstration of grief. The body was taken to Washington, exposed to view in the capitol, and finally removed for burial to Cleveland, with an imposing military and civil escort. Vice President Arthur took the oath of office as President, immediately after Garfield's death. Guiteau was arrested on the spot and was arraigned in Washington in November, the trial lasting ten weeks. Guiteau in his own behalf testified that he had been inspired by God to "remove Garfield" in the interests of the peace of the country. His plea was insanity. The jury convicted him January 25, 1882, and he was hanged June 30.

GREELY EXPEDITION. On the 22d of June, 1884, the survivors of the Greely party were rescued at Fort Conger, Lady Franklin Bay, in the Arctic regions. A special relief expedition was sent out by the U. S. government, which happily succeeded in effecting the rescue. The history of the enterprise is this. In the summer of 1881 a party of soldiers, commanded by Lieutenant A. W. Greely, was sent to this point by the Signal Service of the United States (of which Greely is now the chief) to be one of about a dozen at various circumpolar stations, established by several countries, for scientific observation during the next year or two. All of the other expeditions bore good fruit, and returned without loss of life. This enterprise contemplated an expedition to Lady Franklin Bay in the summer of 1883, to fetch the Greely party back, or to deposit provisions near enough to his station to be readily found on his retreat southward. The relief expedition proper—the 'Neptune' had already deposited provisions at Cape Sabine—comprised two vessels, the steam-whaler 'Proteus,' and the U. S. gunboat 'Yantic.' The 'Proteus' was ripped by the ice and sunk, and the 'Yantic' was left in the rear at Upernavik. A new expedition was fitted out by the Navy Department, consisting of the steam-whalers 'Thetis' and 'Bear,' while the British government contributed as a gift the Arctic exploring vessel 'Alert.' The expedition sailed in May. On June 22d the crew of the 'Bear' discovered papers at Brevoort Island locating Greely's camp, and announcing that the party were on the brink of starvation. The launch of the 'Bear' succeeded in finding the party before evening. Only seven men, including Greely, were found alive, and two of them died soon afterwards. Eighteen others were already dead from starvation, most of them having expired within a few days of the arrival of succor.

IMMIGRATION into the United States from 1820 to 1886 Fiscal Year ending June 30.

Year.	*Total Alien Pass'grs.*	*Year.*	*Total Alien Pass'grs.*	*Year.*	*Total Immigrants.*	*Year.*	*Total Immigrants.*
1820	8,385	1837	79,340	1854	427,833	1871	321,350
1821	9,127	1838	38,914	1855	200,877	1872	404,806
1822	6,911	1839	68,069	1856	195,857	1873	489,803
1823	6,354	1840	84,066	1857	246,945	1874	313,339
1824	7,912	1841	80,289	1858	119,501	1875	227,498
1825	10,199	1842	104,565	1859	118,616	1876	169,986
1826	10,837	1843	52,496	1860	150,237	1877	141,857
1827	18,875	1844	78,615	1861	89,724	1878	138,469
1828	27,382	1845	114,371	1862	89,007	1879	177,826
1829	22,520	1846	154,416	1863	174,524	1880	457,257
1830	23,322	1847	234,968	1864	193,195	1881	669,431
1831	22,633	1848	226,527	1865	247,453	1882	788,992
1832	60,482	1849	297,024	1866	167,757	1883	603,322
1833	58,640	1850	369,980	1867	298,967	1884	518,592
1834	65,365	1851	379,466	1868	282,189	1885	395,346
1834	45,374	1852	371,603	1869	352,768	1886	334,203
1836	76,242	1853	368,645	1870	387,203		
					Total		13,448,644

Prior to the year 1820, no official records of the arrival of alien passengers were kept. It is estimated, however, that the total number arrived in the United States from the foundation of the Government to the year 1820, was 250,000. It has been estimated that prior to the year 1856 about 98 per cent. of the total aliens arrived were immigrants.

The nationality of immigrants to the United States in the year ending June 30, 1886, was as follows:—German, 84,403; Irish, 49,619; English, 50,803; Scotch, 12,126; Swedish, 27,751; Italian, 21,315; Norwegian, 12,359; Danish, 6,225; Swiss, 4,805; French, 3,318; European not classified, 55,404; all others, 5,668. Of the whole number of immigrants arrived at the above named period, 266,370 came through the customs district of New York, 25,046 through Boston, and 20,822 through Philadelphia.

The records at Castle Garden New York for the year ending December 31, 1886, show that 300,918 immigrants landed at the port of New York during that period, being 19,748 more than in 1885. Early in the year there was a falling off, but in June an increase began which was afterward maintained. The figures for each month were:—January, 7,299; February, 7,776; March, 20,023; April, 36,298; May, 41,370; June, 35,950; July, 24,434; August, 25,267; September, 30,186; October, 30,919; November, 24,670; December, 16,735.

LIBERTY, STATUE OF, Enlightening the World.—The statue of 'Liberty Enlightening the World,' by the sculptor, Auguste Bartholdi, presented by the people of the Republic of France to the people of the United States, was placed on Bedloe's Island, in the harbor of New York, in 1886, and the inauguration ceremonies were celebrated October 28th, in the presence of a million people.

The conception of the colossal figure originated in the mind of Edward Laboulaye, the illustrious French publicist and friend of American institutions, and was suggested by him to M. Bartholdi, in whose hands the statue grew into being. The first steps toward its construction were taken in 1874, when the Franco-American Union was established, a banquet was given in Paris, and an appeal made to the people of France, headed by the following statement:

'The monument of Independence will be executed in common by the two peoples associated in this fraternal work, as they were of old in establishing independence. In this way we declare by an imperishable memorial the friendship that the blood spilled by our fathers sealed between the two nations. It is a treaty of friendship which should be signed by all hearts which feel the love of their country,

'E. Laboulaye.'

M. Bartholdi began his work by making a small model Statue of Liberty, followed by an enlarged model, which was

enlarged four times. The latter was then divided into sections and again enlarged four times. The subsequent work involved an enormous mass of details. The moulds only were cast, the statue itself being composed of copper sheets beaten out to fit the requirements of the moulds. The moulding began in 1875. In 1876 the gigantic hand was completed and sent over to the Centennial Exhibition in Philadelphia. It was afterward exhibited in Madison Square, New York, and then returned to France. In 1877 Congress passed an act giving the statue a site either on Governor's or Bedloe's Island, leaving the choice to be made by General W. T. Sherman. He confirmed Bartholdi's selection of Bedloe's Island. An American committee was chosen, with William M. Evarts as its chairman. The head of the statue was executed and placed on view at the Paris exposition in 1878. The entire statue was combined in 1880, and mounted in Paris in October, 1881. It was formally presented to the United States in Paris, on July 4, 1884, M. de Lesseps making the presentation speech, which was responded to by the United States Minister, Mr. L. P. Morton. In April, 1885, the statue was taken apart and shipped in 210 cases on board the French man-of-war 'Isere,' which arrived in June, and the pieces were landed and stored on Bedloe's Island. The cost of the work before leaving France was about $250,000, mostly contributed by the French people in small sums.

In the meantime the American Committee was engaged in raising, by public subscription and state and national appropriations, the sum necessary to provide the pedestal for the statue. An appropriation of $50,000 by the New York Legislature having been vetoed by Governor Cleveland on the ground of unconstitutionality, an appropriation by Congress of $100,000 having failed by accident, and the appeal of the committee to the public for individual subscriptions meeting with a slow response, the New York *World* took up the work, started a subscription, and in four months from April, 1885, raised over $100,000, contributed by more than 120,000 patriotic American citizens. This secured the completion of the pedestal. The erection of the statue and putting on the finishing touches, under the direction of General Charles P. Stone, as chief engineer, occupied the summer of 1886. The first rivet was driven July 12th and the last October 28th.

The inauguration ceremonies, October 28, 1886, were attended by the President of the United States, members of the cabinet, the Governor of New York, and the governors of other states, members of the diplomatic corps, and many other distinguished guests, and by a deputation from France composed of M. Bartholdi, Count Ferdinand de Lesseps, Admiral Jones, and General Pelissier, representing the French Senate; M. Spuller and M. Desmons, representing the French Chamber of Deputies; M. Deschamps, Vice-President of the Municipal Council of Paris; M. Napoleon Ney, and the representatives of the French Ministers of war, marine, commerce, and public instruction; of the Paris Chamber of Commerce; and of the French press. A great procession, in which the military, firemen, Grand Army of the Republic, French societies, and other organized bodies, took part, marched through the principal streets of New York, after passing the President and the French guests in review at Madison Square; and there was a naval parade in the harbor. The exercises on Liberty Island consisted of an address by Count de Lesseps on behalf of the Franco-American Union, the presentation address by Senator Evarts, the speech of acceptance by President Cleveland, an address by the French plenipotentiary, M. Lefaivre, and a commemorative oration by Chauncey M. Depew, with a prayer by Rev. Dr. R. S. Storrs, and the benediction by Bishop Henry C. Potter. Two bronze tablets were placed on the sides of the central arch on the seaward face of the base of the pedestal inscribed as follows:—

This pedestal was built by voluntary contributions from the people of the United States of America.

Constructive and Executive Committee: William M. Evarts, Chairman; Richard Butler, Secretary; Henry E. Spalding, Treasurer; Joseph W. Drexel, V. Mumford Moore, Parke Godwin, Frederick A. Potts, James W. Pinchot.

Richard M. Hunt, Architect.
General Charles P. Stone, Engineer-in-Chief.
David H. King, Jr., Builder.
Completed A.D., 1886.

A gift from the people of the Republic of France to the people of the United States.

This Statue of Liberty Enlightening the World commemorates the alliance of the Two Nations in achieving the Independence of the United States of America, and attests their abiding friendship.

Inaugurated October 28th, 1886.
Auguste Bartholdi, Sculptor.

The following are the dimensions of the great work:—

	Feet	*Inches*
Height from base to torch	151	1
Foundation of pedestal to torch	305	6
Heel to top of head	111	6
Length of hand	16	5
Index finger	8	0
Circumference at second joints	7	6
Size of finger nail		13×10
Head from chin to cranium	17	3
Head thickness from ear to ear	10	0
Distance across the eye	2	6
Length of nose	4	6
Right arm length	42	0
Right arm greatest thickness	12	0
Thickness of waist	35	0
Width of mouth	3	0
Tablet length	13	7
Tablet width	13	7
Tablet thickness	2	0
Dimensions of Pedestal:		
Height of pedestal	89	0
Square sides at base, each	62	0
Square sides at top, each	40	0
Grecian columes base	72	8
Dimensions of the Foundations:		
Height of foundation	65	0
Square sides at bottom	91	0
Square sides at top	66	7

The statue weighs 450,000 pounds or 225 tons. The bronze alone weighs 200,000 pounds. Forty persons can stand comfortably in the head, and the torch will hold twelve people.

The total number of steps in the winding stairway which leads from the base of the faundation to the top of the torch is 403. From the ground to the top of the pedestal there are 195 steps. The number of steps in the statue, from the pedestal to the head, is 154, and the ladder leading up through the extended right arm to the torch has 54 rounds.

The electric light in the inside of the torch lamp aggregates 50,000 candle power, and at the base of the statue 30,000 candle power, being 80,000 candle power in all. The entire electrical plant is the gift of President Goff, of the American System.

The entire cost of the work from beginning to end is estimated at $700,000.

The Statue of Liberty is the tallest statue in the world. Compared with celebrated monuments and buildings, its rank will be found in the following enumeration:—Washington Monument, 555 feet; City Hall, Philadelphia, 535 feet; Cathedral of Cologne, 511 feet; Cathedral at Strasburg, 468 feet; Great Pyramid, 450 feet; St. Peters at Rome, 448 feet; Cathedral at Milan, 360 feet; *Liberty*, 305 feet; Brooklyn Bridge Towers, 287 feet; Trinity Steeple, New York, 284 feet; Monument, London, 240 feet; Bunker Hill Monument, 221 feet; Arc de Triomphe, Paris, 162 feet; Colossus of Rhodes, 105 feet; Obelisk, New York, 68 feet.

APPENDIX.

A SYNOPSIS OF THE PRINCIPAL EVENTS ALL OVER THE WORLD IN 1885.

January 1.—The New Year opened with the crash and unendurable horror of earthquake in Spain.—In "dusky Egypt" the "lone sentinel," General Gordon, was reported as holding his own against the Mahdi and desperate odds.

January 2.—An explosion of dynamite scared cockney London.—France despatched fresh re-enforcements to the seat of war in China with considerable pomp and circumstance.

January 3.—Mr. Gladstone was reported very ill.—Sunny Spain experienced another shock of earthquake.—In Russia the old grudge against the Hebrews broke out, and in many of the cities the "chosen people" were dispersed by the military for demanding the release of their co-religionists.—The promoters of the Exhibition of New Orleans, unable to make "the thing pay," solicited an additional appropriation, the expenses being $250,000 in excess of what the managers expected.

January 5.—The G. O. M. was bulletined as better.—The House of Representatives refused to abolish the taxes on tobacco and distilled spirits.

January 6.—The earthquake in Spain was felt still more severely. Thousands of people were rendered homeless. Large subscriptions in aid of the sufferers were collected.—President-elect Cleveland resigned the Governorship of New York.

January 7.—Spain was still throbbing with earthquake, the panic in the provinces on the increase.—General Grant distinctly and absolutely declined the financial aid offered by his friends.

January 8.—In Germany the Reichstag re-assembled and Bismarck with considerable spirit defended his policy.—It was reported that 1865 manufacturing and mining enterprises were established in the South in the year 1884, with an aggregate capital of $100,000,000. A mass meeting was held in New Orleans in aid of the Exhibition.

January 9.—A telegram from "England's only General," Wolseley, announced that he would reach Khartoum on the 24th of January.—In the Reichstag, Bismarck met with violent and stormy opposition.

January 10.—A hurricane of dense destruction passed over the west and south of England, bearing havoc and disaster.—The King of Spain with his Cabinet started to visit the scenes of the earthquake—an act that rendered him exceedingly popular.—General and Mrs. Grant wrote to Mr. William H. Vanderbilt, declining to allow him to purchase and present them with the General's "war relics."

January 12.—The wreckage on the British coast consequent upon violent storms was immense.

January 13.—Rome was threatened with serious damage by an overflow of the Yellow Tiber.

January 14.—The water of the Tiber receded.—The Bill to place General Grant on the retired list of the army passed the Senate: yeas 49; nays 9.

January 16.—The Annual Report of the Department of Agriculture showed the production of corn during 1884 as 1,895,000,000 bushels, wheat 513,000,000 bushels, and oats 583,000,000 bushels.

January 18.—The House of Representatives refused to consider the bill to place General Grant on the retired list of the army.

January 20.—John Bright published a remarkable letter discussing "the situation" in Great Britain.

January 21.—A desperate battle was reported to have been fought on the 16th between the troops of the Mahdi and the British under General Stewart, near Metemmeh, the former being defeated.—A large number of people were overwhelmed and destroyed in Italy by snow avalanches.—General Sheridan issued orders to the U. S. troops to remove the "Oklahoma settlers" from the Indian territory.

January 22.—The Governor of Texas reported extensive depredations by Mexicans on the frontier.

January 23.—The "Liberty Bell" started from Philadelphia on its journey to New Orleans.

January 24.—London was flung into frenzied excitement by three dynamite explosions occurring simultaneously in the Crypt, Westminster Hall, the Stranger's Gallery of the House of Commons, and in the Tower. [The damage done to Westminster Hall was great, showing that a large quantity of explosive matter had been placed inside the great ornamental gates leading to the crypt. The explosion in the House of Commons was even more destructive. The western extremity of the building was completely wrecked. The lobby and post-office were demolished, the force of the attack being so great that a man three hundred yards from the scene was knocked down. In the interior of the House of Commons several seats, including that of Mr. Gladstone, were overturned and broken. The explosion in the Tower of London was on the second floor of the White Tower. Three floors were entirely wrecked, and the explosion damaged many hundred stands of arms that were in the part of the building employed as an arsenal.]

January 26.—Edmund Yates, novelist, and proprietor of *The World*, was sent to prison for libel against "a lady of quality" in London society.—News was received from General Stewart and his command in the Soudan announcing desperate battles on the 16th and 19th.—A resolution offered by Mr. Bayard deprecating the dynamite outrages in England passed the Senate.—The Oklahoma invaders surrendered.—The Senate refused to ratify the Nicaragua treaty: yeas 32; nays 23.

January 30.—Considerable excitement was caused in England and France by the report that the commander of the Mahdi's troops was an ex-Communist named Pain, who escaped from the penal settlement at New Caledonia.

February 1.—Lord O'Hagan, ex-Lord Chancellor of Ireland—the first Roman Catholic chancellor since the Reformation—died, aged 72. He was one of the most eloquent men of the century.—The military rolls in the several states showed an aggregation of 6,580,503 men.

February 2.—A desperate engagement took place between the British troops and the Arabs.—The President informed the House of Representatives of the offer of Mrs. Grant to give the government, in trust, all the various mementoes of General Grant's career.

February 4.—The fall of Khartoum was announced, and the rumor that Gordon was killed or a prisoner. The wildest excitement prevailed in England. The English cabinet met and ordered the most vigorous measures to rescue Gordon, if alive; if dead, to punish the Arabs, and re-establish British prestige in the Soudan. —Russia and England advanced a step in the negotiations relative to the advance of the former on Afghanistan.—Telephonic communication between New York and Chicago was successfully established.

February 7.—Popular feeling against the English government for its Egyptian policy became intensified.—The Jews in Tangiers reported brutal outrages inflicted upon them by the Moors.

February 9.—England sent re-enforcements to Egypt.—The French Commander in Tonquin reported the destruction of five forts.

February 11.—The reports of General Gordon's death were confirmed. [Charles George Gordon ("Chinese Gordon") was born in 1833, left the Royal Engineers as first-lieutenant in 1854, served in the Crimean war, and was wounded at Sebastopol. He was engaged in settling the Russian and Turkish frontiers in Asia; and he served in the expedition against Pekin. Taking service under the emperor of China, he was appointed to the command of the "Ever Victorious Army," and succeeded in suppressing the Tai-Ping rebellion. By his energy, and the terror of his name, he restored order to various towns and districts; and relieved some of the richest and most fertile parts of China from the hands of brigands. He was a man of great courage, and his utter contempt of danger made him, in the eyes of the heathen, a being from whom they fled in terror, or owned his sway with reverential awe.]—Turkish newspapers were officially ordered not to publish any news from the Soudan.—The Bill conferring suffrage on women passed one branch of the Legislature by a vote of 29 to 18.—His Eminence, Cardinal McCabe, who succeeded Cardinal Paul Cullen, died after a severe and prolonged illness. He was a ripe scholar, and a severe churchman. In politics, if he professed any, he was a Whig, and was always on intimate terms with Dublin Castle.

February 12.—The French advance on Langson, Tonquin, reported three days' hard fighting.

February 13.—The English Government was charged with suppressing General Gordon's diary.—The literary world was exercised over the sale of some unpublished letters of Lord and Lady Byron.

February 14.—Egypt, on account of "no funds," was compelled to release her military prisoners.—A snow-slide buried the greater part of the town of Alta in Utah.

February 16.—A fight occurred between French and German Socialists in the streets of Paris at a funeral, the latter having refused to lower the German flag.—France concluded a treaty with Burmah.—A large crowd of unemployed working-men marched through London, causing considerable excitement.—Maj.-Gen. Sir Herbert Stewart was killed in action in the Soudan, aged 41.—The Mardi-Gras festivities at New Orleans were witnessed by over 80,000 people.—The Hocking Valley strike of eight months' duration ended.—The first of the bills proposing the retirement of General Grant failed to pass the House of Representatives.

February 17.—The study of Latin and Greek was declared not essential to admission to Harvard. The severest frost known for several years visited the States, bays and rivers heretofore free of ice being frozen over.

February 19.—The British troops in the Soudan commenced their retreat. Parliament met, and Mr. Gladstone vigorously defended and justified the policy of his administration in Egypt. The Roman Catholic Bishop of Shrewsby in a pastoral letter denounced dynamiters.

February 22.—The great obelisk, in honor of George Washington, was dedicated. [The cost of the completed monument will aggregate $1,500,000. The shaft is 555 feet high, and the entire height, including the foundations, 592 feet. The base of the obelisk is 55 feet 1½ inches square. At 500 feet above the ground it has four sides, each of which is 35 feet wide. Its area at this point is that of a comfortable six-room house, each room of which might be 12x16. It would take more than 125 yards of carpet to cover its floor. This square forms the base of the pyramidal top, which runs from it 55 feet until it terminates in its metallic point. This point is constructed of the largest piece of aluminum ever made. It is a pyramid 9 inches high, and weighs exactly one hundred ounces, being one-third as light as it would be if it were made of copper. Aluminum does not corrode, and it makes one of the best conductors of lightning. The monument is only veneered with marble, but as it is over two feet thick, it is substantial. It is 30 feet higher than any other work of man. The stones of which the monument is constructed are great blocks, in some cases 9 feet long, 2 feet thick, and 3 and more feet wide. There are more than 18,000 of them. They are of white marble, and weigh several tons each. One hundred and eighty-one "memorial stones" have from first to last been contributed for use in the monument, but only 83 were set in that portion of the shaft that was built prior to 1856. Many of the others were entirely unworthy of a place, and were rejected by the commission. Among those sent was one from the Pope, several from foreign Governments, and one from each of the States and Territories. The ceremonies attending the dedication of the monument were of the most imposing character. The procession embraced over 6,000 men, and made an unusually fine display.]

February 23.—Switzerland rejected a naturalization treaty with the United States.

February 24.—The Prince and Princess of Wales decided to visit Ireland, to the horror of the Cockney Press.—The Senate passed the Bill authorizing the President to negotiate for the purchase of the Indian rights in the Oklahoma lands.

February 25.—Switzerland decided to expel from her territory over 1,000 anarchists who sought shelter therein.—Mr. Cleveland, President-elect, urged the Democratic members of Congress to vote in favor of the suspension of silver coinage. The seal fisheries of Alaska were reported to yield to the United States Government $300,000 annually.

February 26.—The Congo Conference, under the presidency of Bismarck, held its first sitting.—The English Army estimates for the year were submitted at $89,000,000.—In the House of Representatives the clause in the Sundry Civil Appropriation Bill giving the President discretionary power in the matter of the suspension of silver coinage, was rejected.

February 27.—The motion to censure the English Government-policy in regard to Egypt was defeated in the House of Commons by the narrow majority of 14; the Parnellites voting in favor of censure.—The Secretary for War officially declared in the House of Commons that the Government would not abandon the Soudan till Khartoum be taken, and the Mahdi crushed.—The Woman's Christian Temperance Union of Trenton, N. J., dedicated its new building, costing $32,000. The House of Representatives appropriated $300,000 for the New Orleans Exposition.

March 2.—The 700th Anniversary of the Convention of the Temple Church was celebrated in London.—The Pope reached his seventy-fifth year.—Severe shocks of earthquake terrified Spain.

March 3.—Tumultuous meetings of Anarchists were held in Paris.—The New South Wales contingent left Sydney for the Soudan; the first occasion of Australian troops sharing in the defence of the British Empire.—President Arthur received, according to usage, the resignations of the members of his Cabinet. Washington was literally crammed with visitors to the inaugural ceremonies.

March 4.—Grover Cleveland, ex-Governor of New York, was inaugurated President of the United States, the inaugural address being delivered and oath administered in front of the Capitol. General Grant publicly expressed his gratification at the passage of the Bill by Congress, placing him on the retired list.

March 5.—A contractor nailed up the Parliament buildings in Quebec, and refused to allow the Legislators admittance till his unpaid claim was discharged.—President Cleveland nominated his cabinet, and held his first public reception.

March 7.—Queen Victoria invested $5,000,000 in real estate, in London.—The President's Cabinet took the oath of office.

March 9.—War was declared between Guatemala and Nicara-

gua, on account of an attempt of the president of the former to form an union of all Central American States.

March 11.—Immense excitement was caused in England over the prospects of a war with Russia, owing to the evasion of the latter of Britain's ultimatum, and the departure of Muscovite troops for Afghanistan.—Mr. Parnell urged Ireland to observe a respectful neutrality during the approaching visit of the Prince and Princess of Wales.—The British government granted $100,000 to the family of General Gordon.—The introduction of machinery for the manufacture of cigars led to serious riots in Madrid, Spain.

March 12.—Mexico declared against Barrios' proposed forced consolidation of the Central American States, and President Diaz threatened to send troops to the frontier.—The Swiss government commenced the arrest of Socialists who refused to leave Swiss territory.—Sir Curtis Miranda Lampson, Bt., well known in connection with the first Atlantic Cable, died aged 74.

March 13.—Mr. Gladstone announced in the House of Commons, that an agreement had been made between Russia and England as to peace.

March 14.—The illness of General Grant became the subject of extensive description in the public papers.

March 15.—Telephone tickets at half a franc were issued in Paris.

March 16.—The commander of the French in China demanded 10,000 men as reinforcement.—Coal was discovered in Mexico.—The largest solar eclipse since 1869 took place.

March 18.—The British government guaranteed a loan of $45,000,000 to pay off the Egyptian debt.—The ambassador from France, in China, was instructed to negotiate with China for peace.

March 19.—Woman suffrage legislation was defeated in both the New York and Connecticut Legislatures.

March 20.—The British forces encountered severe defeat near Suakim. Cork decided to ignore the visit of the Prince and Princess of Wales.

March 21.—The Humane Society of Pittsburg, O., sued the Pennsylvania Railroad for cruelty to animals in transportation.

March 22.—The Arabs were badly beaten in a battle near Suakim. Reconnoitring at Suakim by means of a balloon took place; the first ascent made in active service in the British Army.

March 23.—A number of Spanish army officers were arrested, charged with organizing a conspiracy to overthrow the monarchy.—A revolt of half-breeds, with Riel at their head, was reported from the Northwest Territory, Canada. [Louis Riel, a half-breed educated in Lower Canada, became a public character in 1869, when Manitoba was formed into a Province, and a Governor sent from Canada to rule it. Riel headed the opposition, and formed a Provisional Government, demanding a guarantee for the rights of his race. He held out for ten months, but on the approach of a force under Garnet Wolseley his forces disbanded, and he fled to the United States. The Dominion of Canada, however, accorded Manitoba representation in Parliament, and promised guarantees which have never been fully carried out. Nothing was done for the Saskatchewan half-breeds, and Riel again raised the standard of revolt, and was joined by half-breeds, Crees and Blackfeet.]

March 24.—The Rhode Island House of Representatives passed a resolution favoring an amendment to the Constitution allowing women suffrage.

March 26.—A message was read from the Queen in the House of Commons to the effect that the Reserve Forces and Militia Reserves were to be called out. This caused intense enthusiasm.—The French were defeated by the Chinese in an attack on Dong-Dong.—Lake Erie was crossed on the ice.

March 27.—The Secretary of War announced the intention of the Government to clear Oklahoma of all intruders, whether settlers or ranchmen.

March 28.—A Papal allocution was issued denouncing all diplomats who attended the laying of the corner-stone of a monument to Victor Emanuel.—Langson, in Cochin-China, was evacuated by the French.—The sculling match for the championship of the world and a stake of $5,000, took place at Sydney, New South Wales, between William Beach, of Illawarra, and Edward Hanlan, of Toronto, Canada, and was won by the former.

March 30.—The French Chamber of Deputies refused to vote the Government $40,000,000 on account of military operations in China, and the Ferry Cabinet fell.

March 31.—The half-breed insurgents in the Northwest Territory, Canada, captured the town of Battleford.

April 1.—Revolutionists burned Aspinwall, the principal city of Panama, leaving thousands of people homeless and shelterless.—Bismarck celebrated his seventieth birthday.—Battleford, Canada, was pillaged and burned by the half-breed insurgents.—General Grant was reported as dying.

April 3.—General Graham with the British troops occupied Tamai.—The United States Government despatched a force of 800 marines and war vessels to the Isthmus of Panama to protect the property of Americans, and open up communication across the Isthmus. Gold discoveries in North Carolina were reported.

April 5.—A new French Cabinet was formed.—Preparations for war with Russia progressed in England, as Russia's answer to England's demand was considered as "slimily evasive."

April 6.—Peace was concluded between France and China.

April 7.—The new French Ministry defined its policy to the Chamber of Deputies, and the latter voted $30,000,000 for operations in Tonquin. The Prince and Princess of Wales with their eldest son started for Ireland.

April 8.—The "Castle hacks" received the Prince and Princess of Wales with all honor, the citizens holding aloof. An official proclamation against the Mahdi was issued at Constantinople.

April 9.—The most frantic excitement was caused in England by the news of a battle fought between the Russian troops and Afghans near Penjdeh on the Afghan frontier. War with Russia was considered inevitable, and the Government naval and dockyards were worked at the highest pressure.—The report that Barrios was killed in an engagement in Central America was confirmed.

April 10.—Fourteen whites were killed by Indians at Frog Lake, Winnipeg.

April 11.—England, on her mettle, demanded that Russia disavow the act of her commander on the Afghan frontier and recall him. The war feeling was at its height.—General Grant was reported as much worse.

April 13.—Turkey announced her disinclination to enter into an alliance with either England or Russia.—At the Mallow Junction, Ireland, a riot occurred upon the arrival of the Prince and Princess of Wales, the people desiring "none of them," and clamoring for "Justice to Ireland" and singing "God save Ireland."—The United States Supreme Court decided that a wife's estate is not liable for the debts contracted by her husband, while pretending to act as trustee for her, unless she intended her estate to be so bound.

April 14.—Peace was proclaimed in Central America.

April 15.—A riot occurred in Cork on the visit of the Prince and Princess of Wales, the rioters being fired on by the police. Rotten eggs and decomposed cabbages were freely flung at the Royal party, who were hooted and groaned as they passed through the city.

April 18.—Primrose day was celebrated in England, so-called as being the anniversary of Lord Beaconsfield's death, the primrose being his favorite flower.

April 20.—Six hundred colored people left South Carolina for Arkansas.

April 21.—Sir Peter Lumsden's despatch in reply to the British Government's inquiry as to the correctness of the Russian accounts of the Penjdeh affair was published, and it contradicted in many particulars the Russian General Komaroff's despatch. The British Government asked Parliament for a "credit" of $55,000,000 for the Army and Navy.—Mr. Keiley, Minister to Italy, resigned. An attempt was made to blow up the University of Chicago.

April 22.—The Reserves came out strong in England, the call to arms being enthusiastically responded to.—A terrific volcanic eruption took place on the Island of Java.—The United States troops in Panama were fired upon and a proclamation directed against them. Ice 20 inches in thickness and snow drifts 10 feet high were reported in the State of New York.

April 23.—A dynamite explosion in the Admiralty Office, London, again scared the Cockneys, and the papers "went" for the United States. In Belfast the Orange section, descendants of Cromwell's Ironsides, received the Prince and Princess of Wales with the most frantic loyalty. At Stratford-on-Avon the 321st birthday of Shakespeare was jubilantly celebrated, the crowd of visitors being numerous. The Austrian Government seized upon five Vienna papers for printing objectionable political matter.—Destructive forest fires ravaged Eastern Pennsylvania and New Jersey.

April 24.—United States troops took possession of Panama, and arrested Aizpuru, commander of the rebels.

April 25.—A battle was fought between the Canadian troops and Riel's half-breeds.—Emma, Queen Dowager of Hawaii, widow of King Kamehameha, died.

April 27.—The British House of Commons, after a powerful address from the G. O. M., without a division, voted $55,000,000 for the war with Russia.

April 28.—A fleet of mackerel schooners arrived at New York with 12,000,000 fish caught off the Virginia Capes within twenty-four hours.

April 29.—The rebels at Panama surrendered.—The Police Commissioners of Cincinnatti decided to close the theatres on Sundays. The new Chicago Board of Trade opened its palatial building, which cost $2,000,000.

April 30.—Mr. Keiley, whose appointment as Minister to Italy was objected to on account of his personal opinion in regard to the Catholicity and morality of the late king, Victor Emanuel, was appointed Minister to Austria.

May 1.—Brinley Richards, the musical composer, died aged 67.

May 2.—The Exposition at Antwerp was opened with considerable flourish of trumpets.—A threatened "strike" riot in Joliet, Ill., was nipped in the bud by the interposition of the soldiery. The railway war in cut rates enabled a traveler to proceed from New York to the Pacific for $43.00.

May 4.—The World's Exhibition of Inventions, or the "Inventories," was opened in London.—General Grant resumed work on his book. The Patent-office reported that for the month of April 3,159 applications for patents were sent in.

May 5.—The Mexicans celebrated the defeat of the French, in 1862, with great *furore*, the Capital being a scene of the brightest festivity.—A treaty was concluded by the United States Government, and the Columbian Government at Bogotá, providing a joint protectorate over the Isthmus.

May 6.—The Columbian Government hanged two rebels who were prominent in the insurrection.—Cable cars were introduced into Philadelphia streets.

May 7.—James Russell Lowell unveiled a bust of Coleridge in Westminster Abbey, and delivered an address.

May 9.—Another battle was fought between the Canadian troops and the half-breeds, in which the latter were routed by General Middleton.

May 13.—A riot occurred in Trafalgar Square, London, between the police and the mob which had gathered to protest against the proposed increase of tax on spirits and beer.

May 14.—The House of Commons voted the Princess Beatrice, the youngest and only unmarried daughter of Queen Victoria, an annuity of $30.000 on the occasion of her marriage with a pauper German princeling.

May 15.—Queen Victoria was presented with the first complete copy of the "Revised Bible."—Louis Riel, the half-breed instigator of the Canadian Rebellion, was captured.

May 16.—The Revised Edition of the Bible was issued to the newspapers.

May 19.—The rebels in Columbia attacked the city of Carthagena, but were repulsed with heavy loss.—Mr. Lowell took official leave of the Queen, and Mr. Phelps "kissed hands" as the new American Minister.

May 21.—The Presbyterian General Council opened in Cincinnatti.

May 22.—Victor Hugo, French author, poet and dramatist, died aged 83. [He was the youngest of three sons of General Hugo, who served with distinction through Napoleon's campaigns in Italy and Spain. Madame Hugo and her children followed the General into both countries. Thus their early years were spent amid strange sights and scenes, following the fortunes of war. The first volume of Victor Hugo's "Odes and Ballads" appeared in 1822, and his tales, "Hans of Iceland" and "Bug-Jargal," were written about this time. In 1826 he published a second volume of "Odes and Ballads," which exhibited a change in his political and literary opinions, and in 1827 he composed his drama, "Cromwell." In 1829 he published his "Last Days of a Condemned Criminal." Shortly after the Revolution of July 1830, his "Marion de Lorme," which had been suppressed by the censorship under the Restoration, was brought out with success. "Le Roi s'amuse" was performed at the Théâtre Francais in January, 1832. After the *coup d'état* of 1851, Victor Hugo refused the amnesty offered by Napoleon III., rejected with scorn the triumph of Imperialism, and went into a voluntary exile for nineteen years afterward at Guernsey. His prose works during this period included "Les Misérables," "Les Travailleurs de la Mer," "L'Homme qui Rit," and "Quatre-vingt Treize"; his poems, "Napoléon le petit," "Les Châtiments," "La Légende des Siècles," "Chansons des Rues et des Bois," and "Les Contemplations." On the fall of the Empire he hastened back to his native country, and was returned to the National Assembly at Bordeaux. He then sought refuge in the seclusion of the little town of Vianden, in Luxemburg, where he composed "L'Année Terrible." Returning to Paris in July, 1871, he pleaded earnestly for the lives of Rossel, Ferré, and the other Communists. M. Victor Hugo has given an account of this period of his career in "Actes et Paroles, 1870–71–72," published in 1872. Collections of his lyrics, which were published from time to time, bore the titles: "Les Rayons et les Ombres," "Les Voix Intérienres," "Les Feuilles d'Antomne," "Chants du Crépuscule," etc. Victor Hugo's literary works brought him a moderate fortune, and his latter years were spent in a pleasant house on the outskirts of Paris, in an avenue named in his honor.]

May 27.—The Supreme Court of Mexico decided that foreigners may hold property in the Republic.—The Mikado of Japan conferred honorary titles on four American citizens, for services rendered as teachers in the University of Tokio.—A Philadelphia woman was convicted of being a "common scold," and sentenced to four months' imprisonment.

May 28.—The President and Cabinet refused to encourage the re-opening of the New Orleans Exhibition in the fall.

May 30.—The Apache Indians committed atrocities in Arizona. Great excitement was caused by the discovery of a gold mine in Josephine County, Oregon.

June 1.—The funeral of Victor Hugo took place in Paris. He was interred in the Pantheon. The cortegè and ceremonial was one of the most imposing ever witnessed in "glittering Lutetia."

June 2.—A terrible earthquake occurred in Cashmere, India.—The mayor of Chicago issued a proclamation against gamblers and gambling in that city, which caused a sensation.

June 4.—The British House of Commons was greatly exercised over the question of diplomatic relations with the Vatican, and the Government announced that it was not their intention to establish same in a regular way.—A motion in the French Chambers impeaching M. Ferry was defeated.—A cyclone in Aden, Arabia, committed fearful havoc.—In Arizona and New Mexico the hostile Indians were on the war path.

June 5.—Sir Julius Benedict. Kt., musical composer, died, aged 81.—Ferdinand Ward, "the Napoleon of finance," was indicted for fraud.

June 6.—Cashmere was again desolated by an earthquake.

June 7.—There was a great demonstration in Hyde Park, London, to protest against an increase in the beer and spirit duties.

June 8.—Mr. Gladstone was defeated in the House of Commons on the proposition to increase the tax on wine and spirits. The excitement in England was at fever heat.—The treaty of peace between France and China was signed.—The newspapers published the first extracts from General Grant's memoirs.

June 9.—The Gladstone Ministry resolved upon resignation, to the utter dismay of the Liberals, and the intense satisfaction of the Conservatives and Parnellites.

June 10.—A fire at Aux Cayes, Hayti, destroyed $2,000,000 worth of property, and rendered over one thousand families homeless.—The supporters of Prince Napoleon issued an election Manifesto, declaring war against "Republican Anarchy."

June 11.—Queen Victoria summoned the Marquis of Salisbury to Balmoral with a view to commanding him to take office and form a Ministry.

June 12.—The Marquis of Salisbury consented to form a Ministry; this after considerable hesitation. The town of Grodno, Russia, was destroyed by fire.

June 15.—The Shah of Persia started a school and a newspaper.—Prince Frederick Charles of Prussia, "The Red Prince," died aged 57. [Prince Frederick Charles of Prussia, better known as "The Red Prince," was the son of Prince Frederick Charles, who was a brother of the present Emperor of Germany. He was born March 20, 1828. He married, November 29, 1854, the Princess Marie, daughter of Leopold Frederick, Duke of Anhalt. His children: 1. Princess Marie, born September 14. 1855. married, August 24, 1878, Prince Henry of the Netherlands. 2. Princess Elizabeth, born February 8, 1857, married, February 18, 1878, the Hereditary Duke of Oldenburg. 3. Princess Louise, born July 25, 1860, married, March 13, 1879, the Duke of Connaught; and 4. Prince Joachim, born May 14, 1865.]

June 16 —Cholera appeared in Spain. Its malignity spreading terror over the Peninsula.—Another shock of earthquake was experienced at Cashmere, and 2,000 people were reported as killed.

June 17.—The New British Cabinet was announced, and Lord Randolph Churchill being given a portfolio, created at once satisfaction and surprise.—The Bartholdi Statue of "Liberty Enlightening the World" arrived at New York.

June 18.—A Cabinet crisis in Italy led to the resignation of the Ministry.—A shock of earthquake was severely felt at York, England.—The increase of cholera in Spain was most serious.

June 19.—The Statue of "Liberty Enlightening the World" was formally received in New York, [It is estimated that, of the $390,000 that will have been expended before the statue is finally placed in position, the pedestal alone will have cost $250,000, the interior bracings and structure $25,000, and the placing it in position, $25,000. This will make total cost of statue, pedestal and erection about $650,000, or over half a million. The pedestal is a truncated cone, with galleries on each side supported by Ionic columns. The top of the torch will then be 305 feet 11 inches above low water, 21 feet higher than Trinity Church spire, and 23 feet higher than the towers of the Brooklyn Bridge. Some approximate idea of the size of the statue may be gained when it is stated that the forefinger is nearly 7 feet long, and is over 4 feet in circumference at the second joint. The nail measures 9 by 6 inches, the head is 16 feet high, and the eye is nearly 2 feet wide. Three feet and over is the length of the nose; forty persons can find room inside the head, and twelve in the torch held by the hand.]

June 20.—A shock of earthquake was felt in Switzerland.—The Spanish Ministry tendered their resignation in consequence of the King's determination to visit the cholera-stricken districts.

June 23.—The Salisbury Ministry formally entered office, the Marquis having received the seals from the Queen.

June 24.—The Russian Government forbade newspapers from making any reference to its action in Afghan affairs.—The decree of the Mexican Government regarding payment of duties and railway subsidies caused a financial crisis.—The second case of whipping for wife-beating took place in Maryland.

June 25.—The ravage of disease among the French soldiers at Tonquin was reported as appalling.—A severe shock of earthquake was felt in Inverness-shire, Scotland.

June 26.—The financial embarrassment of the Mexican Government was officially reported.

June 27.—The Rev. Mr. Spurgeon published a pamphlet denouncing immorality in English high life.—The death-rate from cholera in Spain was enormously increased.—Three hundred natives of the Republic of Nicaragua fell in battle.

June 30.—The Nationalist Parliament party issued an address advising Irish electors to vote for Conservatives for Parliament with a view to the promotion of Irish interests.

July 1.—The English Cabinet decided to abandon coercion in Ireland.—Ice and snow appeared in Southwestern Virginia.

July 2.—500 Mormon converts arrived in New York.

July 3.—400 policemen guarded the cars and property of the Chicago Street Railway from the strikers.

July 4.—The Province of Murcia, Spain, was reported as depopulated by cholera.

July 5.—Cholera appeared in Toulon and Marseilles, France.—The *Pall Mall Gazette*, London, published revolting and sensational details in regard to the licentiousness of London.

July 8.—Feverish excitement prevailed in Mexico in consequence of the Government's financial troubles, and several arrests were made.—General Grant received a visit from a deputation of Mexican editors journeying in the United States.

July 9.—The University College of Wales was burned at a loss of $200,000.

July 10.—The French Chamber of Deputies made an appropriation of $800,000 to be expended in educating every seventh child born in French families, where such aid might be needed.—The President ordered General Sheridan to go in person to the scene of the Indian troubles in the Indian territory.

July 11.—Great damage was done in Southern Hungary by floods.

July 13.—The New Orleans Exposition property was sold at auction for $175,000.

July 15.—The grounds around and about the Falls of Niagara were formally opened as a public park.

July 23.—The Princess Beatrice was married at Whippingham Church, Isle of Wight, England, to Prince Henry of Battenberg, a penniless German princeling.—Ulysses S. Grant, the conqueror of the American Rebellion, ended his career at the age of sixty-three, at Mount McGregor, New York, and his character now stands for the judgment of history. [Ulysses S. Grant was born at Point Pleasant, Clermont County, Ohio, April 27. 1822; graduated at the military academy of West Point in 1843, and served under General Taylor in the war with Mexico, 1846, up to the capture of Monterey. His regiment was then transferred to the expedition under General Scott, and he took part in every action from Vera Cruz to Mexico, and was brevetted first lieutenant and captain for meritorious conduct at Molino del Rey and Chapultepec. In 1852, he served in Oregon; but, in 1854. resigned his commission, and settled at St. Louis, Missouri, whence, in 1859, he moved to Galena, Illinois, and engaged in the leather trade. At the breaking out of the rebellion he returned to the army and served as colonel, rapidly advancing to the chief command of the United States Army. He was twice elected President, and one of the most memorable events of his administration was the settlement of the Alabama question in 1871.]

July 24.—The President issued a proclamation declaring void the Cheyenne and Arapahoe Indian territory leases to cattlemen, and requiring the latter to remove within forty days.

July 28.—Sir Moses Montefiore, the illustrious Hebrew philanthropist, died at his home in Ramsgate, England. He had reached the patriarchal age of one hundred years. [The Montefiores were originally from Spain. Driven from that country they took refuge in Italy, where they amassed wealth. After Manasseh-ben-Israel's intercession with Cromwell for the admission of Jews to England, they took up their residence in that country. Moses Montefiore, the son of Joseph Elias and Rachel Montefiore, was born in Leghorn, Italy, October 24th, 1784, during a visit of his parents to that place. At an early age he entered commercial life in London, becoming first a clerk, and afterward a stockbroker. In 1824 the

death of his father left him in possession of a considerable fortune, and a year later he retired from the Stock Exchange. Early in life his heart had been touched by the miserable condition of his people, the Jews, abroad, and he had long nurtured plans for redressing it. Sir Moses Montefiore was elected Sheriff of London in 1837, and soon after was knighted by the young Queen who then came to the British throne; and the honors he received from royalty in many lands indicate that he possessed a charm of character which won the hearts of all classes. In his munificent benefactions he knew no race distinctions, and it was his gift of $1,000 which started the fund of $110,000 for the relief of the Christians on Mount Lebanon a quarter of a century ago.]

July 30.—The half-breed Riel was put on trial.—Maude S. trotted a mile in a half second less than ever before, doing it in 2:08¼.

July 31.—The Pope created a batch of Cardinals.

August 1.—Riel was found guilty and sentenced to be hanged on September 18.

August 4.—A religious service in memory of General Grant was held in Westminster Abbey.

August 6.—The Emperor's of Germany and Austria met at Gastein.

August 11.—The Spanish Government received information of a plot to assassinate King Alfonso.—A re-union of Federal and Confederate soldiers took place on the field of Gettysburg.

August 14.—The British Parliament was prorogued. The Crimes' Act in Ireland expired.

August 20.—The occupation of the Caroline Islands by Germans caused much excitement in Spain.

August 22.—China contracted with an English firm to construct 100 miles of railroad, giving Pekin direct communication with the sea.—The new Cunard Steamship Etruria made the fastest ocean voyage yet recorded, six days, five hours, and twenty-one minutes.

August 23.—One thousand eight hundred and nineteen deaths in one day from cholera, were reported from Spain—the highest record.

August 25.—The Emperors of Russia and Austria met at Kremsier.

August 29.—The peasants of South Germany were thrown into consternation by the sudden and inexplicable departure of the rooks, that for centuries had made their abode there.

August 31.—An official announcement was made that of 223,546 persons attacked by cholera in Spain, 82,619 had died from the epidemic.

September 1.—A modified commercial treaty was agreed upon by the United States Minister and the Spanish Government.

September 7.—The new and patriotic Archbishop of Dublin, Dr. Walsh, was installed. His Grace is a very prodigy of learning, and is a young man. The Whigs were in favor of an Archbishop of the McCabe type, but the Parnellites prevailed at Rome and "elected their man."

September 8.—The deaths from cholera in Spain were reported as being rapidly on the decrease.

September 10.—The highest tide of the year was experienced on the British coast.—The Society of the Army of the Tennessee held a great meeting at Chicago.

September 13.—Small-pox broke out in Montreal, Canada, 48 deaths being reported.

September 14.—Riel was respited.—After four abortive attempts the first International Yacht Match took place off New York, the American yacht Puritan beating the English yacht Genesta.

September 15.—Jumbo, the famous elephant, was killed by a freight train at St. Thomas, Ontario.

September 17.—A wondrous hail storm took place near Granite Falls, Minn., the stones being ten inches in thickness.

September 18.—A revolution took place in Eastern Roumelia. The Governor-General was placed under arrest and allegiance was sworn to Prince Alexander of Bulgaria.

September 20.—A monster Socialistic meeting was held in London, England, and several of the speakers were arrested.

September 22.—Three hundred lives were lost by a cyclone which swept over the Bay of Bengal.

September 23.—Bismarck accepted Spain's apology for an insult to the German Embassy at Madrid.—A fearful crush opposite the hotel in Stockholm, where Madame Nilsson, the prima donna, was stopping, resulted in nineteen persons being killed and fifty injured.—United States war vessels arrived at New York with silver to the amount of $10,400,000 on board.

September 28.—The deaths reported from small-pox for a week at Montreal numbered 325, and an attempt to enforce compulsory vaccination produced a riot, the rioters making an assault on the Board of Health.

September 29.—The Militia was called out to suppress the mob in Montreal.

September 30.—Great and destructive floods were reported from India and from Switzerland.

October 1.—The daily vaccination at Montreal was reported at 3,000.—The first female law student entered Yale College.—The system of sixpenny (10 cent) telegrams came into operation in Great Britain. The Earl of Shaftesbury died, aged 84. [Anthony Ashley Cooper, K.G.D.C.L., 7th Earl of Shaftesbury, was born on the 29th of April, 1801, of a family which for three hundred years has claimed kindred with the greatest in England. His mother was a daughter of the Duke of Marlborough. Under his then title of Lord Ashley he was sent to Harrow and then to Oxford. At the age of twenty-five he entered Parliament as member for Woodstock, and afterwards represented Dorchester and Bath. In 1851 his father died and he took his seat in the House of Lords. In 1828 he was connected with the Board of Control, in 1834 one of the Lords of the Admiralty, and an Excise Commissioner from 1841 to 47. He married, in 1830, Lady Emily, eldest daughter of Earl Cowper, who died in 1872. Lord Shaftesbury's whole term of service in the two chambers was fifty-six years. He leaves four sons and two daughters. His life has been one of vast usefulness, and his name long honored by the most virtuous and intellectual people of the civilized world.]

October 3.—A conference was held in Constantinople on the Roumelian question.—A great demonstration took place in Manchester to celebrate the passing of the Manchester Ship Canal Bill. This canal will connect Manchester with Liverpool.

October 6.—Another riot occurred at Montreal.

October 7.—The Abysinian army, marching to the relief of Kassala, in the Soudan, encountered Osman Digma and defeated him, killing 3,000 of his dervishes.

October 8.—A great fire occurred in the city of London, causing a loss of $15,000,000.—The Patent Office reported that during the fiscal year ended June 30th, 35,688 patents were applied for.

October 9.—Shocks of earthquake startled Virginia.

October 10.—"Hell Gate Rock," New York Harbor, covering nine acres, was exploded with 285,000 lbs. of dynamite and rack-a-rock. [After the destruction of Hallett's Reef a few years since, work was commenced on Flood Rock, which was the great remaining obstacle to navigation. The rock was honeycombed with cartridges, and the explosion was entirely satisfactory to Gen. Newton, the engineer. Scientific observations were made as to the effects of the concussion, and as far away as Massachusetts the shock was felt and the exact time recorded. The clearing away of the débris (now being done) will make a channel 26 feet deep and 1200 feet wide.]—Three shocks of earthquake were felt in Virginia.—His Eminence, Cardinal McCloskey, Cardinal Archbishop of New York, died aged 75. [Cardinal John McCloskey was born in Brooklyn on March 20, 1810. At the age of seven he was sent to Mount St. Mary's College, at Emmetsburg, Md., where he supplemented his classical education by a course of theology at the seminary of that place. He was ordained a priest in 1834. Two years later he went to Rome and spent two years at the convent of St. Andreás della Vallée. While there he became intimate with Cardinal Wiseman, then rector of the English College, and Cardinal Cullen, rector of the Irish College. Upon returning to New York he was appointed assistant pastor at St. Patrick's Cathedral; in 1838 he was appointed assistant pastor of St. John's, and in 1841 he was nomi-

nated by Archbishop Hughes president of Fordham College, much against the wishes of his parishioners; but he returned in a year to St. John's, after skilfully commencing the organization of the new college. On the 10th of March, 1844, Father McCloskey was consecrated titular bishop of Atière and coadjutor to the Bishop of New York. In 1847 the diocese of New York was divided, and on the 21st of May of the same year Bishop McCloskey was translated to the see of Albany, and made its first bishop. Albany at that time contained only three churches. During the years that Bishop McCloskey spent there he accomplished much for the cause of religion, churches were built, and institutions organized. But the Bishop's greatest achievement was the erection of the imposing Cathedral, the corner-stone of which was laid in 1848 by Archbishop Hughes. In 1851 Bishop McCloskey visited Rome. In 1864, when Archbishop Hughes died, Bishop McCloskey was appointed his successor. His departure from Albany occasioned gloom and sorrow there, where he was much beloved. He did for New York what he had accomplished for Albany. Churches and institutions sprang up like magic under his fostering and beneficent care. To him the Catholics of New York are indebted for the Westchester Protectory, a Foundling Asylum in 68th Street, a Deaf and Dumb Association at Fordham, and Homes for destitute children and aged people. He established various religious communities composed of Dominicans, Franciscans, Capuchins, and the Little Sisters of the Poor. He also devoted himself untiringly to bring to a successful completion Archbishop Hughes' conception of the present stately Cathedral of St. Patrick on Fifth Avenue. March 15, 1875, was a memorable day not only in Archbishop McCloskey's career, but also in the history of the Roman Catholic Church in America, for on that day he was appointed a Cardinal by the Pope. Archbishop McCloskey received the news of his elevation to this high dignity with the modesty and humility which had always formed a striking part in his character. The investure took place on April 27, 1875, in Old St. Patrick's in Mott Street. The scene at this ceremony was marked by a religious pomp and magnificence never before witnessed in this country. A short time afterwards Cardinal McCloskey went to Rome, where he was received with great distinction by the Pope. After the completion of the new Cathedral, a marble residence was erected on the grounds, and there the Cardinal has passed his declining years in seclusion, seldom mixing in social life, except by an occasional summer trip to Newport, R. I. On the 12th of January, 1884, the fiftieth anniversary of his elevation to the priesthood was celebrated at the Cathedral with impressive ceremonies. From that time till his death his health failed gradually, when his useful life was brought to a close, and he peacefully expired in the presence of many of the sorrowing clergy. He was a man to compel attention even in a multitude, not through any mere physical endowment, but by the quiet gravity of his demeanor, and the ascetic though singularly benign cast of his features. The mold of his face was Irish, and his eyes were blue and piercing. During his long career in the Church he commanded the respect of non-Catholics by his blameless life, and firmly rooted himself in the affection of every Catholic heart. He is succeeded by the Most Rev. Michael Augustine Corrigan, Titular Bishop of Petra, who was appointed his coadjutor a few years since.]

October 12.—Reserves were called out in Greece, and Servia was at a war-fever heat.

October 13.—The body of Cardinal McCloskey lay in state at St. Patrick's Cathedral, and was visited by thousands.

October 15.—The reported death of Osman Digma was confirmed.

October 21.—An attempt to wreck street cars in St. Louis by dynamite was frustrated by discovery.

October 22.—The British Privy Council refused to reverse the sentence of death passed on Riel by the Canadian Court.—Prince Waldemar of Denmark was married, at the ancient Castle d'Eu, to Marie Amélie d'Orleans.

October 24.—A prairie-fire in Texas swept over 500,000 acres.

October 27.—A terrific storm devastated Labrador.

October 28.—The Great Eastern Steamship, that laid the first Atlantic cable, was sold for $130,000.

October 29.—An attempt was made by one Corsi to assassinate De Freycinet, French Minister of Foreign Affairs, while riding in his carriage in the streets of Paris.—General McClellan (Little Mac) died aged 58. [George B. McClellan was born at Philadelphia in December 1826. In his 16th year he was sent to the United States Military Academy at West Point, where he graduated with high honors in 1846, and joined the army as second lieutenant of engineers, to take an active part in the Mexican war, where he distinguished himself. In 1861 he was made commander-in-chief and reorganized the Army of the Potomac. In 1864 he was the Democratic candidate for President, but was defeated by Abraham Lincoln. In 1877 he was elected Governor of New Jersey. He has published several military papers.]

October 30.—Senator Stanford set aside $3,000,000 to endow an university at Palo Alto, Cal.

October 31.—Ferdinand Ward, the "Napoleon of Finance," was sentenced to hard labor in the Penitentiary for ten years, and taken to Sing Sing prison.

November 2.—The British forces marched against Burmah.—The remains of General McClellan were interred at Trenton, N. J.

November 3.—The monument erected at Tappan-on-Hudson to Major André by Cyrus W. Field was blown to pieces by dynamite.

November 4.—A determined crusade against the Chinese in Washington Territory and elsewhere on the Pacific coast was inaugurated.

November 7.—President Grévy refused to accept the resignation of the French Cabinet.

November 9.—The International Inventions Exhibition, London, was closed, the total number of visitors who attended was 3,760,581.

November 10.—War with Burmah was formally declared by Great Britain.—The New Orleans Exposition was re-opened.

November 11.—The Balkan Conference agreed that the basis of its deliberations should be a restoration of affairs that existed before the Roumelian Revolution.

November 13.—A great fire swept over Galveston, Texas, destroying fifty blocks, and causing damage to the extent of $3,000,000.—The business failures in the United States during the year ending October amounted to 9,627.

November 14.—The Ruler of Servia at the head of his troops marched into Bulgaria.

November 16.—Louis Riel, the Half-breed leader, was hanged for high treason at Regina, Northwest Territory.

November 17.—A battle of eighteen hours' duration was fought between the Servians and Bulgarians near Slineratz.—The British Parliament was dissolved.

November 20.—The town of Helena, Ark., was visited by a deluge of grasshoppers.

November 21.—A tornado swept over the Philippine Islands, causing immense destruction of life and property.

November 23.—The most exciting Parliamentary elections of modern times commenced in Great Britain.

November 24.—The Chamber of Deputies, France, recommended the evacuation of Tonquin and Madagascar.

November 25.—Alfonso XII., King of Spain, died aged 28. [Alfonso XII. was born Nov. 28, 1857. On Dec. 29, 1874, General Martinez Campos proclaimed him King of Spain in Valencia, and a few days later Alfonso, who had gone over to Paris in order to spend the *Jour de l'An* with his mother, left France for Spain, arriving at Madrid Jan. 14, 1875. He was most enthusiastically received. On Feb. 16, 1876, he departed from Madrid to take command of the troops operating against the Carlists, and on the 20th of the following month he returned in triumph to the capital at the head of 25,000 men, having subdued the Carlist insurrection. In 1878 he married his cousin, the Princess Mercedes, who died June 26th of the same year. King Alfonso married secondly, in 1879, Maria Christina, who bore him two daughters. His life was attempted on Dec. 30, 1879.]—Thomas A. Hendricks, Vice-President of the United States, died aged 66. [Thomas Andrews Hendricks, born in Ohio, Sept. 7, 1819; removed, when a child, with his father, to Shelby Co., Ind.; graduated from South Hanover College in 1841; and was admitted to the bar in 1843. He engaged actively in politics, and soon became one of the leaders of the Democratic Party in Indiana. He was a member of Congress, 1851–55; U. S. Senator, 1863–69; and in 1872 was elected governor of Indiana. In 1876 he was the Democratic candidate for Vice-President, with

Samuel J. Tilden for President, but was defeated. In 1884 he was again nominated for the same position, with Grover Cleveland for President, and was elected. Mr. Hendricks has for years been recognized as one of the ablest and most influential men of his party.]

November 26.—The Servians sent a flag of truce to the Bulgarians, which the latter refused to accept unless their country was evacuated.

November 27.—The Bulgarians were repulsed by the Servians at the battle of Widdin.—Mr. Gladstone was returned as member for Midlothian, Scotland.

November 28.—Mr. Jay Gould announced his intention of retiring from business as a speculator.

December 1.—The British troops occupied Mandalay, the capital of Burmah.—A battle was fought at Lima, Peru, the war continuing.—A convention of Knights of Labor was held at San Francisco to arrange a systematic anti-Chinese agitation.—Vice-President Hendricks was interred.

December 3.—King Thebaw of Burmah offered to abdicate if his life was spared.

December 4.—The British defeated a force of 4,000 Arabs in the Soudan.

December 7.—Hard fighting between the Servians and Bulgarians was reported.—Senator John Sherman was elected president *pro tem.* of the Senate.

December 8.—The Queen Regent of Spain announced her intention of pardoning all political offenders.—William H. Vanderbilt dropped dead, aged 64. [The great millionaire William H. Vanderbilt was born at New Brunswick, N. J., May 8, 1821, the Commodore, his father, being at that time engaged in a steamboat enterprise which required his residence in New Jersey. The young Vanderbilt spent his early years, a roystering gamin, playing about the Vanderbilt homestead on Staten Island. He got such schooling as the Island afforded, and at twelve years was placed in the Columbia College Grammar School, under Dr. Anthon, and for six years got a good academic training there. He was then placed by his father as a clerk in the banking house of Drew, Robinson & Co., of Wall street, then one of the largest firms operating in the market. Two years of clerking broke down his health, and to fend off the chronic dyspepsia which threatened, the physicians ordered an out-door life. The father purchased a seventy-five acre farm on Staten Island and set his son, just of age, upon it. He had already married a Miss Kissam, daughter of a New York clergyman, and the young couple were living very comfortably on a $16 weekly salary. The farm-life was hard—the farm practically a stony desert. He soon felt the need of capital. He knew he could use it to advantage, but he did not dare to ask for a loan from the already abundant store of his father. A friend asked the favor of a $5,000 loan on behalf of the young man, only to meet a flat refusal from the Commodore. This led to a mortgage of $6,000 being placed on the farm. William made of farming a success. His farm grew to one of 350 acres, and he found profit and pleasure in the raising of fine stock, and got that close knowledge of horseflesh which was one of the passions of his life. The Staten Island Railroad was suggested, and Wm. H. Vanderbilt became, with his uncle Jacob, largely instrumental in starting this venture, and in 1856 the road was built, skirting the eastern shore from Vanderbilt's Landing. It was a great public convenience, and when it went into bankruptcy Mr. Vanderbilt became receiver. In two years he had settled all the debts, had put the road on a paying basis and established a regular ferry to New York. He had become fully identified with his father's growing enterprises, and in every way began to prepare himself to succeed the Commodore. He became in 1865 Vice-President of the New York and Hudson River road, and upon the consolidation with the Central in the following year he was made Vice-President of the united company. He had already been made Vice-President of the Harlem road, and from that time on father and son worked together to build up the greatest railroad property in America. With the close of the will contest Wm. H. Vanderbilt found himself in undisputed possession of the great railroad properties which had been built up by his father, and he pushed them with vigor in every direction. The railroad system which came under his control, as it had been in fact before the Commodore's death, included not only the New York Central and the Harlem, but the Lake Shore and Michigan Central, and they became a virtual entity as the "Vanderbilt system." Subsequently he went into telegraph stock and had a vast interest in the Western Union Company, while in the Union Pacific his holdings were very large. In his enterprises he used an army of men as agents and executive officers, but his advisory board consisted of James H. Rutter. E. D. Worcester and Chauncey M. Depew, with his son Cornelius in later years. While he was a hard worker he was also a generous liver and his former home at Fortieth street was one of the most luxurious on Fifth Avenue. His summers were spent at the old Pavilion Hotel at Sharon Springs and at the United States Hotel at Saratoga. He was accustomed in later years to take summer flits to Europe, and his last run over was a round trip on one of the White Star steamers, running up from Queenstown to Killarney while the steamer was running to Liverpool, and embarking again on its return to Queenstown. He often said that he found the ocean steamers good enough yachts for him when urged to allow his love for out-door life to lead him into yachting. In his family relations Mr. Vanderbilt has been very happy. He has had nine children, of whom eight survive him, four sons—Wm. K., Cornelius, Frederick and George—and four daughters, all of them married.]

December 10.—The King of Burmah was sent to Madras.

December 11.—It was announced that the British Government would send a new expedition to the Soudan.—France denied the report of an alliance with Burmah.

December 12.—The bi-centennial of printing in America's Middle Colonies was celebrated at Philadelphia. A plot organized for the assassination of some of San Francisco's most prominent citizens was exposed.

December 17.—Mr. Gladstone declared himself favorable to a "certain measure" of Home Rule.

December 23.—Greece complained that the great powers make her no reparation for injuries sustained.—Capitalists from Berlin decided to send delegates to China with a view to negotiating with the Government in the matter of establishing a railway system throughout the empire.

December 24.—The purchase of 800,000 barrels of oil in Oil City by a single speculator, nearly paralyzed the oil trade.

December 27.—The "Lady Stitching Union" of Lynn, Mass., composed of 3,000 women, demanded an increase of wages, and their demands were complied with.

December 28.—Consequent upon a fierce contest M. Grévy was re-elected President of the French Republic.

December 30.—The British troops after a desperate fight defeated the Arab troops in the Soudan. Monsieur Pasteur's method of treating hydrophobia was taken up by the incorporation of the American Institute of Hydrophobia.

December 31.—The year 1885 died uneventfully, and went to its rest as quietly as the sun sets.

APPENDIX.

A SYNOPSIS OF THE PRINCIPAL EVENTS ALL OVER THE WORLD FROM JANUARY TO JUNE, 1886.

January 1.—Hon. David B. Hill inaugurated Governor of the State of New York. Southern rabbis meet at New Orleans. 35,696 deaths, 30,038 births, and 11,716 marriages in New York City during 1885. 7,070 of the brides and 6,323 of the bridegrooms of foreign birth. Two women and three men married for a fourth time, thirty-four women and ninety-six men were married for a third time, while 1,242 of the brides and 1,590 of the bridegrooms had had a single previous experience in matrimony. The total loss by fires in New York during the year $3,800,000, and the police in the same time made 74,373 arrests, 54,883 being those of men. During the same period 5,627 dwellings and twenty-one churches built in Philadelphia: loss from fires $1,586,972.75.—Telegraphic despatches announce a treaty between France and Madagascar. After a year and a half of warfare, a treaty has been made, under which France virtually abandons all her pretensions to a protectorate, and acknowledges the ruler of the Hovas as sovereign of the whole island.—In Peru, as the result of the triumph of the revolutionists, a Council of State is formed, with Dr. Antonio Arenas as president, and a full cabinet, and, pending the election of a president and other officials under the Constitution of 1860, the country becomes quiet, with a prospect of a final restoration of an orderly and stable administration.—The Rt. Hon. T. D. Sullivan, author of "The Wearing of the Green," installed Lord Mayor of Dublin.—Burmah annexed to the British Indian Empire.—The creditors of the King of Bavaria sue his majesty.—The German army counts 161 regiments of regular infantry, 20 battalions of light infantry, 93 regiments of cavalry, 37 regiments of artillery with 341 batteries of six guns, and 19 battalions of pioneers, making a total for the regular army of 1,263,746 men. The garrison troops and Landsturm amount to 809,847 men.

January 2.—China proposes to incur a debt of $175,000,000 to build railways and increase her armament.

January 3.—Kaiser William's jubilee celebration of his accession to the throne of Prussia.—Crisis in the French cabinet on the vote on the Tonquin credit. Disappointed at the meagreness of the government's majority on that occasion, Premier Brisson tenders to President Grévy his resignation, together with that of the whole Cabinet.

January 4.—First performance of the American Opera Company a success. The Enoch Pratt Free Library at Baltimore formally opened. [The sum of $1,145,833 contributed by Mr. Pratt for the library and its uses: 20,000 names of readers already entered on the list. Enoch Pratt a member of the firm of Pratt & James, iron merchants. He rose from a poor boy to a millionaire, and he has still some millions besides his big gift to Baltimore.]—M. de Freycinet forms a new cabinet. A photograph of a section of the sky, taken at the Paris Observatory, some five degrees square, shows three thousand stars on a ten-inch square plate. This would indicate that there are twenty million stars up to the fourteenth magnitude, inclusive.—The application of automatic brakes to freight trains greatly exercises railway men.—Despatches announce that the British troops in Egypt have won a decisive victory over the rebels, who have for some time menaced the garrison at Kosheh, midway between El Obeid and Cairo. The successor of the Mahdi now holds the Nile Valley and surrounding country from Kosheh to Khartoum, and southward, and since the fall of Khartoum he has been moving cautiously northward with the avowed intention of invading Egypt.—Rumors rife to the effect that Servian troops have violated the armistice by attacking a Bulgarian frontier village, not confirmed; another, stating that Russia and Austria are secretly arming.—The inhabitants of the island of Crete petition the powers to liberate the island from Turkish domination.

January 5.—President Cleveland writes to ask that he may be allowed to assist in the erection of the proposed monument to the late Vice-President Hendricks.—Mr. Gladstone declines an invitation to visit America.—Gounod composes a mass in honor of Joan of Arc.

January 6.—Judge Powers, of the United States court, decides that citizenship must be refused to all persons who are not prepared to make oath that they regard the laws of the United States as supreme. This decision prevents the naturalization of Mormons who hold to polygamy, and makes it impossible for them to vote or act on juries. Mr. Pendleton, U. S. Minister, induces the German government to rescind its order for the expulsion of Americans from the island of Foehr.—King Humbert burns the letters of Victor Emmanuel to the Countess Miraflori.—Labor troubles in the north of England.

January 7.—The work of widening the Suez Canal delayed owing to the refusal of the Egyptian government to sanction a modification of the treaty.—The total cost of the military expeditions to Suakin, Egypt, according to an official statement issued in England, $17,727,415.—The Pope urges the Spanish bishops not to engage in politics.—The Princess of Wales seriously ill.—A massacre of Christians at Annam.

January 8.—A blizzard in the Northwest. Ice carnival at St. Paul, Minn., begun. Opening date of the American exhibition in London changed to May 2, 1887. A record of the railroad-building of the year 1885, shows the total length of main lines laid in the United States 3,113 miles, about 700 miles less than in 1884, and less than in any year since 1878, when the total was but 2,687 miles. The building permits issued in Chicago during the year 1885, represent a value of $19,062,570, and cover the construction of 342 flats, 2,413 dwellings and 38 factories, besides stores, offices, barns, etc. Permits were issued for the construction of 106 buildings to cost over $50,000, and two to cost $500,000 each.—The telegraph system of the British Islands, under control of the Post Office, amounts to 156,000 miles, and employs 17,000 instruments. The standard rate is twelve words for a sixpence, address included. Press messages alone now average a million words a day. Great storm on the north coast of Great Britain. The Loyalist Union resolves to establish branches of the Union throughout Ireland. Emperor William decorates Cardinal Jacobini for his services in connection with the settlement of the Carolines.—The war fever subsides in Greece.

January 9.—The Cherokees protest against the settlement of their lands by white people, and denounce the proposed scheme as one of spoliation. The great strike of the coal-

miners in the Monongahela Valley, initiated on the 3d of March, 1885, ends, the men going to work at the rate of wages offered from the first by the employers. The orange crop in Florida destroyed by frost.—It is rumored that the half-breeds of the northwest propose avenging the late Louis Riel.—The Queen announces her intention of opening Parliament in person.—The Anglo-Spanish protocol concerning the Caroline Islands signed.—The Marquis of Salisbury proposes a scheme to buy out the Irish landlords.—The return of Prince Alexander to Sofia, his capital, at the head of a part of his victorious army, marked by a popular ovation. Russia insists that Turkey fulfil the article in the Berlin Treaty providing for religious reforms in Armenia. The partisans of Senor Zorilla, in Spain, urge a revolution against the Government. A revolutionary conspiracy discovered at Ciudad Real.—The annexation of Burmah to the British Empire formally proclaimed. England cedes to China part of Upper Burmah in order to make the Chinese and Indian frontiers contiguous.

January 10.—Greece makes overtures to Montenegro for the formation of an alliance both offensive and defensive against the Porte.—Conferences for the purpose of reforming the Egyptian Government commenced.—Freycinet makes up a Cabinet of conciliation. General Boulanger takes portfolio for war. [General George Ernest Boulanger, the new War Minister of the De Freycinet Cabinet, is one of the youngest and most remarkable of the general officers of the French Army. Born in 1837, he entered Saint-Cyr in 1855, and left it on the 1st of October, 1856, with the grade of sous-lieutenant of infantry. Decorated after Magenta, he served in China as lieutenant, and received a very serious wound, which has never been well cured. He was promoted to a captaincy in 1862, and became chief of battalion (major) in 1870, and lieutenant-colonel on the 9th of November in the same year. Wounded at the head of his regiment at the first affair at Campigny, he assisted none the less at the second battle on the 2d of December. He was made a colonel, and received the rosette of the Legion of Honor, which, on the 24th of June, 1871, was changed into the badge of a commander. In May, 1880, when but little over forty-three years of age, he was made a brigadier-general. General Boulanger was chief of the French military mission to the United States on the occasion of the Yorktown Centennial celebration in October, 1881. Later he was appointed commander of the French division of occupation in Tunis.] Charles de Lesseps and a party of engineers start from France for Panama.—A departure in the history of the Catholic Church in Spain marked by the manifesto issued by the Spanish Bishops, wherein they take a bold step in the direction of the severance of their religion from politics.—Mr. Gladstone promises the Liberal members of Parliament an immediate frank statement of his proposition for the settlement of the Irish question. Mr. Parnell maintains a masterly reticence, with his small but well-organized force in readiness to take strategical advantage of the situation as developed by the Queen's speech and Lord Salisbury's reply.

January 11.—Dakota asks to be admitted to the Union as a State. A city ordnance passed at San Francisco making it a misdemeanor with heavy penalty to hold sand-lot meetings.—The king of Bavaria's probable morganatic marriage announced to the young and beautiful widow of a Nurenburg carriage maker.—The quiet in the Balkans, under the armistice, unbroken, save for a statement to the effect that Servia is assuming an attitude of presumption towards her conquerors.

January 12.—The Senate promptly passes Mr. Edmund's Bill for winding up the affairs of the Church of Latter-day Saints. The Act annuls all Territorial laws designed to bolster the Mormon iniquity, including that which permits women to vote; and declares all marriages between persons within, and not including, the fourth degree of consanguinity, to be incestuous. The Presidental Succession Bill passed by the Senate.—The British Parliament opened.—The Powers summon Servia, Bulgaria, and Greece, to disarm.—France proposes to hold a great exhibition in 1889.

January 13.—Dr. Daniel G. Brinton announced as laureate of the Société Américaine de France for 1885. The first American thus honored. President Grévy signs a decree granting amnesty to persons convicted of political offences since 1870.—The Japanese Government sends Vassar College a pair of bronze vases handsomely ornamented with inlaid decorations in gold and silver, in appreciation of the education given to two Japanese girls.—A party of travelers go from San Francisco to London within fourteen days—the quickest time on record.—The agitation in favor of a bimetallic standard of currency in Germany attains great proportions. Two hundred petitions from farmers' and peasants' unions demanding the restoration of silver, presented to the Reichstag.—The Australian harvest over. Ninety thousand tons of wheat available for export.—A severe engagement takes place between a body of Russian troops and a body of Persian troops.—Russia asks the Vatican to reopen the negotiations for closer relationship.

January 14.—The Emperor William opens the Prussian Diet.

January 15.—The bill regulating the Presidential succession passes the House.

January 16.—Thirteen Mormon workmen meet instant death at a mine at Evanstown, Wyoming.—The London Chamber of Commerce petitions the Indian Office to facilitate the establishment of railroad communication between Burmah and China. The British Government approves the proposal to appoint a special committee of the House of Commons to consider means for the improvement of the Mail service between Canada and the United States.

January 17.—The Pope complains of the conduct of the government of France towards the Church.—The Greeks clamor for extension of territory or for war.—Arrests of persons suspected of complicity in the late abortive revolutionist demonstration at Carthagena continue in various parts of Spain.

January 18.—Germany seizes the Islands of Samoa, about half way between San Francisco and Australia. The islands, which are eight in number, have a constitutional form of government, and contain an aggregate of 35,000 inhabitants.

January 19.—New York begins to grow uneasy in regard to the Broadway surface road franchise. The workingmen assemble in council at Albany.—Prince Napoleon undergoes a surgical operation for the removal of a tumor on the cheek. The French Government creates traveling juries. In the organic law of the Institut it is to select yearly ten citizens to travel abroad and collect information useful to science, commerce, and agriculture. These scientific travelers will not be appointed by the Academy of Sciences or the whole Institut, but by a special administrative commission, on the basis of a competitive examination.—The Bavarian Secretary of State presents a memorial to the King, stating that the ministry will endeavor to regulate his Majesty's finances, on the condition that it be empowered to control his future expenditures.

January 20.—The migration of negroes from North and South Carolina to Arkansas attracts attention.—Proposed in France to tax all foreign residents in that republic eighteen francs per annum. It is announced that less than one-third of the earth and *débris* that cover the ruins of Pompeii has been removed to date. The Carlists decide to abandon for the present their preparations for a rising in Spain. Rumors are rife that Russia is preparing for war. The Prince of Wales opens the new Mersey tunnel at Liverpool. A Bengal native Regiment sent to reinforce the British troops at Mandalay.—Herr Kopp, Roman Catholic bishop of Fulda, appointed a member of the Upper House of the Prussian Landtag by the Emperor William.

January 21.—Queen Victoria opens Parliament in person. Her Majesty's speech considered very unsatisfactory by the Parnellites. The British troops successful in a skirmish at Burmah.—It is rumored that a revolutionary expedition against Spain is being prepared in France. The French flag hoisted over Sumatra, one of the Sunda Islands, hitherto under Dutch protection.

January 22.—Thirty-nine men entombed alive in the bottom of a shaft at Wheeling, West Virginia. Mr. and Mrs. Sloane propose to build and endow a maternity hospital in New York City.—Moukhtar Pasha proposes that the Turko-Egyptian army be organized for the protection of Egypt instead of the English army now in the country.—The Government of the Congo State asks Mr. Henry M. Stanley to renew his engagement with that State.—Prince Bismarck receives the

decoration of the Order of Christ. The badge worth $3,000. The first Protestant who has been thus honored.—The New Mexico Government enlisting Texas rangers to fight the Apaches.

January 23.—The police authorities in London take extraordinary precautions against dynamite. John Magee, who pleaded guilty to attempting to procure money from the Prince of Wales by threatening letters, sentenced to seven years' penal servitude. Farmers in Wales demand a permanent reduction of twenty-five per cent. in rents, fixity of tenure, and compensation for making improvements on their holdings.—M. de Lesseps remains a fortnight at Panama. Declares that his task there is a far easier one than was the construction of the Suez Canal, and says that the Panama Canal will be completed by the end of 1888.

January 24.—An immense flood in Los Angelos, Cal.—England informs Greece that she is prepared to send a fleet to prevent that power from attacking Turkey by sea.—A serious deficiency reported in the Italian Budget, attributed to cholera and the expenses attending the expedition to Massowah.

January 25.—The cholera appears at Trieste.—The Governor of Senegal telegraphs that he has completely defeated the False Prophet and driven him into the Niger country.—Greece completes her preparations for war and seeks a plausible pretext for a conflict.

January 26.—Thomas A. Edison invents a device for telegraphing to and from moving trains. It is not by means of induction from a wire running near the cars, but the message is made to jump from the tin roof of the cars to one of the ordinary wires strung on poles twenty-five to sixty feet away, whence it goes to its destination, and the message and the answer jump back across the chasm in the same way. The Pennsylvania Railroad Company organizes a relief department. The plan contemplates the establishment of a fund, through monthly contributions of members, for the support of employés in case of accident or death, and the assistance of their families, in sums ranging from $250 to $2,500 in case of death.—The Salisbury Government goes down with sensational suddenness; the immediate occasion of its overthrow being, not the Irish problem proper, but a lateral issue which did not involve the question of Imperial unity at all. The hazardous experiment having been tried of making a Cabinet question of Mr. Collings's agricultural amendment to the Queen's address, the Tories were defeated by an Irish-Liberal combination which gave the decisive vote of 329 in favor of the proposition to 250 against it.—The Greek fleet weighs anchor and goes out to sea.—Serious floods prevail in the south of France.—It is rumored that the Duke of Braganza, heir to the throne of Portugal, will marry the eldest daughter of the Comte de Paris.

January 27.—A bill introduced in the Senate provides that Indians shall be eligible to appointment as postmaster, mail agent, postal clerk, deputy collector of internal revenue, deputy marshal, Indian agent, or Indian inspector, or to any other office relating to the conduct of Indian affairs or to the government of any Indian tribe or nation. Mrs. Grant receives her first check from the publishers of General Grant's memoirs for $250,000—probably the largest sum ever paid at one time for literary work. The next largest check may have been that paid to Macaulay—a hundred and fifty thousand copies of his wonderful history having sold within four weeks. The Pan Electric Telephone Company scandal brought to light.—The British Conservative Ministry resign office. Mr. Parnell spoken of as Chief Secretary for Ireland. The British Mediterranean fleet ordered to rendezvous at Suda Bay, Crete.—The Turks and Bulgarians fraternize.—A great strike of iron workers takes place in France. Troops called to quell the disturbance and several rioters killed.

January 28.—Capt. Crawford, U. S. A., fired upon by Mexicans in Sonora and killed.—Prince Bismarck in the Prussian Landtag urges the expulsion of the Poles from Germany, proposing to buy out all the real estate owned by Polish nobles in Prussian Poland at a cost of $75,000,000.—A skirmish between Greeks and Turks takes place at Lasora, on the frontier of Epyrus.—M. de Lesseps leaves Paris for Panama, saying, "I will be back in 60 days, I cannot die before opening the canal."

January 29.—The admission of Dakota as a State under debate.—Mr. Gladstone summoned by the Queen to form a cabinet. The commander of the English Mediterranean Squadron instructed to employ force against the Greeks whenever they attack the Turks.—Police authorities raid a house in St. Petersburg and arrest 23 Nihilists.

January 30.—Enormous rascality developed in the theft of land in Utah.—Copyright question before a committee at Washington. Two ocean steamers the "Servia" and "Nordland" collide on the Hudson. The alumni of Vassar College impeach its sectarian government. Representatives of the New England fisheries appear before the Senate Committee on Foreign Relations to argue against any new negotiations for the settlement of the fishery question. They claim to have all the rights they want in the privilege of fishing beyond the three-mile limit accorded by the Convention of 1818. Beyond that they only ask the protection afforded by the duty on fish which is revived by the abrogation of the Treaty of Washington.—A severe shock of earthquake experienced at Veley-Malaga, Spain.—The Mexican Government announces that it will immediately establish an agency in London for the registration and liquidation of Mexican Bonds.

January 31.—Chicago Anarchists issue a bloodthirsty circular.

February 1.—A successful test of the new invention by Thomas A. Edison for sending telegraphic messages from a car running at the rate of 25 miles an hour.—France gains great privileges in her treaty with Madagascar. General Boulanger leads an exciting debate in the Chamber of Deputies, Paris, on the necessity of crushing anti-republican intrigues.—Mr. Gladstone, at Osborne, receives the command of the Queen to form a cabinet.—An Italian version of a collection of poems written by Pope Leo XIII. published in Paris by the Abbé Brunelle.—The Vatican accepts Prussia's *modus vivendi* regarding the education of clergymen, subject to some minor modifications.

February 2.—Bills before the House Committee on Public Lands provide for the restoration to the public domain of 100,000,000 acres of land which have not been actually earned by the railroads to which they were given by Congress within the time specified in the law.—Engineers survey the proposed railway route from Winnipeg to Hundson's Bay and report that the line will be entirely practical, and not likely to cost over $8,000,000.—Mr. Gladstone's daughter marries. The lads on the British reformatory ship "Clarence" mutiny.—The Polish policy of Prince Bismarck produces great excitement throughout Germany and Austria.

February 3.—The New York surface car drivers go on strike. Terrific explosion of blasting powder at the new aqueduct, New York.—A snow storm in Mexico. Snow four inches deep near the capital—the first in thirty years.—An officer and five men attached to the Austrian war-ship "Donau" lost in the North River, New York.—Mr. Gladstone officially announces his cabinet. The Dacoits defeated by the British in Burmah with heavy loss.—Great strike of French weavers. The agreement between France and Germany regarding their respective possessions on the west coast of Africa and in the South Sea settled by the Reichstag.—A revolution in Spain feared.—His holiness the Pope has a slight attack of syncope.

February 4.—Florida land-swindles shown up by the public press. Mr. George L. Lorillard, of New York city, dies at Nice, France. [Mr. Lorillard was widely known in this country as a yachtsman, a turfman, and a patron of all outdoor sports.] A war of cable-rates threatened.—The principal landlords in Wales combine to resist the Farmer's League for a reduction of 25 per cent. in farm rents. The Earl of Aberdeen appointed Lord Lieutenant of Ireland. Mr. John Morley Chief Secretary.—Italy will accept Spain as arbiter between the United States of Colombia and Italy over the arrest of an Italian subject.—The Servian government orders all merchants and manufacturers under forty years of age to join the active army of Servia.—The Porte supports the demands of Bulgaria for a war indemnity from Servia.

February 5.—It is considered inopportune by the Extreme Left in the Chamber of Deputies to bring forward a measure for the expulsion of the Orleans Princes.

February 6.—The inquiry into the Broadway surface road robbery begins.—Representatives of Turkey and Bulgaria sign the agreement relative to the Bulgarian union. The treaty confirms Prince Alexander's appointment as permanent Governor, provides for mutual help to repel foreign invasion, and gives Turkey control over certain Mussulman villages in Roumelia.—A revolution fermenting in Turkish Armenia.—The striking factory operatives at Saint Quentin, France, erect barricades and seem desirous of coming in conflict with the military.

February 7.—The Northwestern States visited by another blizzard. At St. Paul the thermometer registers 36° below zero, in Northern Michigan 40° below.—Excavations made by the English at Tel-el-Kebir, in Egypt, bring to light the remains of a city and traces of the bricks without straw with which the Israelites were obliged to build during their bondage in Egypt.—The commerce committee of the French Chamber of Deputies resolves to ask the government to continue to prohibit the importation of American pork.—Several deaths of cholera reported at Terifa, Spain.—Greece informs the Porte that she has no intention to attack Turkey.

February 9.—Major-General Winfield Scott Hancock died, aged 62. [Born in Montgomery Co., Pa., Feb. 14, 1824; graduated from West Point in 1844. He served in the Mexican war, and was present at San Antonio, Cherubusco, Contreras, Molino del Rey, and the capture of the city of Mexico. For gallantry at Cherubusco and Contreras he was promoted. In 1861 he was made brigadier-general of volunteers, and was from that time until the termination of the war connected with the Army of the Potomac. He rendered gallant and valuable services at the siege of Yorktown and the battles of Golding's Farm, Garnett's Hill, Savage's Station, White Oak Swamp, Crampton's Pass, South Mountain, and Antietam; and in 1862 he was made major-general U.S. Volunteers. He commanded a division at Fredericksburg and Chancellorsville, and rendered gallant service at Gettysburg, where he was severely wounded at the very moment of victory. Here he commanded the left centre, and repulsed the final and grand assault of Lee on the third day of battle. Recovering from his wound, he was present at the Wilderness, Spottsylvania, and the assault upon Petersburg. He also commanded the Union forces at Deep Bottom and Ream's Station. Held the post of commander of the Eastern division of the U.S. army, headquarters at Governor's Island, till his death. In 1880 he was nominated for the presidency by the Democratic party, but was defeated.] Over 1,000 private Pension Bills already introduced in the House. The Commissioner of Pensions estimates that it will take $52,000,000 to meet the claims for pensions on account of the Mexican War. Serious trouble by strikers in the Pennsylvania coke regions. An ice-blockade on the Long Island Sound.—A socialist riot in London; houses wrecked and shops pillaged.—The art treasures of the late King of Portugal announced for sale in Paris.

February 10.—Archbishop Gibbons of Baltimore receives the announcement that a Cardinal's hat will be conferred upon him. General Hancock interred at Norristown, Pa. Ex-Governor Horatio Seymour failing rapidly.—The Right Hon. Mr. Forster, for some time Chief Secretary for Ireland, reported dying. The English government intends to prosecute the more violent of the Socialist speakers. Mr. Parnell carries the Galway election. London greatly scared over a report of the rising of Socialists. A meeting of Englishmen and Scotchmen in favor of Irish Home Rule held in London, Lord Ashburnam presiding.—The strike of factory operatives at St. Quentin ended.—The site of the Roman arena in Paris reveals indications of the use of water to flood the arena for the purpose of water sports and sham naval battles. Fragments of seats, with the names of their holders engraved on them, found, and a woman's head in stone, with a fillet of bay-leaves about it.—Herr Halbherr, explorer of the Island of Crete for Italy, finds in the inscriptions first seen on the foundations of a mill at Gortyna, Crete, the lost laws of Minos.

February 11.—Mr. Garland surrenders his Pan Electric stock. The Chinese on the Pacific coast subjected to an organized boycott, carried on with systematized vigor. The House of Representatives passes the Bill increasing pension of widows and dependent survivors of Union soldiers from $8 to $12 a month.—The emperor of China formally invites the Pope to open direct relations between the Holy See and the Chinese Empire by the establishment of a Papal Embassy at Pekin.—A mob riot in Leicester, England. The police overpowered. Mr. Gladstone is reported as preparing a bill providing for the expropriation of land in Ireland by means of State funds. The Marquis of Lorne accepts the position of Honorary Commissioner for Canada at the coming Colonial exhibition.—Captain Saraw found guilty of having furnished plans and information regarding German fortifications and armaments to the French military authorities.—King Milan summons the entire Servian army to enter the field fully equipped for war for a drill of six weeks.

February 12.—A fund inaugurated for General Hancock's widow. Great floods in New Jersey. Horatio Seymour dies, aged 75. [Born at Pompey, Onondaga Co., N. Y., May 31, 1810. He was admitted to the bar in 1832, and in 1841 was elected to the State Assembly as a Democrat. He was elected Governor of the State in 1853; but failed of re-election in 1855, on account of vetoing a prohibitory liquor law. He was re-elected in 1862. In 1868 he was nominated for the presidency, but was defeated, and thereafter did not take a very active part in politics.]—The French Chamber of Deputies vote that the crown jewels shall be sold to provide a fund for aged workmen. The jewels estimated to be worth $40,000,000. Some that are of historic interest will go to the Louvre collection. The gems of artistic and educational interest, valued at 13,000,000 francs, will be handed to the Museum and School of Mines. The imperial crown swords that belonged to Louis XVIII. and the Dauphin will be melted in order to prevent the possibility of their falling into the hands of showmen.—The abdication of the Queen of Spain rumored.

February 13.—Great floods reported all over the United States. Ex-President Arthur seriously ill. The United States Senate passes the Bill to open to settlement 11,000,000 acres of the Sioux reservation in Dakota. The reservation comprises 33,000 square miles, is four times as large as the State of Massachusetts, and "is as fine a country." The House Military Committee agrees to a Bill for the protection of the people of Arizona and New Mexico. It provides for raising one regiment of volunteer cavalry in each Territory for one year's service, to be composed of and officered by actual residents of the Territories named.—Dissensions in Mr. Gladstone's Cabinet rife.—The Irish Loyalists propose to arm in defense of the Union.—Germany mediates between Russia and Bulgaria.

February 14.—Two square miles of Boston, Mass., under water. Chicago Socialists endorse the London rioters. Ex-Governor Seymour interred.—Bismarck's Polish policy bitterly opposed.—Banquet to Mr. Morley, Chief Secretary for Ireland, in the Dublin Mansion House, boycotted.—Nine dynamiters arrested in Madrid, Spain.—Russia renews negotiations with England to induce her to join the International League for the extradition of political criminals.

February 15.—Mr. Gladstone announces that he will give precedence to home rule in Parliament.—France supports the demands of the Porte for the formation of a Turco-Egyptian army to replace the British troops in Egypt.—Bismarck practically repeals the May Laws in order to conciliate the Vatican.—It is decided by the English government to garrison Burmah with 16,000 troops.

February 16.—The postmasters national convention meets in Chicago.—A new war cloud in the Balkan peninsula appears in the horizon.—A series of stringent measures against the German residents of Russian Poland commenced.—Ex-Queen Isabella of Spain becomes reconciled to her husband Francois.—France informs England that she has instructed her minister at Cairo to support the demands of Moukhtar Pasha that the English evacuate Egypt, and that the British force there be replaced by a Turco-Egyptian army.—The Papal secretary of state sends a note to the Prussian minister to the Vatican accepting the principle of the new Prussian Religious Bill.—Bismarck sends a note to the Greek government insisting on the disarmament of Greece.

February 17.—The Southern strike extends; the governor of Louisiana appealed to for State troops. A Philadelphia syndicate offers to purchase a controlling interest in the Broadway surface railroad. Virginia's public debt to be adjusted by a commission of three. The Western Union Telegraph Company refuses to pay taxes.—Mr. Joseph Chamberlain, president of the local government board, quarrels with Mr. Gladstone on the Greek policy of the government.

Trial of the London Socialists commences. A mutiny on board the British naval training-ship "Arethusa."

February 18.—John B. Gough, the distinguished temperance advocate, dies in Philadelphia. [John B. Gough was born in Sandgate, Kent, England, of very poor parents, in 1817. He came to America when twelve years old, and it was not until 1842 that he began his work as a temperance advocate. In the interim he had worked as a bookbinder for $2.25 per week in New York; had sung and acted in low theatres there and in Boston; had seen his mother buried in the Potter's Field in New York, and had fallen into the depths of intemperance and degradation. He was induced to sign the pledge at a temperance meeting in Worcester, Mass., in 1842. He first spoke as a reformed drunkard. His speeches soon drew him large audiences, and he lectured successfully in Boston, New York, and Philadelphia. In 1853 he went to England, and again in 1857 and 1878, staying once three years and making 1,260 speeches in all. He has delivered nearly 10,000 addresses and traveled hundreds of thousands of miles in the cause of temperance, and spoken before more persons than any one man now living.] A World's fair for New York proposed. Mr. John Kelly (Boss) pronounced hopelessly ill. The war on the Trans-continental commences. A cut from 30 to 50 per cent. on the Union Pacific. The Chicago picture "Origin of the Book," by Raphael, proves to be a fraud. The consideration of the Fitz John Porter Bill resumed.—The Home Rule question postponed in the British Parliament until March 22. The Womans' Franchise Bill read a second time.—Von Moltke suffers gastritis.—Professor Nichol of the University of Glasgow arrested in Naples for carrying a sword-stick.—England will act in concert with the other powers in relation to the Greek fleet.—Prince Alexander arrives at Philippopolis as ruler of Eastern Roumelia.—The project of recruiting a Hungarian legion for service in the Servian army prohibited.

February 19.—Mr. Evarts in the Senate makes a strong plea for education in the South.—Sir Charles Dilke will not resign his seat in the House of Commons.—Servia negotiates with Turkey in favor of a union with Bosnia.—The Portuguese Ministry resigns.—Germany augments her torpedo armament in a greater ratio than either England or the United States.—The Crown Prince and Princess of Austria will visit England in the fall.

February 20.—The injustice of detaining debtors in Ludlow street jail exposed. Completion of the movement initiated by Miss Caldwell for building a Catholic University.—The Empress of Austria ordered to abandon her equestrian and sword exercises on account of ill health.—The Earl of Aberdeen, Lord Lieutenant of Ireland, makes his state entry into Dublin.—The French Government decides to hold a universal international exhibition in Paris in 1889.

February 21.—An immense fire at Wilmington, N. C. Pierre Lorillard sells off his magnificent stud of horses.—Ex-President Soto, of Honduras, refuses to be identified with the filibusters of the City of Mexico.—Food riots in Quebec by starving fishermen.—The English Socialists meet in Hyde Park, London, 50,000 strong.—It is reported that a plot exists to unite Spain and Portugal under the Duke of Braganza, and to overthrow the present Regency in Spain.—Thirty thousand persons apply to the London Mansion House for relief.—The Powers send a final note to Greece before blockading the Greek fleet in the bay of Salamis.

February 22.—Austria declares herself anxious for peace.—Nine hundred convicts in the central prison at Thouars revolt and master the guards; the troops succeed in suppressing them.—The German Ambassador recommends a German protectorate of the Marshal, Providence and Brown Islands.—The Balkan peace conference adjourns.—Lord Randolph Churchill works up a loyalist boom in the north of Ireland.—Archbishop Walsh, of Dublin, on the part of the Irish Bishops, endorses Mr. Gladstone.—Mr. Gladstone announces that the government does not intend to suppress the Irish National League. The police department of London to be re-organized.—The Berlin Mint turns out silver for Egypt.—Outbreak of smallpox at Buda-Pesth.—Greece anxious for hostilities.

February 23.—The Fire Insurance Convention takes place at St. Louis.—Greece formally submits.

February 24.—A special committee to investigate the Pan Electric. The House Committee on Commerce practically adopts the Ship Railway Bill of Captain Eads. The weather clerks hold a convention in Washington.—It is reported that the first outline of Mr. Gladstone's Irish proposals has been presented to the Cabinet, and that the Premier goes the whole length of restoring the Irish Parliament.

February 25.—An international movement in the interest of laboring-men proposed for Europe. A water famine in Vienna.

February 26.—A wind storm traveling at the rate of 84 miles an hour passes over New York, followed by a blizzard.—The screw makers of Birmingham on strike. A famine on the west coast of Ireland reported.

February 27.—The Municipality of Paris orders the name of the Deity to be expunged from children's books issued by the Metropolitan school committee. The treaty of peace between France and Madagascar ratified by the Chamber of Deputies.—Brazil borrows $30,000,000.

February 28.—An Anti-Poligamy Bill to be introduced into Congress.—The marriage of the Archduchess Maria of Tuscany to the Archduke Karl Stephan, brother of the Queen-Regent of Spain, is solemnized at Vienna.

March 1.—The President replies to the Senate touching his rights and powers.—Sir Alexander Stewart, ex-Premier of South Wales, visits the United States via San Francisco.—The wife of Minister Phelps specially received by the Queen at Windsor.—Forty laborers a day die on the Isthmus of Panama.

March 2.—The President recommends an appropriation to indemnify the Chinese for losses sustained at the Rocks Springs Massacre. A great car-driver's strike in New York.—Pope Leo celebrates the seventy-fifth anniversary of his birth and the eighth anniversary of his coronation.—An American bark looted on the Island of Madagascar.—The creditors of King Ludwig, of Bavaria, begin to make life a burden to the great spendthrift.

March 3.—General Terry succeeds the late General Hancock in the department of the Atlantic. The filibustering steamer "City of Mexico" captured.

March 4.—Archbishop Corrigan invested with the Palium at St. Patrick's Cathedral, New York. A great surface car strike in New York and Brooklyn.—The British Government telegraphs Lord Dufferin to definitely annex Burmah.—The French Chamber of Deputies reject a motion for the immediate expulsion of the French princes from France.

March 5.—Great strike on the Texan-Pacific railroad.—Mr. Labouchere moves the virtual abolition of the House of Lords. His motion rejected by a vote of 202 to 166.

March 6.—A million dollar fire in Akron, O. The Kentucky militia called out to suppress mining troubles in Kentucky.—Parnellites understood to be willing to agree with Mr. Gladstone.—Germany claims that boys are being inoculated in Alsace-Lorraine with the idea of revenge.—The Infanta Eulalia, sister of the late king of Spain, Alfonso, married in Madrid to Prince Antonio, son of the Duc de Montpensier, and brother of the Comtesse de Paris. Ex-Queen Isabella and her consort, Don Francisco, prove their reconciliation by jointly giving away their daughter. Mr. Henry M. Stanley seriously ill.

March 7.—The British foreign secretary consents to make room for a number of Turkish officers in the Egyptian army by displacing British officers.

March 8.—Ten thousand soft coal miners in the east quit work. Senator Miller, chairman of the committee on foreign relations, dies. The celebrated "Peach Blow" vase sells for $18,000 at the Morgan sale.—Mr. Gladstone confined to his room.

March 9.—A brilliant Mardigras at New Orleans.—Greece refuses to disarm in spite of the naval demonstration.

March 10.—The great strike continues at St. Louis.—Fatal railway collision between Monte Carlo and Mentone; twenty persons killed.

March 11.—A steamer blows up on the Mississippi. A savings bank at New Brunswick, New Jersey, wrecked. Freight begins to move again over the South Western lines. Princess Hellene de Ypsilante declared a bankrupt. —German to be studied in the Austrian-Hungarian army. —The Pope sends a special letter to Bismarck, thanking him for his eulogistic references to His Holiness at the recent German parliamentary dinner.

March 12.—The murderers Ford and Murphy, New Orleans, poison themselves in their cells. Bill passes the House for the pension to the widow of the late General Hancock.—The committee of the Reichstag practically reject Bismarck's Spirit Monopoly Bill.

March 13.—The question of Sunday theatrical performances at Cincinnati causes considerable agitation.—Mexico aroused to the demand of the United States for redress for the death of Captain Crawford.

March 14.—The Cunard S.S. "Oregon" run down by a schooner off the Long Island coast. Washington, D. C., spoken with over telephone-wire.

March 15.—Richard Bell, the English sculptor, found guilty of misdemeanor, for having obtained money under false pretences, and sentenced to a year's imprisonment with hard labor.

March 16.—Mrs. Bancroft, wife of the venerable historian, dies. Ex-President Arthur better. 28,000 miners quit work in the bituminous coal regions, Pennsylvania.—Mr. Joseph Chamberlain, President of the Local Government Board, and Mr. George Trevelyan, Secretary for Scotland, place their resignations in the hands of Mr. Gladstone.—The Reichstag totally rejects Bismarck's Spirit Monopoly Bill.

March 17.—St. Patrick's Day celebrated with the utmost eclat all over the United States.

March 18.—The perfected Franchise Bill carried through at Albany. Abigail Bates, who with her sister frightened away a British warship by sounding fife and drum in 1812, dies, aged 89. President Cleveland, 49 years of age. Great strike coming to an end.—The Czar objects to Prince Alexander being a life-governor of Roumelia.—Russian petroleum-fields on the west coast of the Caspian Sea developed.

March 19.—Alarming fires in the oil region.—The German newspapers discuss the prospect of a war of retaliation by France.

March 21.—The Railway Franchise Bill becomes a law of the State.

March 22.—Oil fields discovered in Upper Egypt.—Emperor William celebrates his 89th birthday in excellent health.

March 23.—State troops ordered to drill nightly at Kansas City, to be prepared for the strikers. The police of Chicago discover a dynamite arsenal.—The first steamer lighted by electricity passes through the Suez Canal.—M. de Lesseps arrives in Paris after his trip to Panama.

March 24.—Queen Victoria startled; a crank throws a petition into her carriage.—The Indian financial statement for 1885 shows a deficit of £386,440.

March 25.—Mr. Gladstone will detail his Irish plan on April 8. The Countess de Chambord dies.

March 27.—Secretary Manning struck with paralysis.

March 28.—Mr. Jay Gould agrees to the plan of arbitration in the strike question. Yellowstone Park to be leased to a new syndicate.—Prince Alexander about to make his army proclaim him King of United Bulgaria.—The Portuguese Government issues a decree authorizing the free exportation of gold and silver coins.

March 29.—A hitch in the negotiations for a peaceful settlement of the strike.—Mr. Parnell denies that he has been quasi-officially informed of the progress of Irish matters in the Cabinet.

March 30.—Jefferson Davis, ex-President of the Confederacy, names April 28th as the date of his lecture at Montgomery, Alabama, in aid of the monument for the Confederate dead. The body of Capt. Crawford recovered and embalmed. —Key West, Fla., swept by fire, loss $1,500,000.—Emperor William gives audience to Dr. Kopp, Roman Catholic bishop of Fulda.

March 31.—The great strike over.—The Bill enfranchising the police passes its second reading in the British House of Commons.

April 1.—Furious spring freshets in New England and the south.—The Czar of Russia and his Court start for the Crimea, the route guarded by one hundred thousand men.—Bismarck celebrates his seventy-first birthday.

April 2.—Many Southern towns under water.—A mass meeting in London protests against granting a Parliament to Ireland.—The German Reichstag decides in favor of prolonging the anti-Socialist law.

April 3.—Great floods in the West and South. A strikers riot at Fort Worth, Texas. The Western Union Telegraph Co. sued for $2,000,000. The House passes the Labor Arbitration bill.—The opposition to Home Rule increases in England.—A report that Bismarck decides to withdraw the concessions made to the Vatican.

April 4.—The Knights of Labor hold a conference at St. Louis. Rioting in Fort Worth continues.

April 5.—The floods in the South subside. Fort Worth patrolled by 400 Texan militia men. The House passes the Mexican pension bill for the survivors of the war of '47.—The Right Hon. William E. Forster (Buckshot) dies, aged 68. [Mr. Forster was Under Secretary for the Colonies from 1865 to 1868, in Lord Russell's administration; a member of the Privy Council in 1868, and of the Cabinet in 1870. He was prime mover in the passage of the Educational bill in 1870, and the Ballot bill in 1872. On Mr. Gladstone's retirement in 1875 Mr. Forster might have led the Liberal party, but declined through fear of proper support. When the Beaconsfield Parliament was prorogued in 1880 Mr. Forster returned to power as Chief Secretary for Ireland under Gladstone. Mr. Forster was undoubtedly a well-hated man, his nickname, "Buckshot" Forster, being bestowed upon him during the heat of the Irish troubles connected with the suppression of the Land League, Mr. Forster having advocated the substitution of buckshot cartridges for the usual ball cartridges used by the Irish constabulary.]—Ten thousand operatives on strike in Belgium.—The Reichstag adopts the treaty between Germany and Zanzibar.

April 6.—The Knights of Labor declare war on Jay Gould. A great fire at La Cross, Wisconsin.—The Abbe Liszt conducts his Oratorio of St. Elizabeth in London.—Cholera appears in the south of France.

April 7.—A mob riot in East St. Louis. Senator Logan's Army bill defeated. A terrible railway accident on the Fitchburg railroad, Massachusetts.

April 8.—Severe rioting in Laredo, Texas. Fire in the Philadelphia Academy of Fine Arts; 45 pictures destroyed.—Mr. Gladstone unfolds his scheme in the House of Commons: a severance of Parliament, but no repeal of the Union. Irish representatives no longer to sit in Westminster. Intense excitement in the House.

April 9.—An anti-railway mob fired into at East St. Louis.—Mr. Chamberlain opposes Mr. Gladstone's scheme for Home Rule.

April 11.—The militia supports the sheriff's authority in East St. Louis.—Lord Wolseley opposed to the Home Rule measure.—Grecian deputies clamor for war.

April 12.—Boston indorses Gladstone's scheme. Strikers go to work. Major-General Schofield assumes General Hancock's command.—Conservatives attack Mr. Gladstone's plans for Ireland.

April 13.—Rumor started of President Cleveland's engagement to Miss Frances Folsom.

April 14.—Rhode Island indorses Home Rule. John H. Noyes, founder of the Oneida community, dies.—Mr. Gladstone fights for time in order to rally his followers.

April 15.—The Porte notified by Russia, Germany, and Austria, that they are taking steps to make Greece disarm.

April 16.—The four sons of the late W. H. Vanderbilt endow a free dispensary. Free ports for American vessels in Canada demanded of Great Britain. Great strike of the Third Avenue surface railroad of New York.—Mr. Gladstone unfolds his Land Purchase Bill in the British House of Commons: £50,000,000 three per cent. stock issued at par to buy out the landlords; twenty years to be a normal purchase.

April 17.—An abnormal flood in the river St. Lawrence, great destruction of property.—Bismarck denies that he is an enemy of the Poles.—Lord Hartington is hostile to Gladstone's scheme.

April 19.—The Seventh Regiment visits Washington, D. C. Ex-President Arthur reported at death's door.

April 21.—Charles E. Loew, a prominent New York citizen, dies.—A conflict on the Greek frontier hourly expected.—The British defeated in Burmah.—A missing Chapter-house in Christ Church, Dublin, discovered.—The Duke of Sutherland with a large party visits New York.

April 22.—Riots at the sugar refineries at Greenpoint, L. I. The last stone laid of the Statue of Liberty's pedestal.—The judgment of the Court in the "Oregon" inquiry case is in favor of the owners and officers. A great Home Rule meeting in London.

April 23.—The Lake Shore strike over. The largest grain fleet ever afloat on the great lakes leaves Chicago.

April 24.—An attempt made to blow up London Bridge. Orange and Catholic roughs come into collision at Glasgow. It is believed that Greece will disarm.

April 26.—The Wabash, St. Louis and Pacific railroad sold.—Lord Hartington endeavors to create an independent party. The formation of a supreme and permanent commission for the settlement of fisheries disputes between Canada and the United States advocated in London.

April 27.—Jefferson Davis, ex-President of the Confederacy, visits Montgomery, Alabama.—Emperor William sends a jeweled cross to the Pope as a souvenir of German gratitude for the friendly offices rendered by His Holiness in arbitrating the dispute between Germany and Spain, over their respective claims to the Caroline Islands.

April 28.—Jefferson Davis's visit to Montgomery causes considerable excitement in the South.—Bee, a German pretender to the Danish throne, arrives in Spain.

April 29.—Jefferson Davis dedicates a monument to the Confederate dead.—A political crisis supposed to be imminent in Spain.

April 30.—Ironclads carry the day. Greece bows to the will of the Powers.—Large quantities of ice on the routes of ocean steamers.—Canada enforces her fishery laws and orders off four American fishing schooners at St. Andrews, in the bay of Fundy.

May 1.—Thirty thousand working men demand shorter hours of labor in New York. Jefferson Davis attends the unveiling of Senator Hill's statue at Atlanta, Ga. Bishop Robertson of the Episcopal Church dies at Philadelphia.

May 2.—Prussia issues orders to the police to interfere in all cases of strikes.

May 3.—End of the big strike at St. Louis. Rioting in Chicago. Six thousand strikers storm the McCormack Reaper Works. Anarchists incite them to violence. The Chatham Artillery celebrates its Centennial anniversary at Savannah, Ga.—Mr. Gladstone issues an address to Midlothian.

May 4.—Chicago anarchists fight the police with bombs. A mob of fiends dispersed by pistol volleys. A riot at Milwaukee suppressed. Herr Most and anarchists on trial at New York.

May 5.—Twenty-six men buried under a falling building at Minneapolis. Socialists shot down at a riot at Milwaukee by the militia. The police finally repress the bloody anarchists at Chicago.—Mr. Gladstone's policy endorsed by the National Liberal Federation.

May 6.—Arms and dynamite found in Chicago in the haunts of the Anarchists. The Governor of Wisconsin tames the Anarchists at Milwaukee.

May 7.—A mass-meeting at the Academy of Music, New York, endorses Gladstone's policy.—Henry Rochefort fights a duel in Paris.—The Lower House of the Prussian Landtag adopts the Ecclesiastical Bill in its entirety.

May 8.—It is rumored that Lord Wolseley threatens to head the Ulster men in case of rebellion.—Emperor William of Germany buys for 5,000 dollars the original manuscript of the "Watch on the Rhine."

May 9.—Third Avenue, New York, long strike still continues. Chicago again quiet.—Oliver Wendell Holmes receives an enthusiastic reception at Liverpool.

May 10.—Alderman Jaehne's trial commences.—England concludes a commercial treaty with Spain.

May 11.—A tornado in Kansas City, Mo. A tornado near Pittsburg, Pa. The hotelmen meet in convention at New York.—Belfast papers advertise for 20,000 Schneider rifles. The English press declares that Gladstone is riding for a fall. Queen Victoria arrives at Liverpool for the purpose of opening the Liverpool National Exhibition.

May 12.—Tornadoes visit Illinois and Indiana. Herr Most, the Anarchist, is sent to the Tombs.

May 13.—A lively debate in the House of Commons on Home Rule; more deserters; arming and drilling goes on in Armagh.—Serious forest fires rage in Mexico.—Notice served on Canada that damage for the detention of the schooner "Adams" will be demanded.

May 14.—The bomb-throwing anarchists of Chicago caught. Both Governments await official reports on the seizure of the "Adams."—A shock of earthquake felt in Scotland.

May 15.—Alderman Jaehne convicted. A sub-treasury to be established at Louisville, Ky.—Dr. Holmes receives the warmest reception ever extended to any American across the Atlantic.

May 16.—Nationalists and Orangemen have a free fight in Tyrone.

May 17.—The largest aerolite on record, 200 tons, found at Washington County, Pa.; its composition is chromium, nickel, albumin, copper, magnesium, and tin. The American schooner "Ella Doughty" captured by the Dominion authorities at Englishtown for buying bait at that port.—Queen Marie Christina presents an heir to the Spanish throne.

May 18.—Maxwell confesses to the killing and mutilation of Preller at St. Louis.—The Crown Prince of Portugal starts for the frontier to meet his betrothed, the Princess Amelie, daughter of the Comte de Paris.

May 19.—German traders massacred on the gold coast of West Africa.

May 20.—The wife of the U. S. Minister to Germany, Geo. H. Pendleton, accidentally killed in Central Park, N. Y. Miss Kate Stoneman admitted to practice as an attorney and counsellor-at-law, at the Empire bar, the first woman ever admitted to practice law in the State of New York. The President's bride-eleet losses her grandfather, Col. John B. Folsom. Alderman Jaehne sentenced to Sing Sing for a term of nine years and ten months.

May 21.—Secretary Bayard makes formal demand on Great Britain, to release fishing boats. Martin Irons threatened with hanging by a mob of angry strikers.

May 22.—Fears in Europe that Russia means to give trouble. —Don Carlos disputes the right of Alfonso XIII. to the Spanish throne.

May 23.—Serious fighting between Greeks and Turks along 15 miles of the Northeast frontier.—The fêtes in honor of the marriage of the Princess Marie Amelie d'Orleans, with the Duke of Braganza, hereditary Prince of Portugal, begin.—Von Ranke, the "Nestor" of German historians, dies.

May 24.—Portland officials seize a Nova Scotian schooner under American laws.

May 25.—Twenty thousand friends of Ireland attend a Home Rule meeting in Chicago.

May 26.—Eight anarchists indicted at Chicago.—The Lord Lieutenant of Ireland receives an enthusiastic reception at Cork.—The French Budget Committee decides by a vote of 12 to 9, to throw out the Public Worship estimate.

May 27.—Great explosion of dynamite on Tom's River, N. J. Congress adopts a Shipping Bill, arming the President with power to order tactics of commercial embargo.—The Great Liberal meeting called by Mr. Gladstone, takes place in London.—The French Government subjects its Expulsion bill to the Chamber of Deputies.

May 28.—The President's wedding is semi-officially announced for June 2. The Senate Commerce Committee recommends the Ship railway guarantee.—Important discovery of gold at Kimberley, Australia, is reported.—A new extradition treaty between England and America spoken of in the House of Commons.

May 29.—A great mass meeting held at New Orleans in favor of Home Rule.

May 30.—The President arrives in New York and meets his fiance.

May 31.—Decoration Day. General Grant's tomb on the Hudson the "Mecca" of Grand Army veterans.—The Colony of Victoria, Australia, joins the Copyright Convention.

June 1.—John Kelly, the great Tammany chieftain, dies. Mr. James G. Blaine makes a remarkable and brilliant speech on Home Rule.—England warned by Canada that the Dominion will resent dictation.

June 2.—President Grover Cleveland marries Miss Frances Folsom; a quiet wedding at the White House. Anarchist Most and his companions sent to prison.—Canada votes to strengthen her defences.

June 3.—The House passes the Oleomargarine Bill by 76 majority.

June 4.—Secretary Manning sends in his resignation.—Severe rioting in Belfast; 2,000 Orangemen attack 100 Catholic navvies.—The Marquis of Salisbury criticises the speech of Mr. Blaine.—The eruption of Mount Etna ceases.

June 5.—Imposing funeral of John Kelly at St. Patrick's Cathedral.

June 6.—A party of French railroad officials arrive in the United States for the purpose of inspecting American railways.

June 7.—Mr. Gladstone's Home Rule Bill defeated in the House of Commons by a majority of thirty votes.

June 8.—Mr. Gladstone's Cabinet votes unanimously to dissolve Parliament.

June 9.—Orange riots in Belfast; nine persons shot dead by the police, and many wounded. The Queen consents to the dissolution of Parliament; all parties prepare for a general election.

June 10.—Belfast under martial law. Lord Carnarvon, ex-Lord-Lieutenant of Ireland, admits having had an interview with Mr. Parnell, but denies that he compromised the Tory party in any way.—Violent earthquake at Talavera, New Zealand.—It is proposed to depose King Ludwig of Bavaria.

June 12.—Passaic, N. J., celebrates its bi-centennial.—The Bill providing for the expulsion of the French Princes introduced into the Senate.

June 14.—Prince Alexander opens the first Bulgarian-Roumelian assembly.—Queen Victoria offers the Comte de Paris the use of Claremont; the Comte declines with thanks.—King Ludwig of Bavaria commits suicide in Lake Starnberg; his medical attendant, Dr. Gudden, drowned with him.

June 15.—Mrs. Cleveland installed in the White House.—The Belfast Jury returns a verdict of willful murder against the police.

June 16.—The dead King of Bavaria lies in state.—2,500 Belgian miners on strike.—Nova Scotia votes for secession.

June 17.—Oliver Wendell Holmes receives an Honorary Degree from Cambridge University. A statue of Daniel Webster unveiled at Concord, N. H.

June 19.—Archibald Forbes, the famous war correspondent, married at Washington, D. C., to Miss Meiggs, daughter of the Quartermaster-General of the U. S. Army.—King Ludwig is royally interred. The Bavarian people deeply grieved at his loss. Bells to ring for six weeks throughout Bavaria as an act of mourning.

June 22.—The whole village of Potterville, N. J., poisoned by ice cream.—The French Senate passes the decree of exile on the French Princes.

June 23.—The French Princes receive an order to leave France.—Parnell telegraphs that an important delegation will attend the Chicago Convention.

June 24.—John Bright proclaims himself an enemy to Home Rule.—The Comte de Paris arrives in England as the Marquis of Harcourt.

June 25.—Serious strike on the Chicago end of the Lake Shore railway.—The Queen dissolves Parliament with this significant sentence: "In order to ascertain the sense of my people on the important proposal to establish a legislative body in Ireland for the management of Irish as distinguished from imperial affairs," which causes intense excitement.

June 26.—Ex-Vice-President David Davis dies at his home in Bloomington: President Lincoln's friend, Supreme Bench Justice, Senator, and "absolutely incorruptible."—The Rev. Henry Ward Beecher receives an enthusiastic welcome in England.

June 28.—Mr. Gladstone and the Rev. Mr. Beecher, two "grand old men," meet in Liverpool.

June 30.—Mexican bondholders meet in London, and denounce the Mexican Government for its dishonest treatment of its creditors. An explosion of sewer-gas in the House of Commons leads to a dynamite scare.—The Prussian Diet agrees to a motion extending the liberties of the Evangelical Church.

INDEX

OF MATTERS NOT HAVING SPECIAL ARTICLES.

It has been thought unnecessary to repeat in the Index the titles of the 27,000 articles composing the body of the work. Any person consulting the Encyclopædia is supposed, in the first instance, to look for the subject he is in quest of in its proper alphabetical place. If it is not to be found there, by turning to the Index he is likely to get a reference to it under another name, or as coming in for notice in connection with some other subject. It frequently happens that subjects, having articles of their own, are further noticed under other heads; and where it seemed of importance, a reference is given in the Index to this additional information. The title of the Article referred to is printed in *Italics*.
